RECEIVED

**Subject: South Maui Recycled Water System Expansion Project –
2nd 1.0 MG Tank and Pipeline Improvements, (Job No. WW15-01)**

Dear Mr. Glenn:

With this letter, the County of Maui, Wastewater Reclamation Division hereby transmits the final environmental assessment and finding of no significant impact (FEA-FONSI) for the South Maui Recycled Water System Expansion Project – 2nd 1.0 MG Tank and Pipeline Improvements, situated at 2-2-024:010 & 2-2-002:075, in the Makawao District, on the island of Maui, for publication in the next available edition of the Environmental Notice.

The County of Maui, Wastewater Reclamation Division has included copies of comments and responses that it received during the 30-day public comment period on the draft environmental assessment and anticipated finding of no significant impact (DEA-AFONSI) in the FEA-FONSI document.

Enclosed is a completed OEQC Publication Form, one copy of the FEA-FONSI, an Adobe Acrobat PDF file of the same, and an electronic copy of the publication form in MS Word.

If there are any questions, please contact Ms. Joanie Gushiken at (808) 270-1763 or joanie.gushiken@co.maui.hi.us.

Sincerely,

A handwritten signature in black ink, appearing to read "Stewart Stant".

Stewart Stant, Director
Department of Environmental Management

Status (select one) DEA-AFNSI**Submittal Requirements**

Submit 1) the proposing agency notice of determination/transmittal letter on agency letterhead, 2) this completed OEQC publication form as a Word file, 3) a hard copy of the DEA, and 4) a searchable PDF of the DEA; a 30-day comment period follows from the date of publication in the Notice.

 FEA-FONSI

Submit 1) the proposing agency notice of determination/transmittal letter on agency letterhead, 2) this completed OEQC publication form as a Word file, 3) a hard copy of the FEA, and 4) a searchable PDF of the FEA; no comment period follows from publication in the Notice.

 FEA-EISPN

Submit 1) the proposing agency notice of determination/transmittal letter on agency letterhead, 2) this completed OEQC publication form as a Word file, 3) a hard copy of the FEA, and 4) a searchable PDF of the FEA; a 30-day comment period follows from the date of publication in the Notice.

 Act 172-12 EISPN
("Direct to EIS")

Submit 1) the proposing agency notice of determination letter on agency letterhead and 2) this completed OEQC publication form as a Word file; no EA is required and a 30-day comment period follows from the date of publication in the Notice.

 DEIS

Submit 1) a transmittal letter to the OEQC and to the accepting authority, 2) this completed OEQC publication form as a Word file, 3) a hard copy of the DEIS, 4) a searchable PDF of the DEIS, and 5) a searchable PDF of the distribution list; a 45-day comment period follows from the date of publication in the Notice.

 FEIS

Submit 1) a transmittal letter to the OEQC and to the accepting authority, 2) this completed OEQC publication form as a Word file, 3) a hard copy of the FEIS, 4) a searchable PDF of the FEIS, and 5) a searchable PDF of the distribution list; no comment period follows from publication in the Notice.

 FEIS Acceptance
Determination

The accepting authority simultaneously transmits to both the OEQC and the proposing agency a letter of its determination of acceptance or nonacceptance (pursuant to Section 11-200-23, HAR) of the FEIS; no comment period ensues upon publication in the Notice.

 FEIS Statutory
Acceptance

Timely statutory acceptance of the FEIS under Section 343-5(c), HRS, is not applicable to agency actions.

 Supplemental EIS
Determination

The accepting authority simultaneously transmits its notice to both the proposing agency and the OEQC that it has reviewed (pursuant to Section 11-200-27, HAR) the previously accepted FEIS and determines that a supplemental EIS is or is not required; no EA is required and no comment period ensues upon publication in the Notice.

- Withdrawal Identify the specific document(s) to withdraw and explain in the project summary section.
- Other Contact the OEQC if your action is not one of the above items.

Project Summary

Provide a description of the proposed action and purpose and need in 200 words or less.

The County of Maui, Wastewater Reclamation Division (WWRD) operates the Kihei WWRF which produces R-1 recycled water, the highest grade of recycled water for non-potable use, and distributes this valuable water resource through the South Maui Recycled Water System. During the summer months, the WWRD delivers approximately 1.8 million gallons per day (MGD) of recycled water to approximately 30 customers in South Maui. The proposed 2nd 1.0 MG tank would be located on the existing County site adjacent to the existing 1.0 MG R-1 tank, and the proposed pipeline improvements would occur at the Kihei WWRF. The proposed improvements will create a more robust system that can accommodate the increase in recycled water demands during the peak summer months, provide redundancy and greater reliability, and allow for an increase in the number of recycled water customers. The overall effect would provide an alternate water source to meet non-potable demands and thereby reserve potable water for potable needs, as well as decrease the use of injection wells for effluent disposal.

1. PROJECT OVERVIEW

1.1 PROJECT LOCATION, CURRENT LAND USE, AND OWNERSHIP

The project is located to the east of Piilani Highway on two properties identified by Tax Map Key (TMK) 2-2-002:075 and TMK 2-2-002:010. TMK 2-2-002:075 is the location of the existing 1.0 million gallon (MG) recycled water storage tank and is owned by the County of Maui. The 1.332 acre tank site is approximately 0.5 miles east of the Kihei Wastewater Reclamation Facility (WWRF) and is within property owned by the Monsanto Company. The tank site is accessed via a private paved roadway from Piilani Highway. TMK 2-2-024:010 is the location of the existing Kihei WWRF and is owned by the County of Maui. The 12.931 acre Kihei WWRF is located off of Piilani Highway and is accessible through East Welakahao Road. See **Figure 1** for the project location.

1.2 PROPOSED ACTION

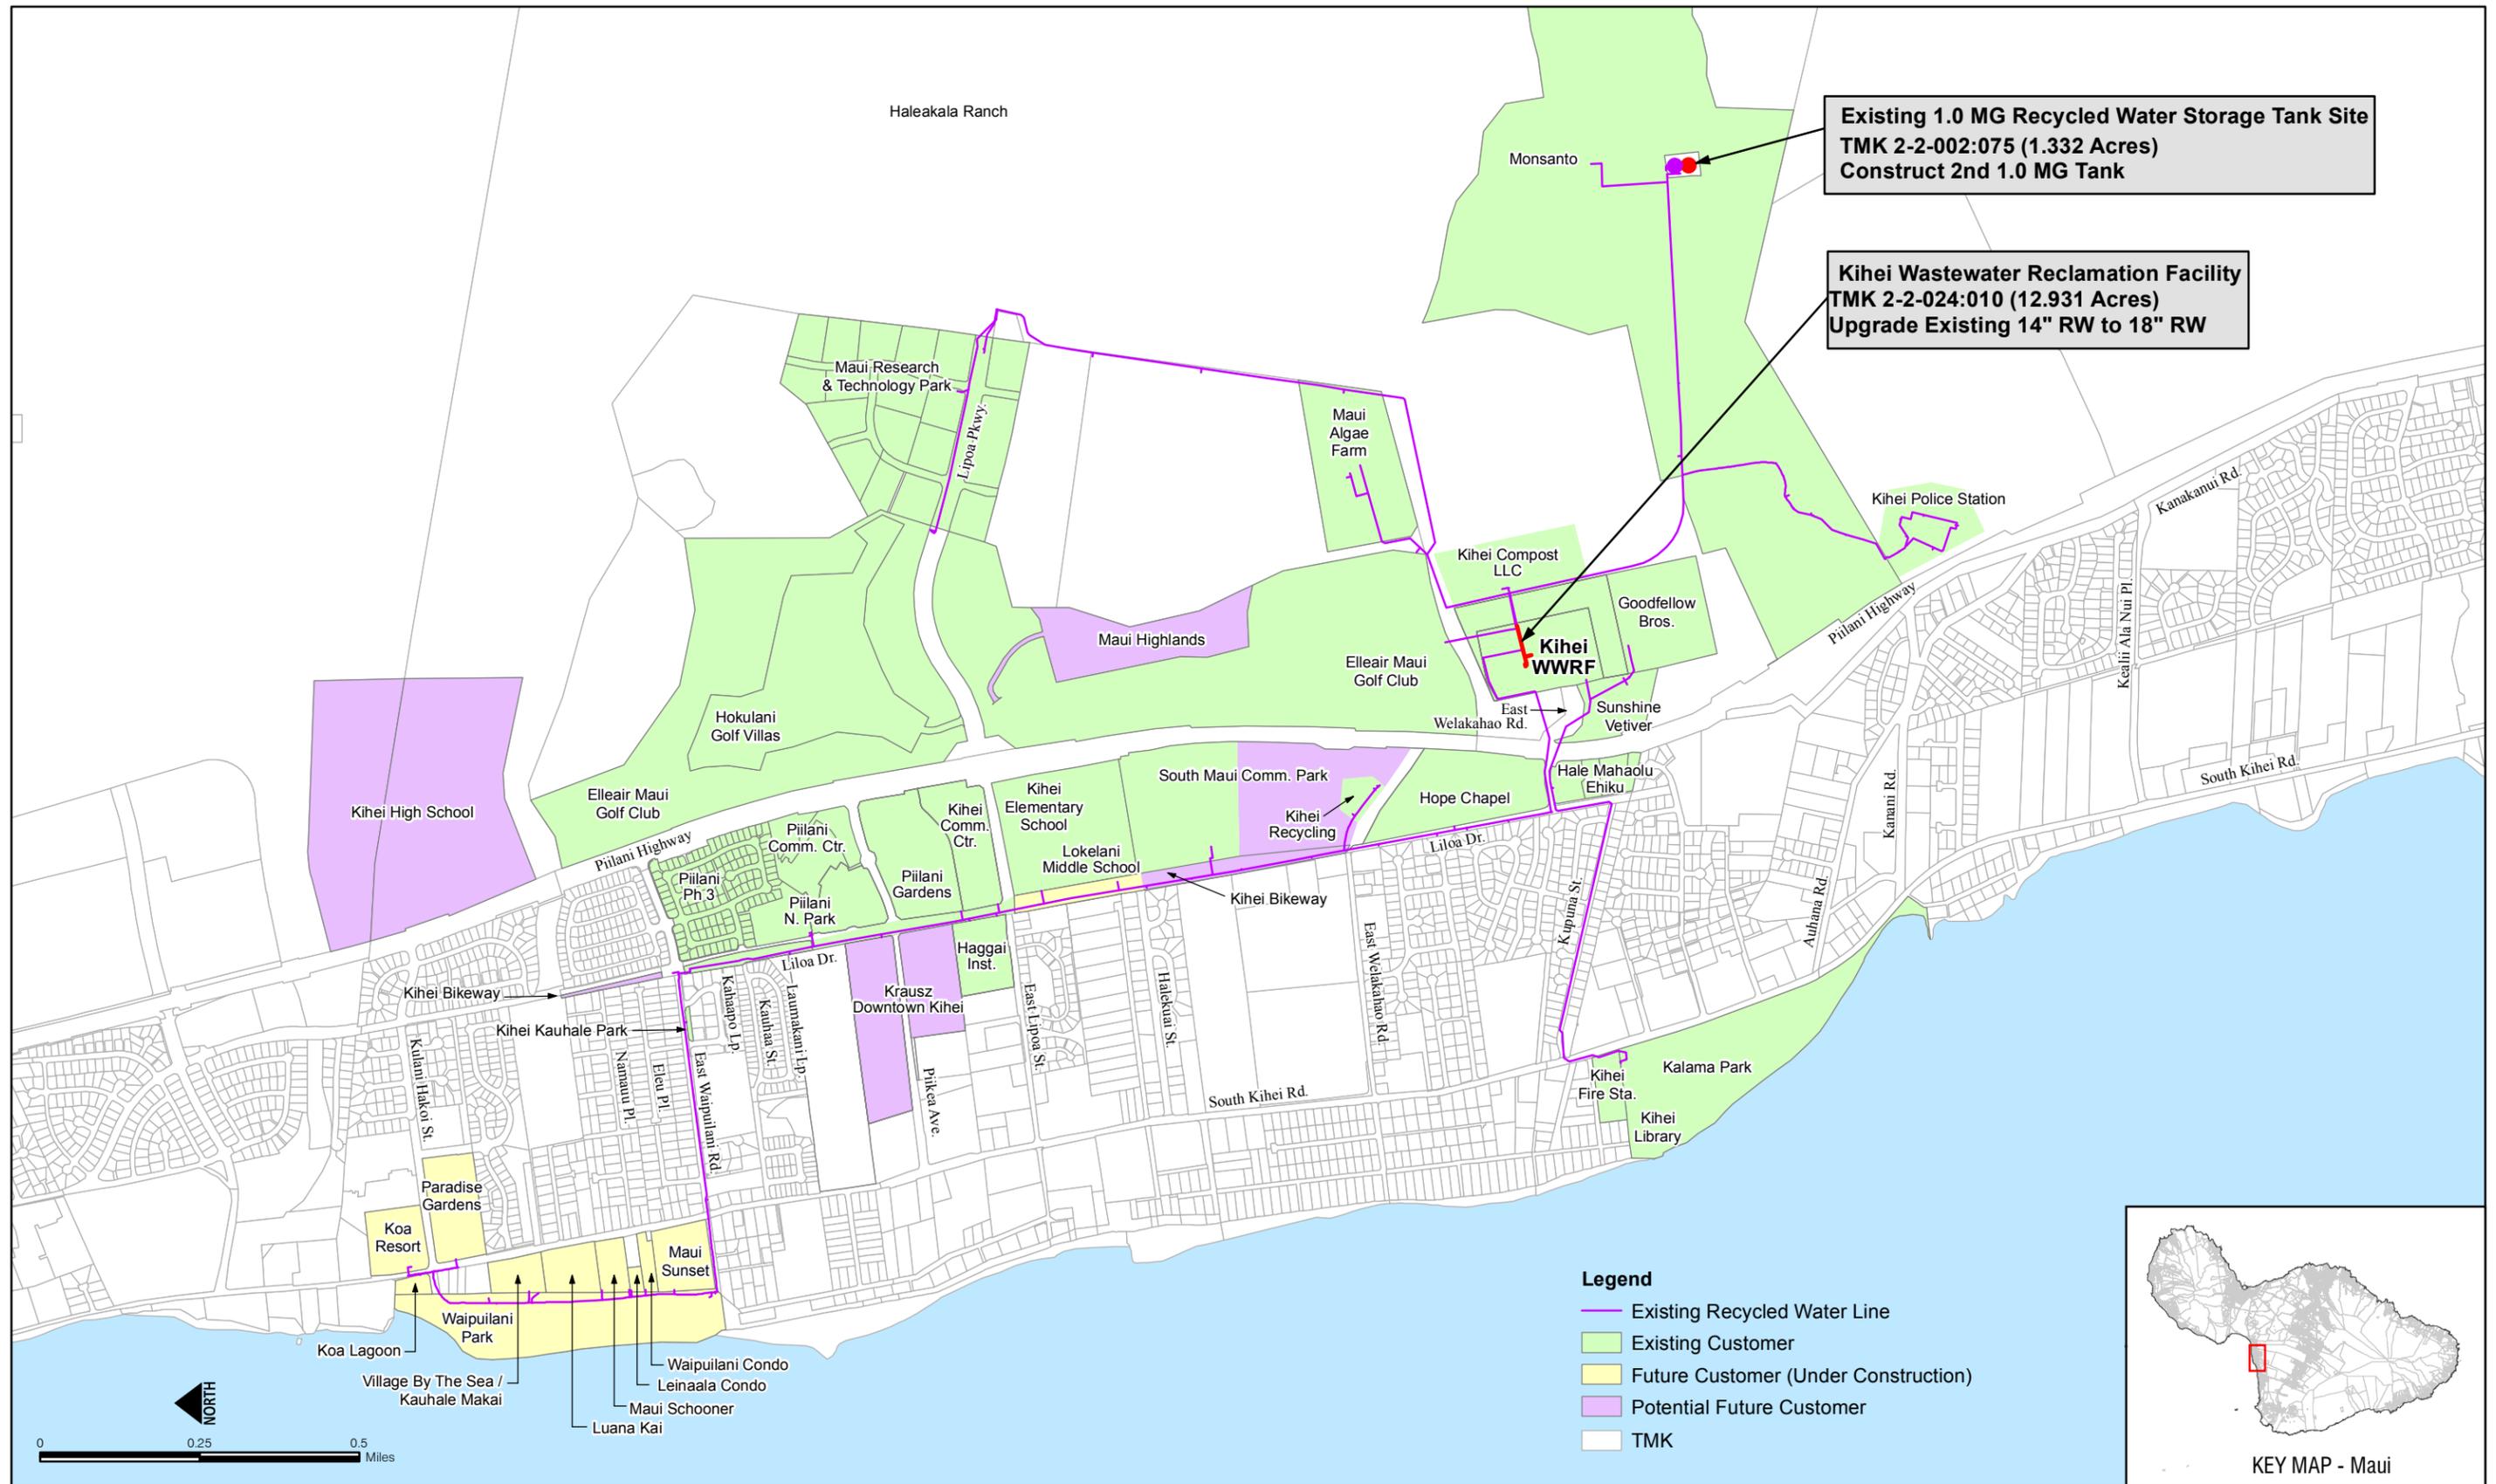

The proposed project includes work as described below:

- Construct a new 1.0 MG recycled water storage tank and appurtenances adjacent to the existing tank. The tank dimensions would be similar to the existing tank, approximately 20 feet high and 100 feet in diameter. See **Figure 2** for photos of the existing tank site.
- Provide new electric service from an existing Monsanto overhead line and provide security lighting at the tank site.
- Upgrade approximately 400 feet of existing 14-inch recycled water line to 18-inch recycled water line, replace the effluent pump station flow meter and provide a new meter vault at the Kihei WWRF. See **Figure 3** for the proposed 18-inch recycled water line alignment.

1.3 PURPOSE AND NEED

The County of Maui, Wastewater Reclamation Division (WWRD) operates the Kihei WWRF which produces R-1 recycled water, the highest grade of recycled water for non-potable use, and distributes this valuable water resource through the South Maui Recycled Water System. During the summer months the WWRD delivers approximately 1.8 million gallons per day (MGD) of recycled water to approximately 30 customers in South Maui. The existing system consists of a 1.0 MG recycled water storage tank and distribution system that extends service to commercial properties and public facilities as shown on **Figure 1**. Future potential areas of service are also shown on **Figure 1**.

The County of Maui has been at the forefront of water reuse in the State of Hawaii, and has been proactively developing its reuse programs since the early 1990's. In 1996, Chapter 20.30 – Use of Reclaimed Water, was adopted into the Maui County Code of Ordinances. Chapter 20.30 – Use of Reclaimed Water serves to “conserve the limited water resources in the County of Maui, encourage the use of reclaimed water and reduce the reliance on injection wells for the disposal of wastewater effluent.” This ordinance requires the mandatory use of recycled water for irrigation by commercial properties where there is a recycled water distribution main contiguous or within one hundred feet of the consumer's property line.

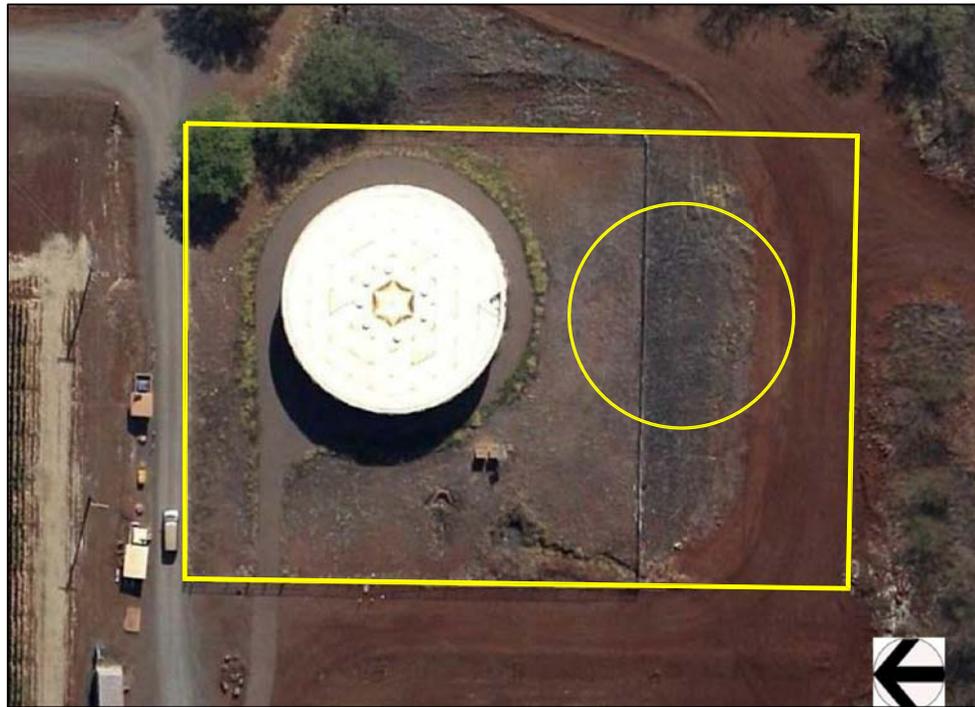

Photo 2: Existing 1.0 MG recycled water storage tank; approximate boundary of TMK 2-2-002:075 delineated in yellow. (Source: Google Maps)

Photo 1: Existing 1.0 MG recycled water storage tank looking east/mauka. (Source: Google Maps)

Photo 3: Existing Kihei Wastewater Reclamation Facility (WWRF); general location of new 18-inch recycled water line.

This project will create a more robust system that can accommodate the increase in recycled water demands during the peak summer months, provide redundancy and greater reliability, and allow for an increase in the number of recycled water customers. The overall effect would provide an alternate water source to meet non-potable demands and thereby reserve potable water for potable needs, as well as decrease the use of injection wells for effluent disposal.

1.4 CONSTRUCTION COST AND IMPLEMENTATION SCHEDULE

The estimated cost of construction is \$3.5 million. It is anticipated that the project will be bid in 2017. Construction is expected to be completed within 18 months of award.

1.5 CHAPTER 343, HAWAII REVISED STATUTES (HRS) REQUIREMENTS

The proposed project will utilize County of Maui lands and funds which is a statutory trigger for processing an Environmental Assessment, pursuant to HRS Section 343-5(a), Environmental Impact Statement (EIS), Applicability and requirements, and Hawaii Administration Rules (HAR), Section 11-200-5 Agency action.

2. AFFECTED ENVIRONMENT – EXISTING CONDITIONS, POTENTIAL IMPACTS, AND PROPOSED MITIGATION MEASURES

2.1 NATURAL PHYSICAL ENVIRONMENT

2.1.1 Surrounding Land Uses

Existing Conditions

The Kihei WWRF and the tank site are located to the east of Piilani Highway. The Kihei WWRF is bordered by the Elleair Maui Golf Club to the north, Goodfellow Bros. offices to the south, and Kihei Compost, LLC to the east. The existing 1.0 MG recycled water storage tank site is located within land owned by Monsanto Corporation, which is utilized for cultivation of high quality seed corn. See **Figure 1** for the location of adjacent properties with respect to the Kihei WWRF and tank site.

Potential Impacts and Proposed Mitigation Measures

The existing Kihei WWRF and recycled water storage and transmission system have been in operation since the late 1990's, reclaiming 1.6 to 2.0 MGD and providing recycled water to neighboring properties. The surrounding properties currently utilize the valuable water resource for irrigation and fire protection and will benefit from the increased capacity and reliability provided by the project.

2.1.2 Climate

Existing Conditions

The mean annual temperature of the island is approximately 76.9 degrees Fahrenheit. According to the Rainfall Atlas of Hawaii, the mean annual rainfall in Kihei is 10.89 inches, with a high of 2.65 inches in January and low of 0.05 inches in July. However, studies summarized in a National Oceanic and Atmospheric Administration (NOAA) Technical Report National Environmental Satellite, Data, and Information Services (NESDIS) 142-8, Regional Climate Trends and Scenarios for the U.S. National Climate Assessment, dated January 2013, have indicated that Hawaii's temperature has slowly increased over the past 50 – 90 years, while the amount of rainfall has decreased over the past 100 years. The Kihei area is reported to have the lowest rainfall on Maui, and is considered one of the driest areas in the Hawaiian Island archipelago.

Potential Impacts and Proposed Mitigation Measures

The pipeline improvements at the existing Kihei WWRF, construction of the 1.0 MG recycled water storage tank, and operations of the facilities are not anticipated to have an impact on the climate.

2.1.3 Geology and Topography

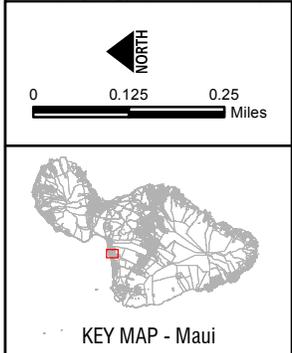

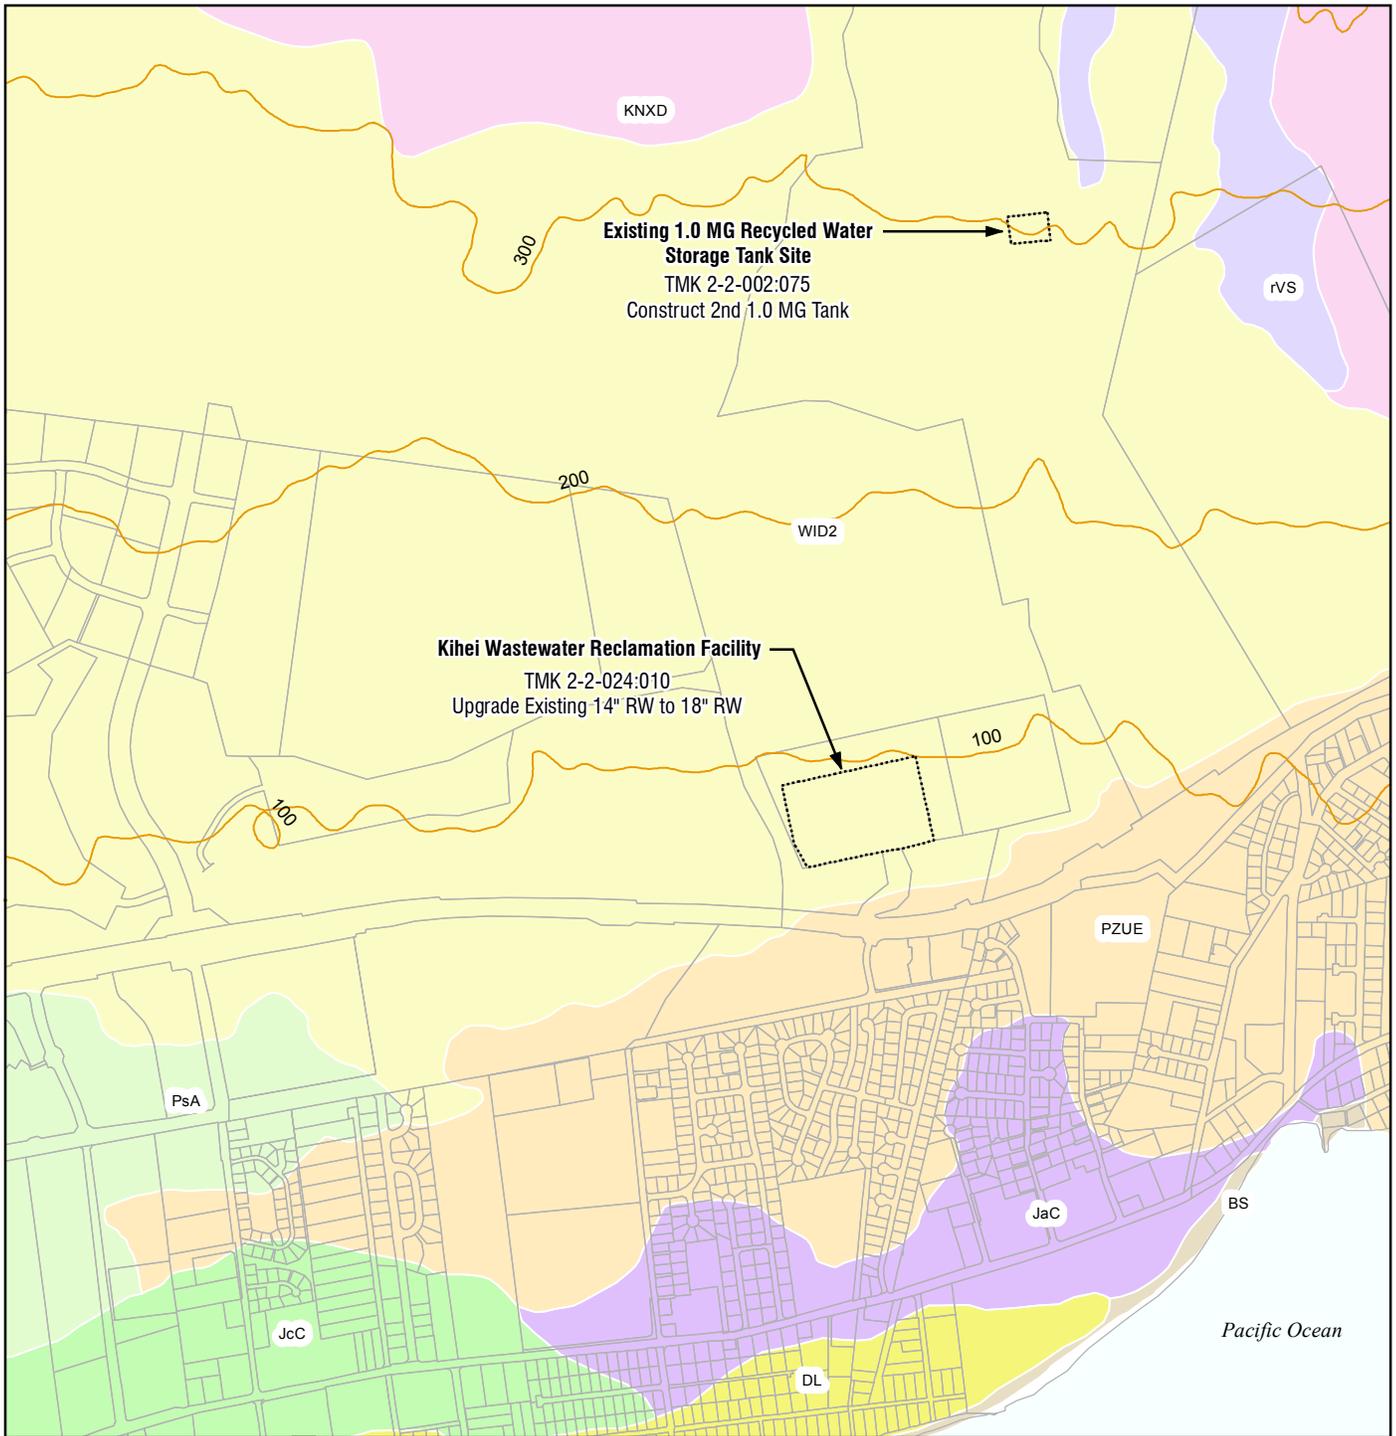

Existing Conditions

Maui is the second largest island in the State of Hawaii with a land area of approximately 728 square miles. The island of Maui was formed by the merging of the West Maui volcano and the East Maui volcano and is divided into three main areas, West Maui, East Maui, and Central Maui. Central Maui is the strip of land that connects West and East Maui. Kihei is located on the western slopes of East Maui. This area is relatively smooth and sloping to moderately steep.

The Kihei WWRF and tank site topography generally slopes at about 3 percent in the westerly direction from mauka to makai. The Kihei WWRF is located at approximately 80 feet to 100 feet mean sea level (MSL), and the tank site is located at approximately 300 feet MSL. See **Figure 4** for the general topography of the Kihei WWRF and tank site.

Potential Impacts and Proposed Mitigation Measures

This project does not significantly alter the topography of the existing terrain. Construction of the new 1.0 MG recycled water storage tank is proposed on the existing tank site, adjacent to the existing tank. Short term impacts include ground disturbing activities, which would be limited to excavation down to depths and subsurface material as recommended by the geotechnical report for spread footings and excavation required for piping, power conduits, and lighting at this location. Long term impacts are anticipated to be negligible because the existing tank site was previously mass graded. Fine grading will be required for the new tank and related site improvements, but will not significantly alter the topography of the existing terrain.

Legend	
	TMK
	Elevation
Soil Type Symbol & Name	
	BS: Beaches
	DL: Dune land
	JaC: Jaucas sand, 0 to 15 percent slopes
	JcC: Jaucas sand, saline, 0 to 12 percent slopes
	KNXD: Keawakapu extremely stony silty clay loam, 3 to 25 percent slopes
	PsA: Pulehu clay loam, 0 to 3 percent slopes
	PZUE: Puuone sand, 7 to 30 percent slopes
	rVS: Very stony land
	WID2: Waiakoa extremely stony silty clay loam, 3 to 25 percent slopes, eroded

Pipe related upgrades at the Kihei WWRF will have short term impacts from ground disturbing activities. No long term impacts to the Kihei WWRF are anticipated because the surface is intended to be restored to its original condition.

2.1.4 Soils Survey

Existing Conditions

The Soil Survey of Islands of Kauai, Oahu, Maui, Molokai, and Lanai, State of Hawaii, United States Department of Agriculture (USDA), Soil Conservation Service, August 1972, “Soil Survey” provides maps indicating the locations of various soil classifications and descriptions of these soil classifications and soil characteristics. According to the Soil Survey, the soil classification of the Kihei WWRF and the tank site is Waiakoa extremely stony silty clay loam, 3 to 25 percent slopes, eroded (WID2). See **Figure 4** for the soil classification of the Kihei WWRF and tank site. The Soil Survey describes WID2 as, “similar to Waiakoa very stony silty clay loam, 3 to 7 percent slopes, except that it is eroded and stones cover 3 to 15 percent of the surface. In most areas about 50 percent of the surface layer has been removed by erosion. Runoff is medium, and the erosion hazard is severe.” This soil is primarily used for pasture and wildlife habitat. Low bedrock outcrops are commonly associated with these soils, and cultivation is usually impractical unless the stones are removed.

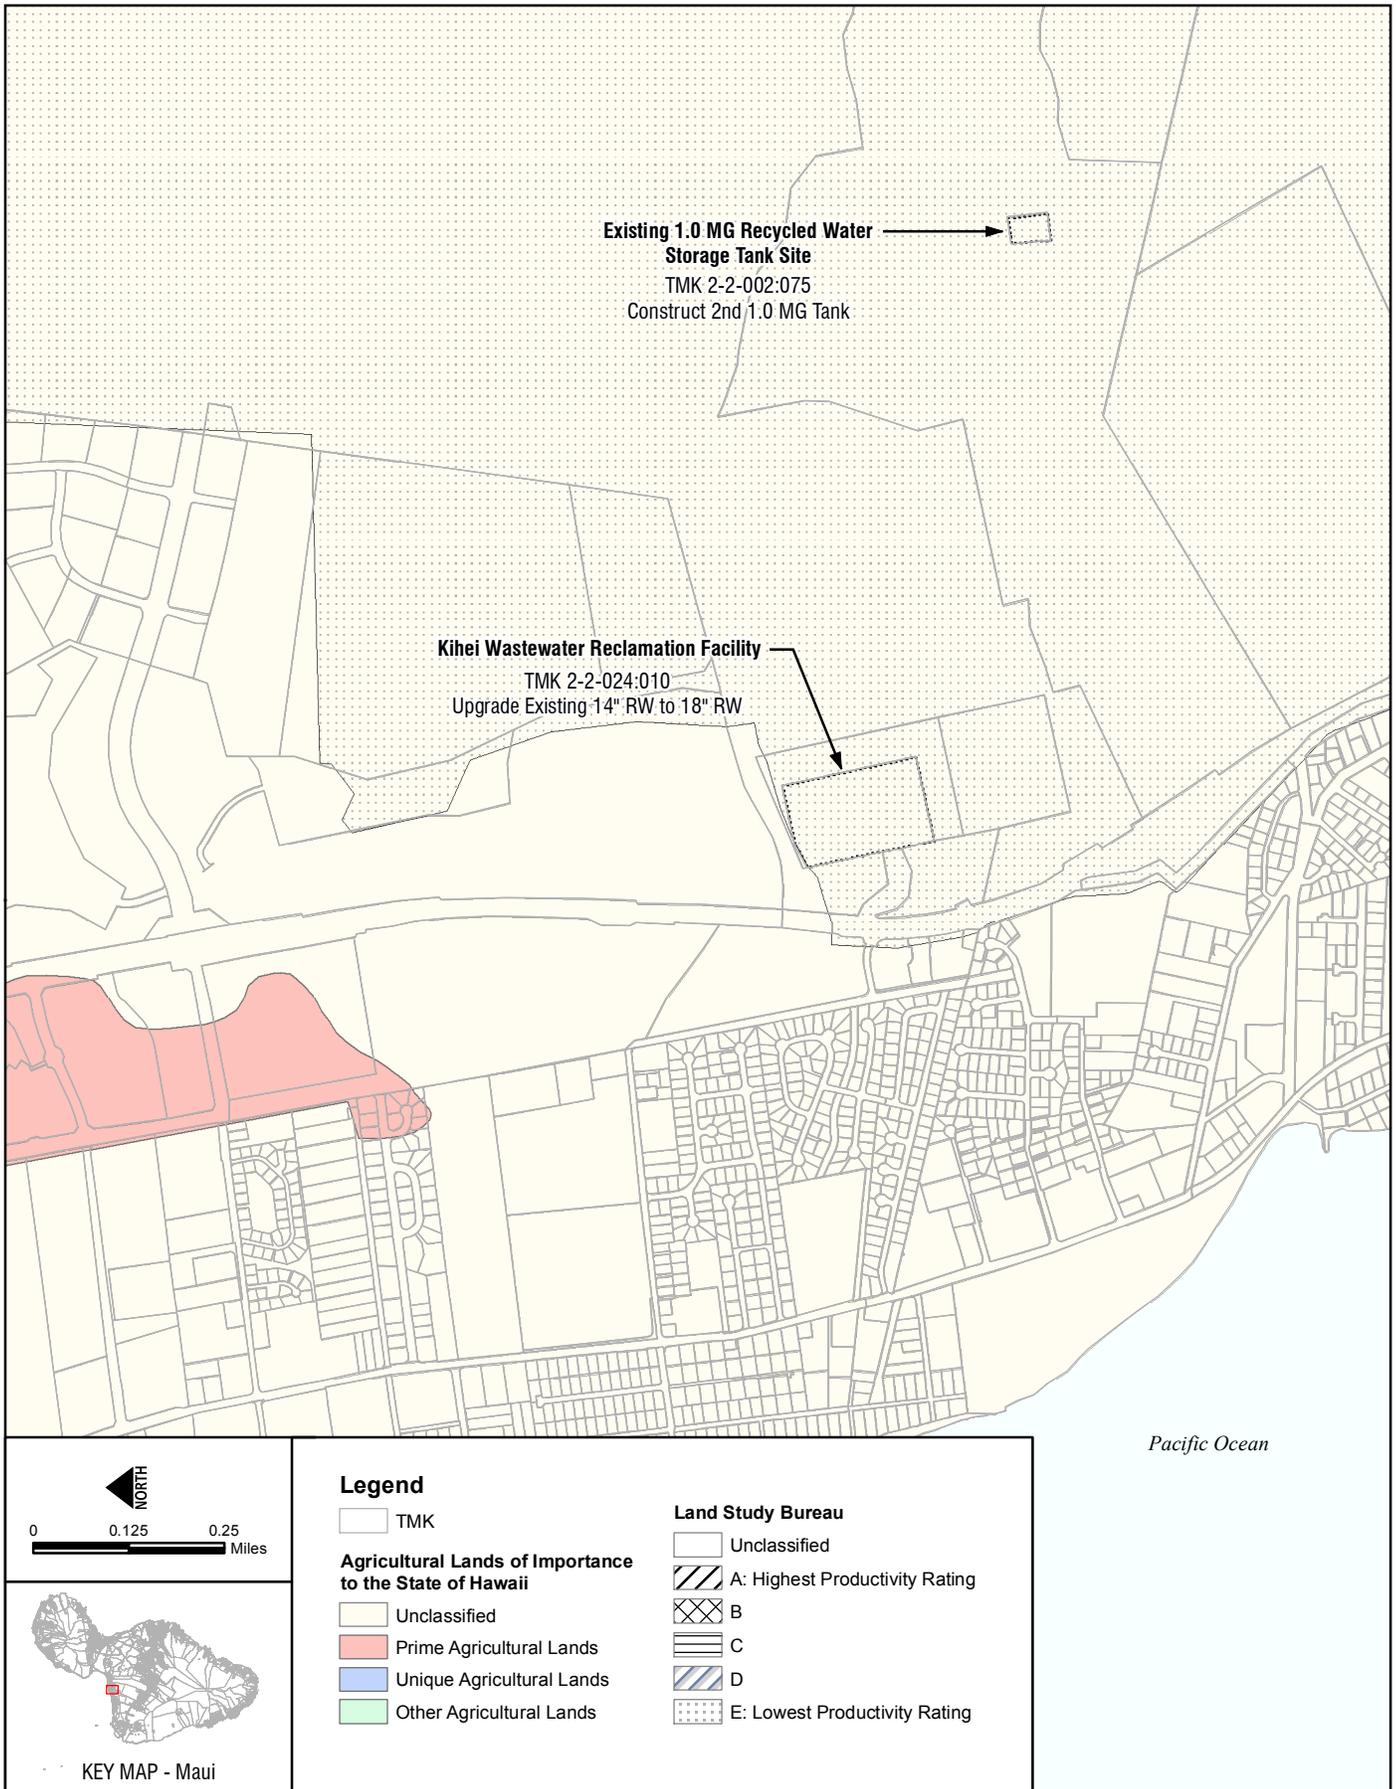

Potential Impacts and Proposed Mitigation Measures

A soils investigation report for the tank site and vicinity of the pipe upgrade at the Kihei WWRF, dated February 26, 2016 describes the subsurface conditions as silty clay of highly compressible nature and collapsing type soil structure. Based on exploratory borings, laboratory testing, and analysis, it was recommended that the material be removed and conventional spread footings be founded on weathered basalt to support a 1.0 MG recycled water storage tank. The report also indicated that the new flow meter vault may be founded directly on the underlying weathered basalt and the proposed effluent pipe may be supported on conventional pipe cushion. Short term impacts during construction will be mitigated with Best Management Practices (BMPs). In order to minimize runoff and erosion associated with WID2 soil, BMPs which may consist of compost filter sock and drain inlet filters to minimize the quantity of sediment leaving the site, and soil stabilization using appropriate ground cover will be implemented.

2.1.5 Agriculture

Existing Conditions

The University of Hawaii, Land Study Bureau 1967 “Detailed Land Classification – Island of Maui” rated all non-urban lands in five categories based on their soil properties and capabilities for agricultural productivity, which is measured by their performance on selected crops. The categories were assigned letters “A” through “E” in order of highest to least productive. The Kihei WWRF and tank site area are entirely within State Agricultural land and have been classified by the Land Study Bureau as “E,” the least productive agricultural land. See **Figure 5**.

The Department of Agriculture “Agricultural Lands of Importance to the State of Hawaii” (ALISH) provides a classification system primarily based on soil characteristics. ALISH consists of three classifications which include Prime Agricultural Lands, Unique Agricultural Land, and Other Agricultural Land. These classifications identify the long term implications of land use options for production of food, feed, forage, and fiber crops. However, the classifications do not designate areas for any specific land use. Unclassified Lands not considered for classification as ALISH are 1) Developed urban land over 10 acres, 2) Natural or artificial enclosed bodies of water over 10 acres, 3) Forest reserves, 4) Public use lands, 5) Lands with slopes in excess of 35%, and 6) Military installations, except undeveloped areas over 10 acres. The Kihei WWRF and tank site are entirely within ALISH Unclassified Lands. See **Figure 5**.

Potential Impacts and Proposed Mitigation Measures

The Kihei WWRF and tank site are unclassified by ALISH and have the lowest productivity rating by the Land Study Bureau. The ALISH classification system does not affect the Kihei WWRF and tank site because the sites are public use lands.

Both project sites have been previously dedicated for public utility facilities, therefore no adverse impact to agriculture is anticipated. This project will have positive impacts on agriculture by enhancing the existing recycled water distribution system, which provides an important water resource for agricultural use.

2.1.6 Flora and Fauna

Existing Conditions

The terrestrial ecosystem of this area is described by the “Atlas of Hawaii,” third edition, dated 1998 as Lowland Dry Shrubland and Grassland. Natural vegetation typical of Lowland Dry Shrubland and Grassland are rare, but generally consist of pili grasslands and aalii shrublands, and dry cliff vegetation. Threats include wildfires fueled by widespread alien grasses, feral goats, cattle grazing, and human activity. Fauna typically consists of introduced animals such as rats, mongoose, and alien birds. The project area is highly disturbed, and much of this terrestrial ecosystem has been altered.

Potential Impacts and Proposed Mitigation Measures

The Kihei WWRF is a developed site where surfaces are comprised of gravel and paved roads, and landscaped grassed areas. The tank site has been previously disturbed by construction activities and currently agricultural activities. Flora and fauna in the vicinity of the Kihei WWRF and tank site are generally limited to non-native species and do not include areas known to be inhabited by endangered species. Long term and short term negative impacts on the flora and fauna as a result of this project are not anticipated.

2.1.7 Hydrology

Existing Conditions

Groundwater is defined in the State Water Code as “any water found beneath the surface of the earth, whether in perched supply, dike-confined, flowing, or percolating in underground channels or streams, under artesian pressure or not, or otherwise.” Surface water is defined as “both contained surface water—that is, water upon the surface of the earth in bounds created naturally or artificially including, but not limited to, streams, other watercourses, lakes, reservoirs, and coastal waters subject to state jurisdiction— and diffused surface water—that is, water occurring upon the surface of the ground other than in contained water bodies. Water from natural springs is surface water when it exits from the spring onto the earth’s surface.” The Commission on Water Resource Management (CWRM) has established hydrologic units for both groundwater and surface water resources.

Groundwater

Groundwater hydrologic units have been delineated by Aquifer Sector Areas which are further subdivided into Aquifer System Areas. The Kihei WWRF and tank site are located within the Central Aquifer Sector, over the Kamaole Aquifer System. The sustainable yield for the Kamaole Aquifer System is estimated at 11 MGD. Groundwater movement in aquifers is generally from the mountain to the ocean.

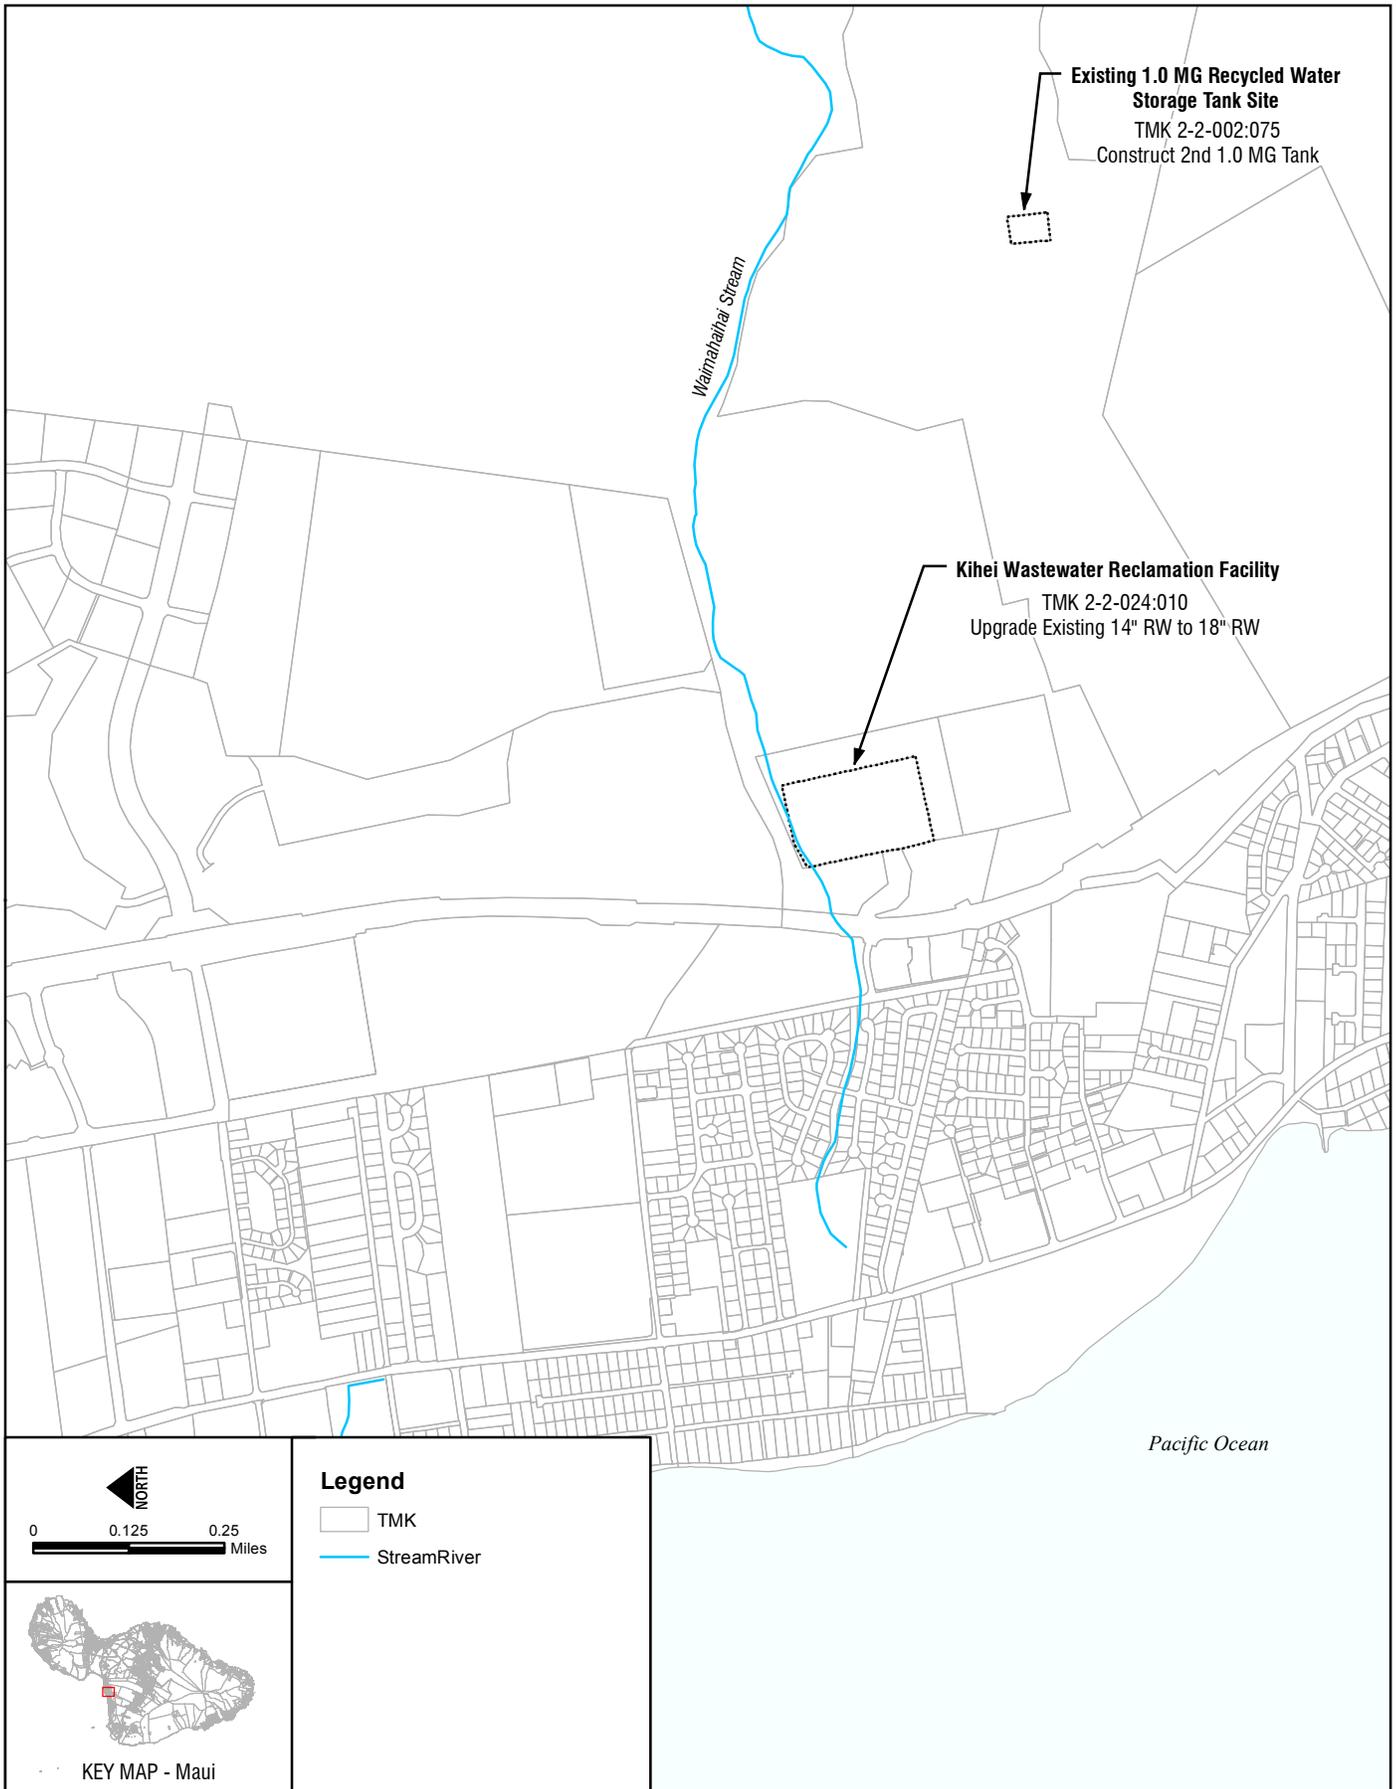

Surface Water

Surface water hydrologic units are divided by watershed units which are comprised of one or more drainage basins. The Kihei WWRF and tank site are located within the Hapapa surface water hydrologic unit. The State of Hawaii Office of Planning global information system (GIS) data indicate that Waimahaihai Stream, an intermittent stream, is closest in proximity to the Kihei WWRF and tank site. There are no perennial streams in the area. See **Figure 6** for the approximate location of the Waimahaihai Stream with respect to the Kihei WWRF and tank site.

Potential Impacts and Proposed Mitigation Measures

Groundwater – Quantity

Long term impacts include a greater supply of recycled water to help offset the decrease in groundwater recharge which has been documented in, a United States Geological Survey (USGS) Scientific Investigations Report (SIR) 2007 – 5103, “A Study of the Effects of Agricultural Land-Use Changes and Rainfall on Ground Water Recharge in Central and West Maui, Hawaii, 1926-2004.” The central area identified in the study generally overlaps with the area defined as the Central Aquifer Sector and includes the Kamaole Aquifer System beneath Kihei. The study reports that a decrease in groundwater recharge has been attributed to changes in irrigation methods from furrow irrigation to drip irrigation, an overall reduction in agricultural land use, and periods of below-average rainfall.

South Maui Recycled Water System Expansion
 Draft Environmental Assessment

STREAMS, RIVERS AND DIVERSIONS MAP

Groundwater – Quality

Negative impacts on groundwater quality resulting from this project and related recycled water use are not anticipated. In fact, positive impacts include a reduction in the amount of treated wastewater effluent disposed of via injection wells as more of the effluent is reused to meet non-potable water demands. With respect to impacts of reuse on groundwater quality, State and Federal regulatory oversight provides a framework to ensure the safe use of recycled water covering treatment, distribution and use; R-1 recycled water is the highest grade of recycled water which is treated and distributed in accordance with the State Department of Health (DOH) regulations set forth in the Reuse Guidelines, dated January 2016. The guidelines require appropriate application rates and application times to minimize the amount of recycled water from percolating into the ground. The guidelines also delineate approved service areas for recycled water application to protect underground potable water sources.

Surface Water

Recycled water is not anticipated to have an impact on surface waters. The recycled water will be conveyed to the new 1.0 MG recycled water tank and distributed through a closed pipe system. In addition, the Reuse Guidelines requires BMPs for the method and rate of application of recycled water to avoid surface runoff.

2.1.8 Drainage

Existing Conditions

Drainage conditions related to overland flow resulting from storm water runoff, both during and post-construction are discussed in this section. Overland flow at the Kihei WWRF generally travels from east to west and is captured in existing onsite drain inlets. Overland flow at the tank site generally travels from east to west across the site and sheet flows offsite at the west end of the property to surrounding agricultural lands. The nearest surface water is Waimahaihai Stream, which is an intermittent stream located to the west of the Kihei WWRF and tank site. The DOH Water Quality Standards Classifications Map indicates that the Waimahaihai Stream is classified under “Class 2 streams & waterbodies.”

Potential Impacts and Proposed Mitigation Measures

The Waimahaihai Stream is the closest receiving water for storm water runoff from the project sites. In order to meet the requirements of the antidegradation policy HAR, Section 11-54-1.1, protect the designated uses of Class 2 waters as defined in HAR, Section 11-54-3, and meet the water quality criteria as defined in HAR, Section 11-54-4 through 11-54-8, the Contractor will be required to implement BMPs to mitigate discharge of storm water runoff and sediment resulting from construction activities.

Proposed construction at the Kihei WWRF is entirely within the developed portion of the existing facility, and disturbed surfaces from construction will be restored to their original conditions. Project improvements will not increase the quantity of storm water runoff, and post construction storm water runoff will continue to discharge into the existing onsite drainage structures and drainage features. Existing drainage features include grass landscaped areas. Proposed construction

at the tank site will include a paved perimeter road around the 1.0 MG recycled water tank, sloped to direct storm water runoff westward to water quality facilities. In compliance with the State's position that all projects must reduce, reuse, and recycle to protect, restore, and sustain water quality and beneficial uses of State waters, low impact development (LID) techniques such as detention facilities, limiting impervious surfaces, and reducing driveway and roadway widths will be considered.

In compliance with HAR, Chapter 11-55, a National Pollution Discharge Elimination System (NPDES) Permit will also be obtained for the project if the disturbed area is determined to be greater than one acre.

The proposed project does not involve work in, over, or under waters of the United States. Army permitting requirements do not apply to this project.

2.1.9 Historical and Archaeological Sites

Existing Conditions

The Department of Land and Natural Resources (DLNR), State Historic Preservation Division (SHPD) includes three branches, History and Culture, Archaeology, and Architecture. SHPD maintains the Hawaii Register of Historic Places, which recognizes districts, sites, structures, buildings, and other objects in Hawaii's history, architecture, archaeology, engineering, and culture. The National Park Service (NPS) maintains the National Register of Historic Places, which includes significant properties nominated by State and Federal agencies, historic areas in the National Park System, and all National Historic Landmarks.

An Archaeological Field Inspection was performed for the project sites which included historical and archaeological background research of the area and a field inspection to identify surface archaeological sites or features and an assessment of the potential for impact to such features. Refer to **Appendix A** for the Archaeological Field Inspection Report. No historic properties were identified. Further, due to the shallow nature of soils in the project areas and heavily modified landscape (mechanical grading and use), there seems little possibility that historical properties would occur in subsurface contexts. A formal Archaeological Inventory Survey of the property is not recommended.

Potential Impacts and Proposed Mitigation Measures

Based on the findings of the Archaeological Field Inspection, no adverse impacts on historical and archaeological sites are anticipated. In the event that human skeletal remains are inadvertently discovered during construction, the requirements in HRS Section 6.E-43.6 "Inadvertent discovery of burial sites," will be met. All contractors shall ensure that the remains shall not be moved and any activity in the immediate area that could damage the remains or the potential historic site shall cease, and SHPD, the appropriate medical examiner or coroner, and police department shall be contacted.

2.1.10 Air Quality

Existing Conditions

The quality of air in the general Kihei area is considered “Good.” The existing sources of air pollution are emissions from motor vehicles travelling along Piilani Highway.

Potential Impacts and Proposed Mitigation Measures

Potential short term impacts on air quality during construction will be mitigated by BMPs. Fugitive dust and exhaust from construction vehicles and equipment traffic and earthmoving activities will be minimized by appropriate BMPs such as regular sprinkling of water, particularly during earthwork, limiting vehicle and equipment speeds over unpaved surfaces, protecting stockpiles of excavated material, and regular vehicle maintenance in accordance with manufacturer’s recommendations.

2.1.11 Noise Quality

Existing Conditions

The DOH, Indoor and Radiological Health (IRH) Branch administers the regulations for community noise control and maximum noise tolerances as indicated in HAR Title 11, Chapter 46 Community Noise Control. The Kihei WWRF and tank site are bordered by businesses conducting agricultural activities, such as Kihei Compost, Vetiver, and Monsanto, and industrial activities, such as Goodfellow Brothers, and the Elleair Maui Golf Club to the north of the tank site. The closest residential area is across Piilani Highway approximately 0.11 miles from the closest edge of the Kihei WWRF.

Potential Impacts and Proposed Mitigation Measures

Noise from construction activities will be short term and localized. An approved Community Noise Permit may be required if construction exceeds the noise code and has a total cost of more than \$250,000 (based on the value on the building permit). Regular construction work hours will generally be during the hours of 7:00 AM to 6:00 PM Monday through Friday, and if needed, during the hours of 9:00 AM to 6:00 PM on Saturday. Certain construction equipment such as pile drivers, hydraulic hammers, jackhammers, etc., shall be restricted to 9:00 AM to 5:30 PM, Monday through Friday. Construction exceeding the maximum permissible sound levels outside of these hours will require a Community Noise Variance. Permits and variances required from the DOH IRS Branch would be obtained by the Contractor prior to construction.

2.2 ECONOMIC AND SOCIAL CONDITIONS

According to the U.S. Census Bureau, the population, percent non-Caucasian, and median household income of Kihei are as follows:

Census Designated Place	Population¹	% Minorities¹	Median Household Income²
Kihei	20,881	49.3	\$68,804

¹Source: U.S. Census Bureau, 2010 Census Redistricting Data (Public Law 94-171), Summary, extracted by Department of Business, Economic Development & Tourism (DBEDT), Hawaii State Data Center

²Source: U.S. Census American Community Survey (ACS), 2010-2014

The University of Hawaii Economic Research Organization (UHERO) conducts independent economic research on issues central to Hawaii. The organization produces summaries of their research in various forms such as Forecasts, Research Papers, Media, and UHERO Briefs. A UHERO State Forecast Update dated February 26, 2016 concludes that the Hawaii economy continues on a moderate growth path despite financial market volatility, a strong dollar, and global slowing. Previous record-setting visitor activity is slowing, however, is offset by an increase in construction activity and a pause in federal sequestration. The economic information relevant to Maui are as follows:

- Hawaii tourism overall experienced an increase in the number of visitors by about 4% more than in 2014. Each county saw an increase in the number of visitor days. However, there has been a deceleration of visitor spending related in part to the strengthening of the U.S. dollar.
- The labor market overall is improving, where employment growth is outpacing expansion of the labor force, driving the unemployment rate down.
- Where previously employment growth was once driven by travel and tourism, it is now construction that is generating the greatest job gains. Employment in the public sector and medium term prospects for federal employment remain bleak. Outside of the construction sector, strong surges in employment occurred in healthcare and transportation and utilities.

The project will have short term, positive impacts associated with construction. Assuming the project is awarded to a local contractor, jobs will be created, and assuming those workers spend their income on goods and services, a positive impact on the economy would be recognized.

The project will have long term, positive economic impacts, as it will increase the amount of recycled water available necessary to support the irrigation needs of existing and potential future development, provide redundancy and less dependency on potable water resources.

2.2.1 Cultural Impact

The coastal area of the Kihei-Makena community was known for its fishing villages. Several fishponds still remain along the coast, including the Kalepolepo Fishpond, which is included on the National Register of Historic Places in 1966. Construction is estimated between 1400-1500 AD, and the fishpond was used for farming awa (milkfish) and ama ama (flathead mullet). The southwestern end of the community includes a variety of archaeological resources, including Hawaiian burial sites, fishing shrines, heiau, and shelters. During the 1800s and first half of the 1900s south Maui was known for its role in cattle-ranching.

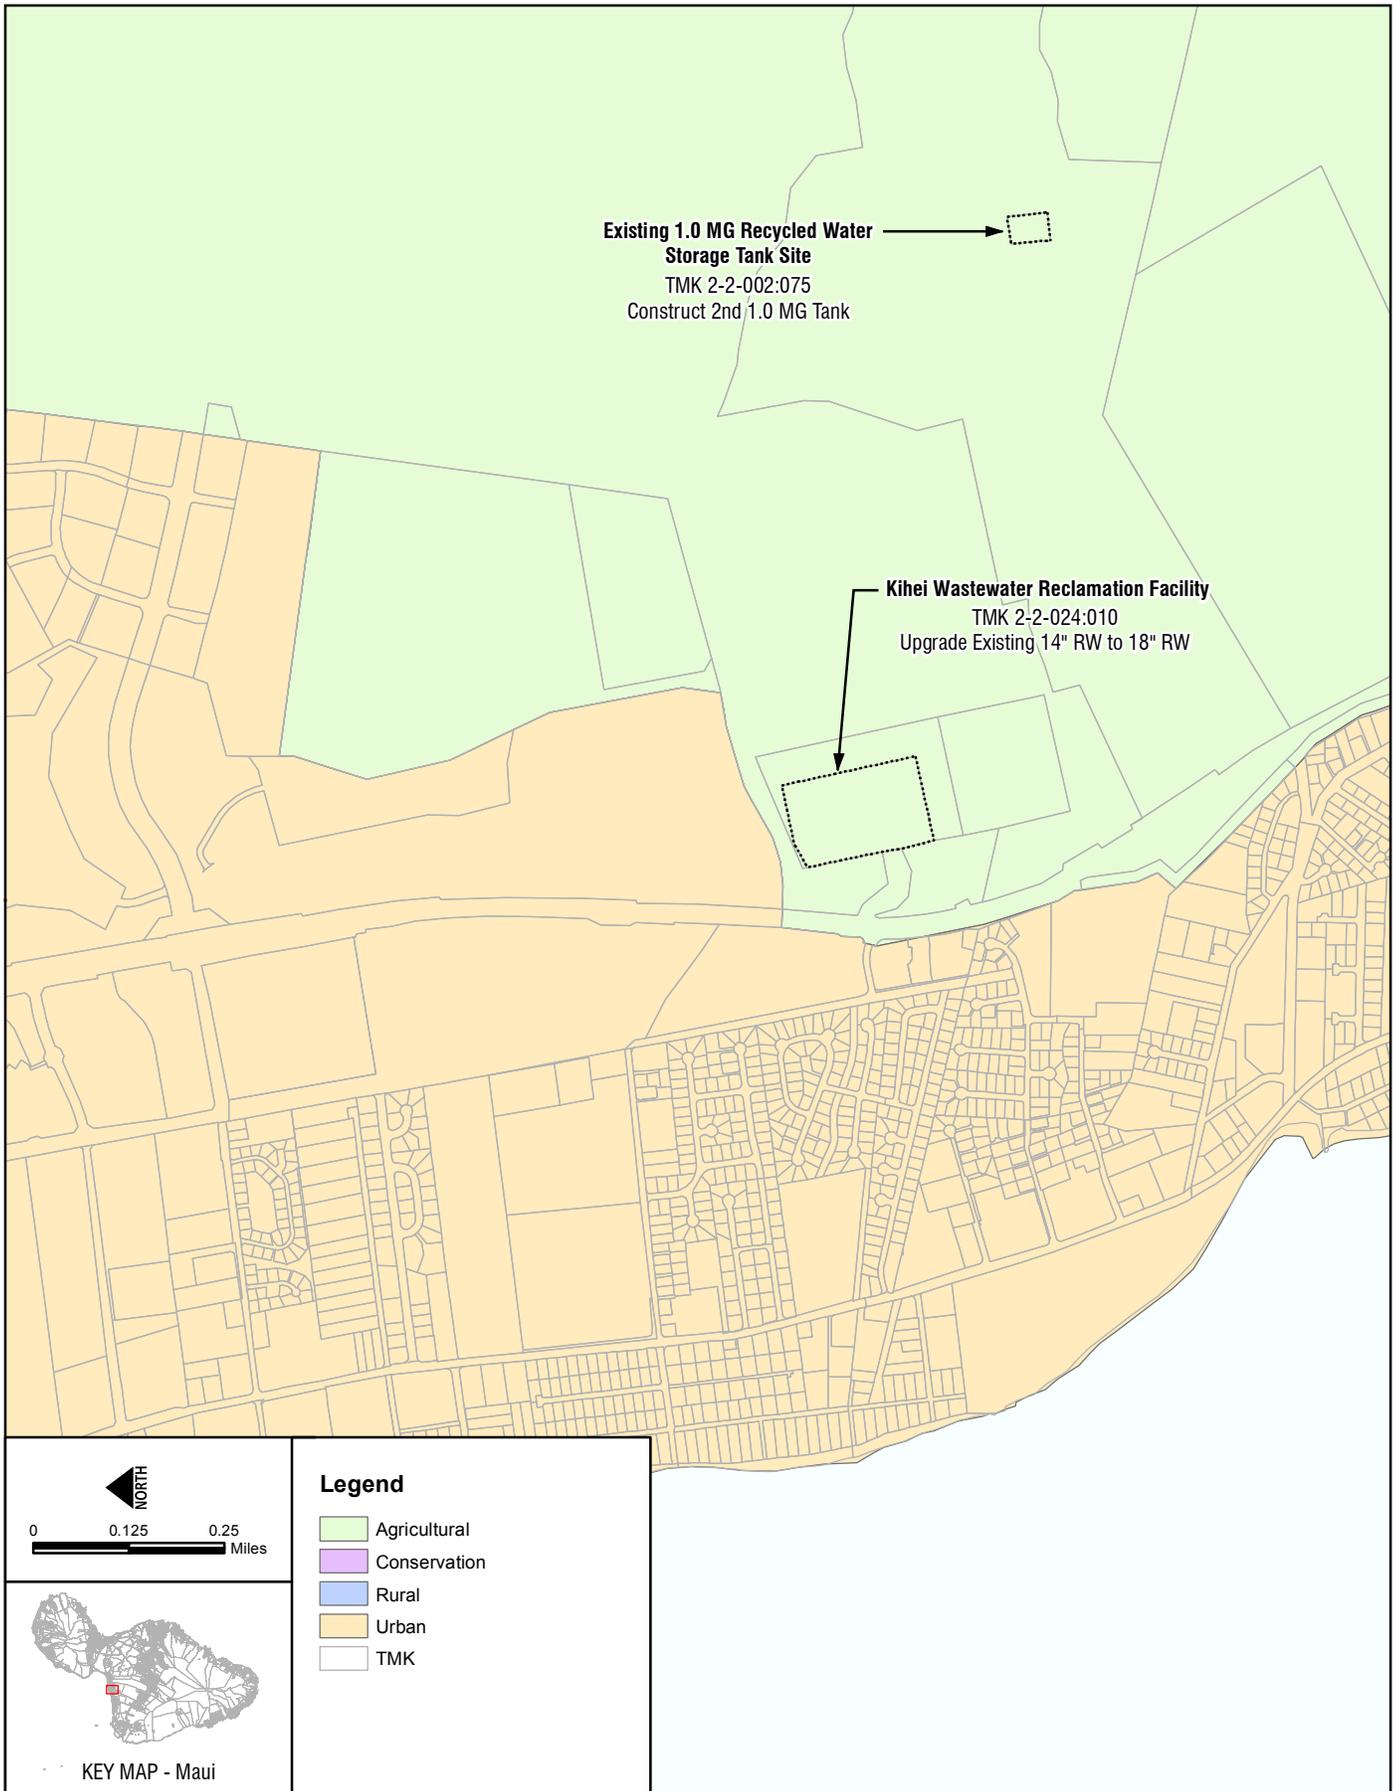

The Kihei WWRF and tank site are east of Piilani Highway, away from the coast in a relatively dry region. As a result of low rainfall and fairly unproductive soils, the general area in which the project is located is labeled as the “barren zone.” Based on archaeological and historic research, the barren zone was not subject to permanent or expansive population until recent times. As such, architectural structures associated with permanent habitation sites or ceremonial sites are not often identified in the area. The project sites are not within a culturally sensitive area, and negative impacts to cultural practices are not anticipated.

3. RELATIONSHIP TO LAND USE PLAN, POLICIES, AND CONTROLS

3.1 State Land Use Designation

The HRS, Chapter 205 Land Use Commission established four major categories of land use districts in which all lands in the state are placed. These four land use districts are designated as “Conservation,” “Agricultural,” “Urban,” and “Rural.” Both the Kihei WWRF and the tank site are entirely within an area designated as “Agricultural.” See **Figure 7**.

The new 1.0 MG recycled water storage tank and related work at the tank site will be constructed adjacent to the existing 1.0 MG recycled water storage tank, and is one of the permissible uses within the agricultural districts as defined in Section 205-4.5 Permissible uses within the agricultural districts. This project will have positive impacts on agriculture by enhancing the existing non-potable water distribution system which provides an important water resource for agricultural use.

3.2 Hawaii State Plan

The HRS, Chapter 226 Hawaii State Planning Act, also known as the Hawaii State Plan was adopted in 1978. The Hawaii State Plan serves as a guide for the future long-range development of the State through identification of goals, objectives, policies, and priority guidelines. The goals, objectives, policies, and priority guidelines relevant and supported by the proposed project are described below. The goals, objectives, policies and priority guidelines not listed are not applicable to the project; refer to **Appendix C** for a complete list and detailed evaluation.

Section 226-4: State Goals.

In order to guarantee, for present and future generations, those elements of choice and mobility that insure that individuals and groups may approach their desired levels of self-reliance and self-determination, it shall be the goal of the State to achieve:

- (1) *A strong, viable economy, characterized by stability, diversity, and growth, that enables the fulfillment of the needs and expectations of Hawaii's present and future generations.*
- (2) *A desired physical environment, characterized by beauty, cleanliness, quiet, stable natural systems, and uniqueness, that enhances the mental and physical well-being of the people.*

Discussion: The proposed project supports the state goals for a strong, viable economy and desired physical environment by creating a more robust recycled water system that supplies a valuable alternate water source to meet non-potable demands, including agricultural irrigation; and thereby reserves potable water for potable water needs, as well as decreases the use of injection wells for effluent disposal.

Section 226-7: Objectives and Policies for the Economy – Agriculture.

- (A) *Planning for the State's economy with regard to agriculture shall be directed towards achievement of the following objectives:*
 - (2) *Growth and development of diversified agriculture throughout the State.*
- (B) *To achieve the agriculture objectives, it shall be the policy of this State to:*
 - (2) *Encourage agriculture by making the best use of natural resources.*
 - (10) *Assure the availability of agriculturally suitable lands with adequate water to accommodate present and future needs.*

Discussion: Recycled water is a valuable water resource that can be used to meet non-potable water demands, and can be ideal for agricultural irrigation. The subject project will create a more robust storage and distribution system that can accommodate agricultural irrigation demands.

Section 226-13: Objectives and policies for the Physical Environment – Land, Air, and Water Quality

- (A) *Planning the State's physical environment with regard to land, air, and water quality shall be directed towards achievement of the following objectives:*
 - (1) *Maintenance and pursuit of improved quality in Hawaii's land, air, and water resources.*
- (B) *To achieve the land, air, and water quality objectives, it shall be the policy of this State to:*
 - (2) *Promote the proper management of Hawaii's land and water resources.*
 - (3) *Promote effective measures to achieve desired quality in Hawaii's surface, ground, and coastal waters.*
 - (6) *Encourage design and construction practices that enhance the physical qualities of Hawaii's communities.*
 - (7) *Encourage urban developments in close proximity to existing services and facilities.*

Discussion: The proposed project will promote the proper management of Hawaii's water resources by providing an alternative source so that water is put to its best and highest use; i.e. potable water available for potable water purposes. Further, reuse will decrease effluent disposal through injection wells. This project also supports urban development in close proximity to the existing Kihei WWRf and recycled water system.

Section 226-14: Objective and Policies for Facility Systems – In General

- (A) *Planning for the State's facility systems in general shall be directed towards achievement of the objective of water, transportation, waste disposal, and energy and telecommunication systems that support statewide social, economic, and physical objectives.*
- (B) *To achieve the general facility systems objective, it shall be the policy of this State to:*
 - (1) *Accommodate the needs of Hawaii's people through coordination of facility systems and capital improvement priorities in consonance with state and county plans.*
 - (2) *Encourage flexibility in the design and development of facility systems to promote prudent use of resources and accommodate changing public demands and priorities.*
 - (3) *Ensure that required facility systems can be supported within resource capacities and at reasonable cost to the user.*
 - (4) *Pursue alternative methods of financing programs and projects and cost-saving techniques in the planning, construction, and maintenance of facility systems.*

Discussion: The proposed project supports State and county plans which emphasize the prudent reuse of wastewater to serve non-potable needs, and reduce reliance on injection wells. Further, the true cost of recycled water is highly subsidized by the County and cost to users is lower than potable water rates. This project may be funded by Federal Funds through the State of Hawaii's Clean Water State Revolving Fund Program, which is a low interest loan available to county and state agencies.

Section 226-15: Objectives and Policies for Facility Systems – Solid and Liquid Wastes.

- (A) *Planning for the State facility systems with regard to solid and liquid wastes shall be directed towards the achievement of the following objectives:*
 - (1) *Maintenance of basic public health and sanitation standards relating to treatment and disposal of solid and liquid wastes.*
- (B) *To achieve solid and liquid waste objectives, it shall be the policy of this State to:*
 - (2) *Promote re-use and recycling to reduce solid and liquid wastes and employ a conservation ethic.*

Discussion: The proposed project supports the maintenance of basic public health and sanitation standards relating to treatment and disposal of liquid waste by promoting effluent reuse, which helps to preserve potable water sources for potable water needs.

Section 226-16: Objective and Policies for Facility Systems – Water

- (A) *Planning for the State's facility system with regard to water shall be directed towards achievement of the objective of the provision of water to adequately accommodate domestic, agricultural, commercial, industrial, recreational, and other needs within resource capacities.*
- (B) *To achieve the facility systems water objective, it shall be the policy of this State to:*
 - (1) *Coordinate development of land use activities with existing and potential water supply.*
 - (2) *Support research and development of alternative methods to meet future water requirements well in advance of anticipated needs.*
 - (3) *Reclaim and encourage the productive use of runoff water and wastewater discharges.*

- (4) *Assist in improving the quality, efficiency, service, and storage capabilities of water systems for domestic and agricultural use.*
- (5) *Support water supply services to areas experiencing critical water problems.*

Discussion: The proposed project is in coordination with existing and proposed land use activities, supports the development of an alternative water resource, facilitates the productive reuse of wastewater, and enhances the recycled water system to supply non-potable water to meet non-potable demands in the arid Kihei area.

Hawaii State Plan – HRS Ch. 226 – Part III. Priority Guidelines

226-101 Purpose.

The purpose of this part is to establish overall priority guidelines to statewide concern.

226-102 Overall Direction

The State shall strive to improve the quality of life for Hawaii's present and future population through the pursuit of desirable courses of action in seven major areas of statewide concern which merit priority attention: economic development, population growth and land resource management, affordable housing, crime and criminal justice, quality education, principles of sustainability, and climate change adaptation.

226-103 Economic Priority Guidelines.

- (A) *Priority guidelines to promote the growth and development of diversified agriculture and aquaculture:*
 - (2) *Assist in providing adequate, reasonably priced water for agricultural activities.*
- (B) *Priority guidelines for water use and development:*
 - (2) *Encourage the improvement of irrigation technology and promote the use of nonpotable water for agricultural and landscaping purposes.*

Discussion: The proposed project promotes the growth and development of diversified agriculture by provision of a reasonably priced alternative water source. With respect to water use and development, the proposed project promotes the use of non-potable water for agricultural and landscaping purposes.

Section 226-108: Sustainability.

- (A) *Priority guidelines and principles to promote sustainability shall include:*
 - (1) *Encouraging balanced economic, social, community, and environmental priorities;*
 - (2) *Encouraging planning that respects and promotes living within the natural resources and limits of the State;*

Discussion: The use of recycled water supports sustainability by encouraging balanced economic and environmental priorities, and respects and promotes living within available water resources.

Section 226-109: Climate Change Adaptation Priority Guidelines.

- (A) *Priority guidelines to prepare the State to address the impacts of climate change, including impacts to the areas of agriculture; conservation lands; coastal and nearshore marine areas; natural and cultural resources; education; energy; higher education; health; historic preservation; water resources; the built environment, such as housing, recreation, transportation; and the economy shall:*
 - (7) *Promote sector resilience in areas such as water, roads, airports, and public health, by encouraging the identification of climate change threats, assessment of potential consequences, and evaluation of adaptation options;*

Discussion: The proposed project supports climate change adaptation by promoting reuse of a water resource that would otherwise be disposed, and thereby preserves potable water resources for potable water needs.

3.3 Maui Island Plan, General Plan 2030

The Maui Island Plan (MIP), General Plan 2030 is intended to transform the way Maui County manages its lands and plans for its communities by providing direction for growth, the economy, and social and environmental decisions through the year 2030. The plan includes a Directed Growth Plan which identifies areas within and outside of designated growth boundaries. Areas within a growth boundary are further subcategorized into three types of areas, Urban, Small Town, and Rural. The Kihei WWRf is identified as an Urban area within the growth boundaries. The tank site is outside of the growth boundaries. See **Figure 8** for the location of the growth boundaries and land use designations with respect to the Kihei WWRf and tank site.

As stated in the MIP vision statement,

“Maui Island will be environmentally, economically, and culturally sustainable with clean, safe, and livable communities and small towns that will protect and perpetuate a pono lifestyle for the future.”

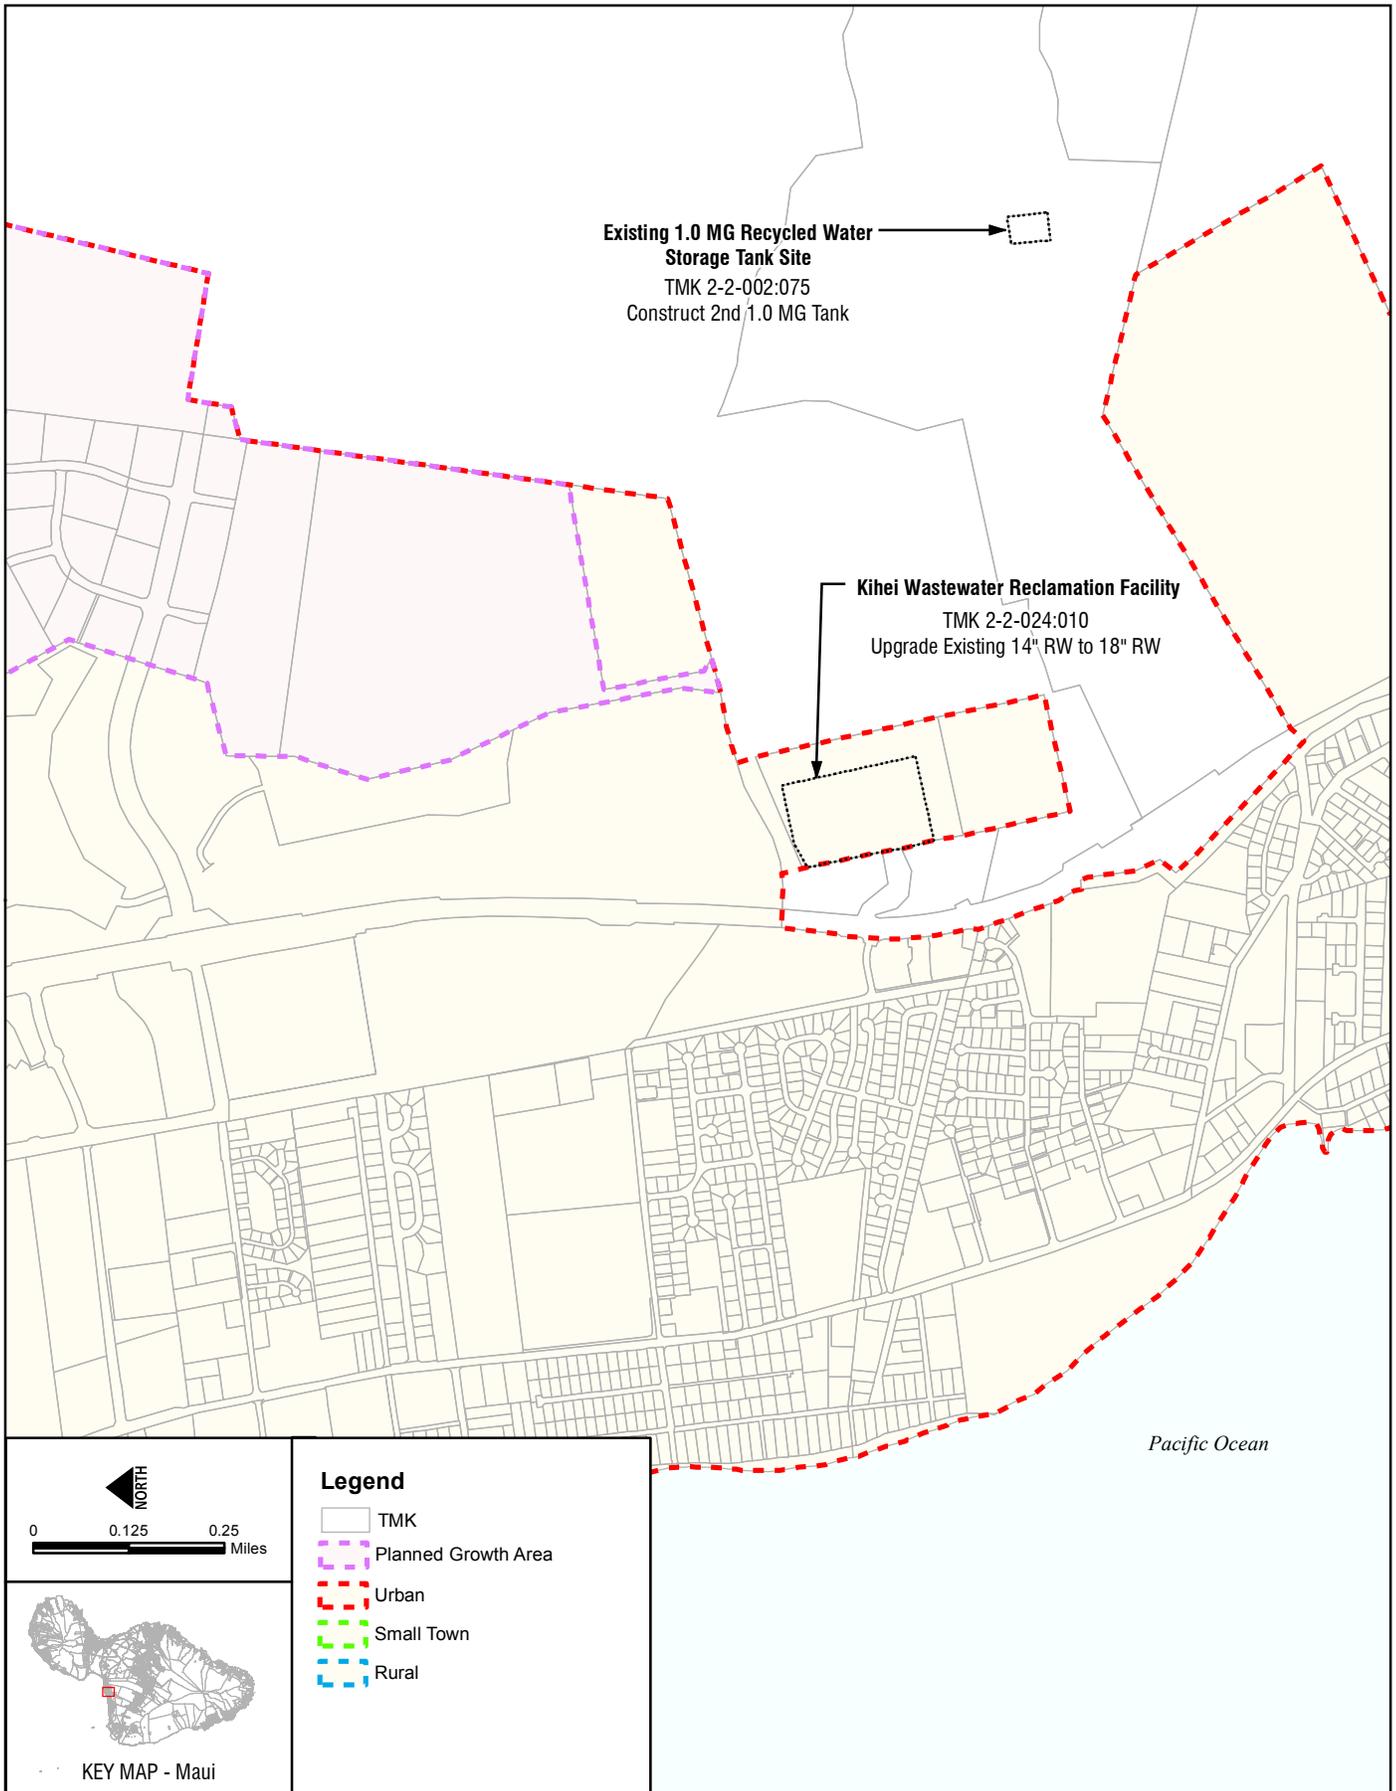

The MIP identifies 11 core values that are intended as a guide to achieving the Maui Island Vision:

- A. *Adopt responsible stewardship principles by applying sound natural resource management practices.*
- B. *Respect and protect our heritage, traditions, and multi-cultural resources.*
- C. *Plan and build communities that include a diversity of housing.*
- D. *Retain and enhance the unique identity and sense of place.*
- E. *Preserve rural and agricultural lands and encourage sustainable agriculture.*
- F. *Secure necessary infrastructure concurrently with future development.*
- G. *Support efforts that contribute to a sustainable and diverse economy for Maui.*
- H. *Create a political climate that seeks and responds to citizen input.*
- I. *Respect and acknowledge the dignity of those who live on Maui.*
- J. *Establish a sustainable transportation system that includes multiple modes, including walking, biking, and mass transit, as well as automobile-based modes.*
- K. *Recognize and be sensitive to land ownership issues and work towards resolution.*

Core values relevant to the proposed project are items A. Adopt responsible stewardship principles by applying sound natural resource management practices and E. Preserve rural and agricultural lands and encourage sustainable agriculture. By increasing the amount of recycled water available, the demands on potable water decrease. An increase in the available recycled water would also encourage sustainable agriculture.

In line with the core values, goals, objectives, policies, and implementation actions for the following nine planning categories are identified by the MIP.

- 1. *Population*
- 2. *Heritage Resources*
- 3. *Natural Hazards*
- 4. *Economic Development*
- 5. *Housing*
- 6. *Infrastructure and Public Facilities*
- 7. *Land Use*
- 8. *Directed Plan Growth*
- 9. *Monitoring & Evaluation*

South Maui Recycled Water System Expansion
 Draft Environmental Assessment

MAUI ISLAND PLAN MAP

The objectives and policies of Chapter 6 Infrastructure and Public Facilities that are relevant to the proposed project are as follows:

WASTEWATER

Objective 6.2.2:

- *Adequate levels of wastewater service with minimal environmental impacts.*

Policy 6.2.2.c:

- *Improve and upgrade the County's existing wastewater collection, treatment, and reuse facilities consistent with current and future plans and the County's Capital Improvement Projects (CIP).*

Objective 6.2.3:

- *Increase the reuse of wastewater.*

Policy 6.2.3.b:

- *Expand the reuse of wastewater from the Central Maui, Kihei, Lahaina, and other wastewater systems.*

The proposed project is consistent with the objectives and policies and serves to maximize wastewater reuse where feasible.

WATER

Objective 6.3.2:

- *Increase the efficiency and capacity of the water systems in striving to meet the needs and balance the island's water needs.*

Policy 6.3.2.c:

- *Maximize the efficient use of reclaimed wastewater to serve nonpotable needs.*

The proposed project will improve the South Maui Recycled Water System which will support existing use and future additional use of non-potable water to meet non-potable water demands, such as irrigation, which might otherwise use potable water. Kihei Mauka is identified in the Maui Island Plan (MIP), General Plan 2030 as a Planned Growth Area, and the population is expected to increase. Maui County currently supplies potable water to Kihei through its Central Maui Public Water System (PWS), the only PWS in the Central Maui District. The Central Maui PWS receives about 75 percent of its water from the Iao Aquifer System Area which was designated as a water management area by the CWRM in 2003, and is pumped at approximately 95 percent of the sustainable yield. The MIP indicates a total projected 2030 potable water demand estimated at 34.11 MGD on the Central Maui system, which exceeds the current 26 MGD supply of the system by 8.11 MGD. The MIP emphasizes that, "Development of additional sources is crucial for the Central Maui System." The proposed project is consistent with the objective and policy and serves to maximize the use of recycled water to meet non-potable needs.

3.4 Kihei-Makena Community Plan

Maui County is divided into nine community plan regions, each governed by its own community plan. The project is located in the Kihei-Makena region, which is governed by the Kihei-Makena Community Plan. The Kihei-Makena Community Plan was first adopted by Ordinance No. 1490 in 1985 and was later updated in 1997. The Kihei-Makena Community Plan (1998) reflects current and anticipated conditions in the Kihei-Makena region and advances planning goals based on desired

land use designations, objectives, policies, and implementation considerations to guide decision-making in the region through the year 2010. The recommendations in the Kihei-Makena Community Plan are intended to address the goals, objectives, and policies contained in the General Plan, while recognizing the values and unique attributes of the Kihei-Makena area in order to enhance the region's overall living environment. Updates to the Kihei-Makena Community Plan to reflect the 2030 MIP goals and policies are not available; therefore the following discussion is based on the 1998 Kihei-Makena Community Plan.

The existing land use designations for the Kihei WWRf and tank site are shown on the Kihei-Makena Community Plan Land Use Maps. The Kihei-Makena Community Plan identifies 16 land use designations. The land use designation for the Kihei WWRf is "P" for "Public/Quasi-Public," and the land use designation for the tank site is "AG" for "Agriculture." See **Figure 9**.

The impacts of the proposed project are consistent with the following goals, objectives, and policies of the Kihei-Makena Community Plan:

Land Use

Goal:

- *A well-planned community with land use and development patterns designed to achieve the efficient and timely provision of infrastructural and community needs while preserving and enhancing the unique character of Ma'alaea, Kihei, Wailea and Makena as well as the region's natural environment, marine resources and traditional shoreline uses.*

Objectives and Policies:

- *Allow special permits in the State Agricultural Districts to accommodate unusual yet reasonable uses including: (1) limited agriculturally related commercial, public and quasi-public uses serving the immediate community; (2) uses clearly accessory or subordinate to a principal agricultural use on the property; (3) public facility uses such as utility installations or landfills whose location depends on technical considerations; and (4) extractive industries, such as quarrying, where the operation would not adversely affect the environment or surrounding agricultural uses.*

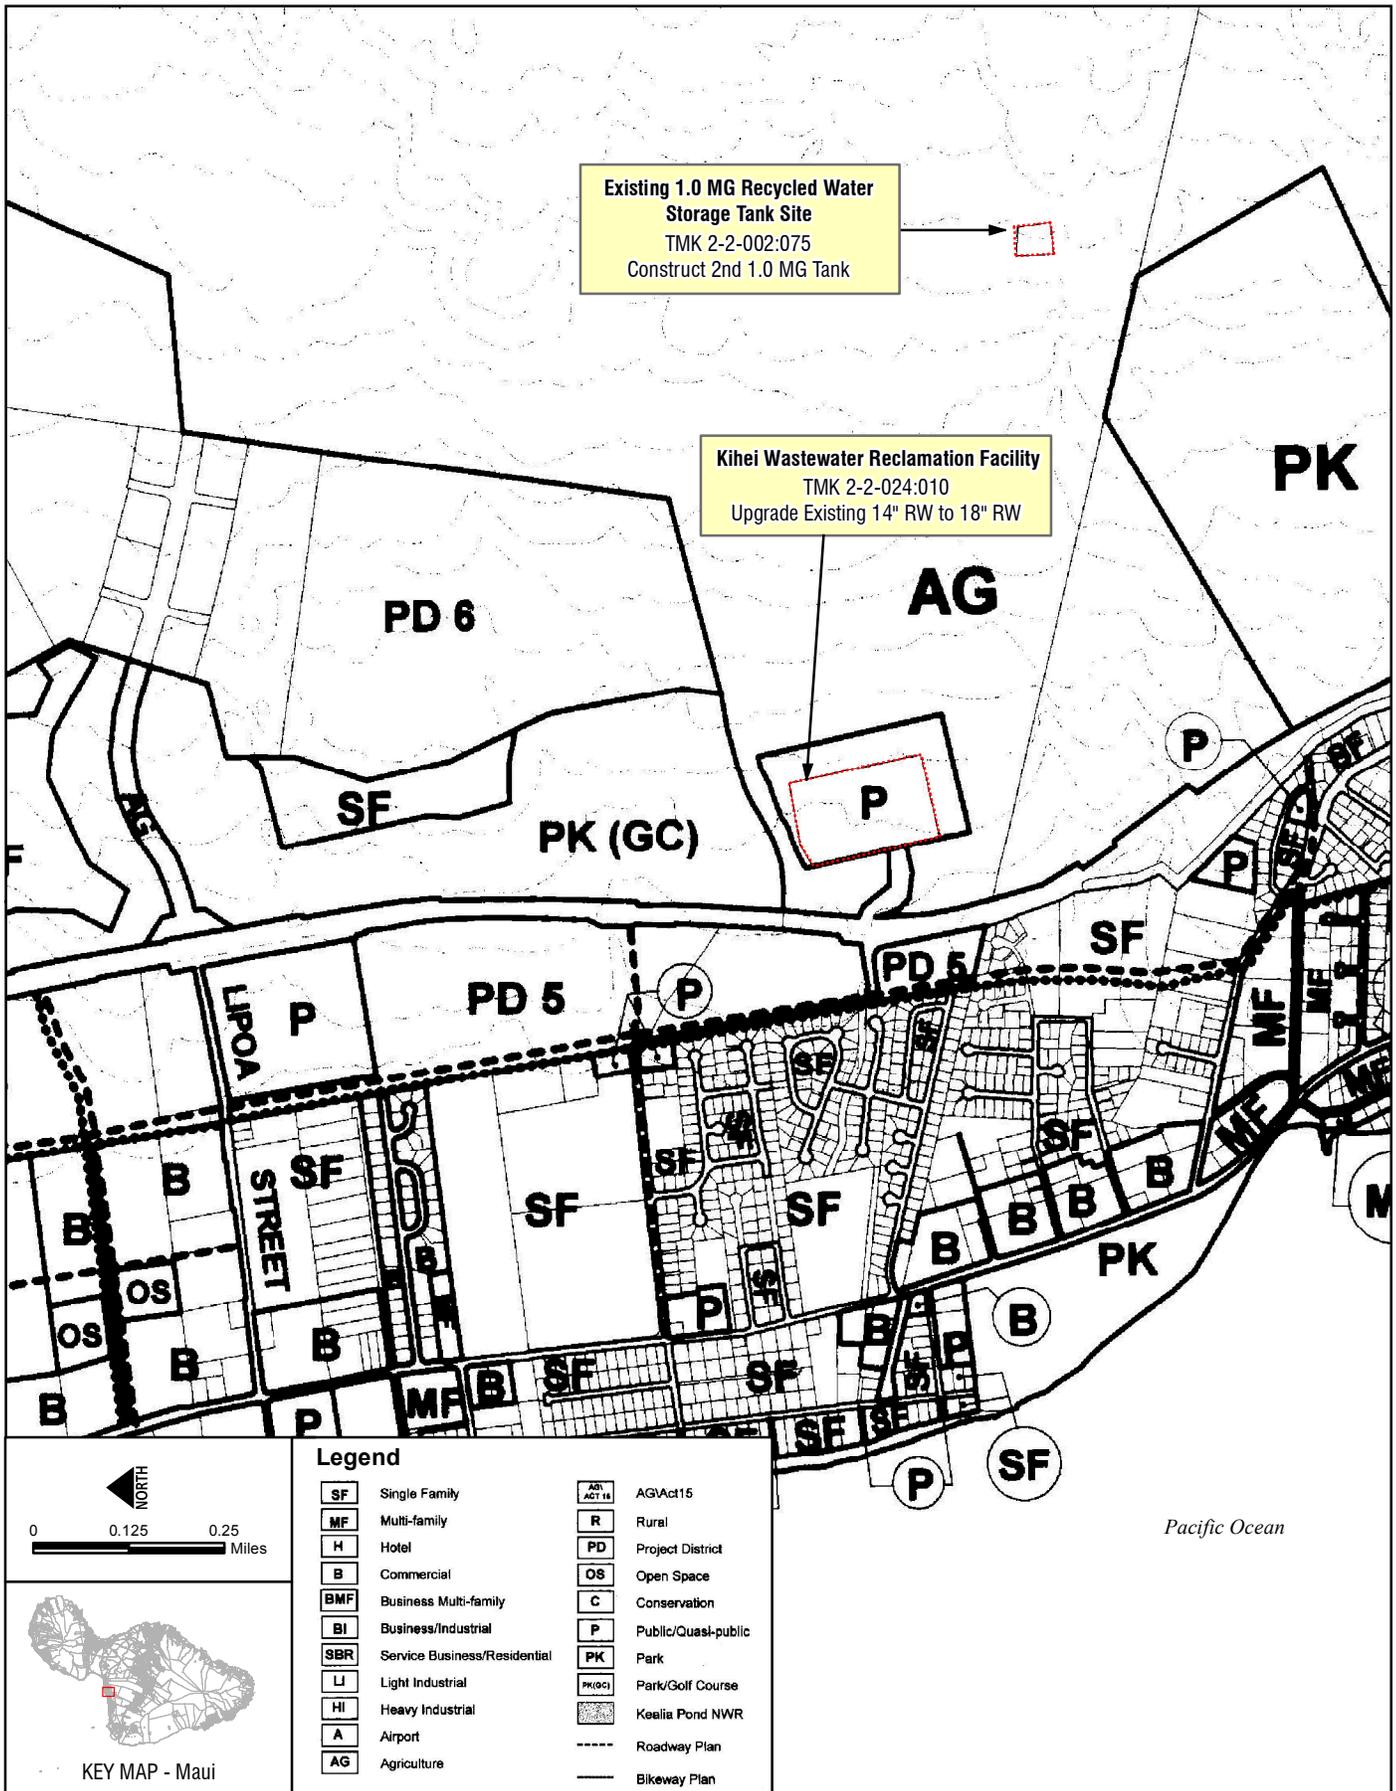

Environment

Goal:

- *Preservation, protection, and enhancement of Kihei-Makena's unique and fragile environmental resources.*

Objectives and Policies:

- *Maintain and enhance the long-term availability of shoreline resources for public enjoyment through adequate access, space, and facility provisions, and through on-going resource management programs.*
- *Protect the quality of nearshore waters by ensuring that land-based discharges meet water quality standards. Continued monitoring of existing and future waste disposal systems is necessary to ensure their efficient operations. Programs should be implemented to reduce the reliance on injection wells for wastewater disposal.*

South Maui Recycled Water System Expansion
 Draft Environmental Assessment

COMMUNITY PLAN LAND USE MAP

Physical and Social Infrastructure

Goal:

- *Provision of facility systems, public services and capital improvement projects in an efficient, reliable, cost effective, and environmentally sensitive manner which accommodates the needs of the Kihei-Makena community, and fully support present and planned land uses, especially in the case of projects district implementation.*

Allow no development for which infrastructure may not be available concurrent with the development's impact.

Objectives and Policies, Water Distribution:

- *Encourage the use of non-potable water for irrigation purposes and water features. Prohibit the use of potable water in large water features or require substantial mitigation fees.*

Objectives and Policies, Liquid and Solid Waste:

- *Coordinate the improvements to sewer transmission lines and wastewater reclamation facilities to meet the needs of future population growth. Require that the Wailea Resort Company and the Wailea Makena Alliance work toward a solution that would enable the Wailea sewerage system to be dedicated to the County.*
- *Provide efficient, safe and environmentally sound systems for the reuse, recycling, and disposal of liquid and solid wastes.*
- *Reduce the reliance on injection wells for wastewater disposal. Require the use of reclaimed effluent -- a procedure which is safe, economical and environmentally sound -- for irrigation of golf courses, parks and landscaped areas.*

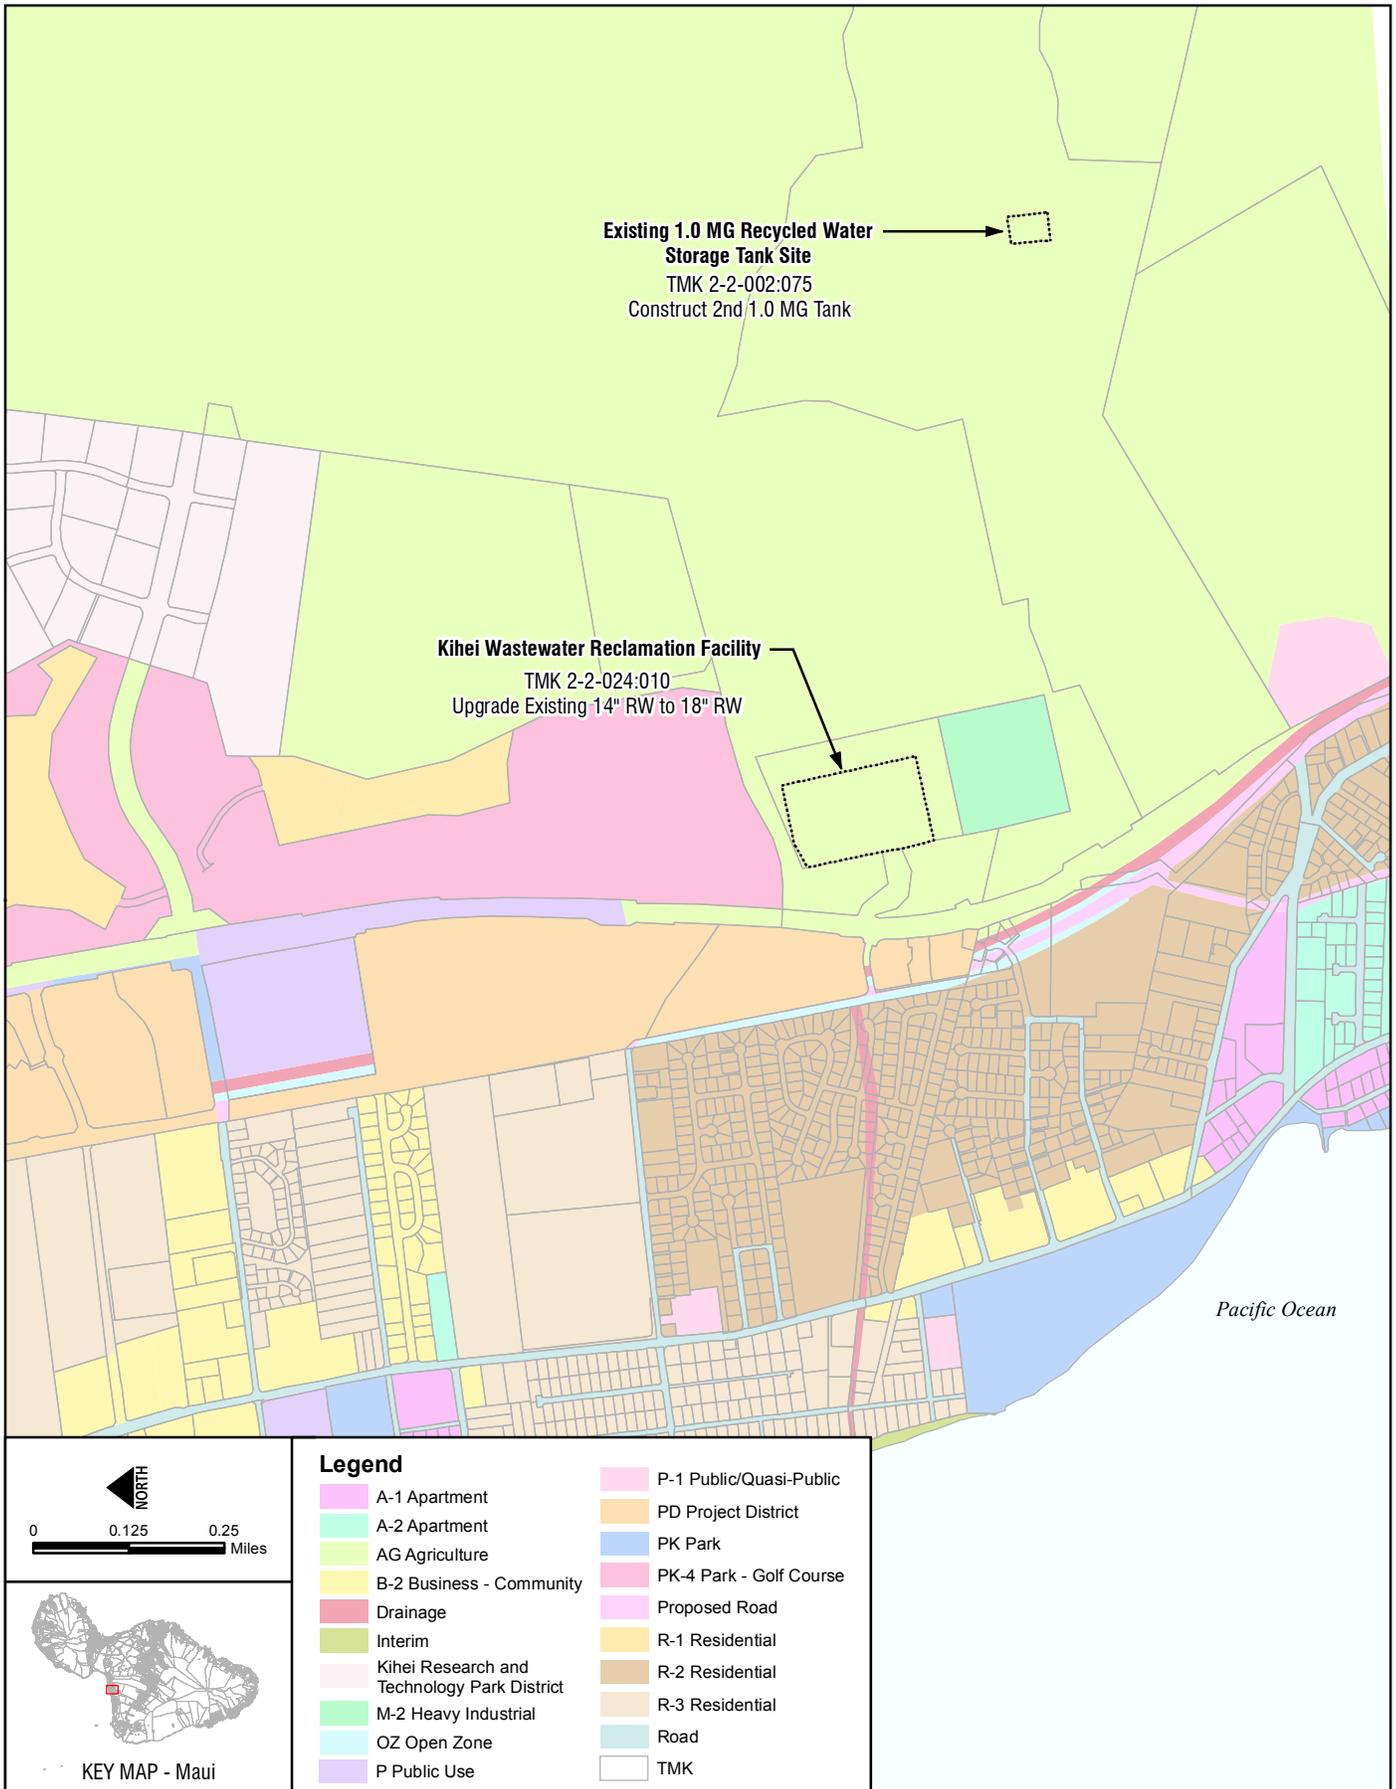

The proposed project is consistent with the aforementioned objectives and policies. A new 1.0 MG recycled water storage tank and pipeline improvements would serve to support a safe and environmentally sound system for recycling, reduce reliance on injection wells for wastewater disposal, and increase the capacity of the recycling system to aid in meeting the needs of future population growth and encourage use of non-potable water for non-potable needs.

3.5 Maui County Zoning

The Kihei WWRf and tank site are currently zoned "Agriculture" by the Maui County Code of Ordinances. See **Figure 10**.

According to Maui County Code Section 19.30A.050 Permitted Uses, uses and structures permitted in the agricultural district include "Minor utility facilities" which is defined in Section 19.04.040 Definitions:

Utility facilities, minor. 'Minor utility facilities' means transmission lines used directly in the distribution of utility services that have minor impact on adjacent land uses which include, but which are not limited to, twenty-three kilovolt transmission substations, vaults, water wells, tanks and distribution equipment, sewage pump stations, and other similar type uses.

3.6 Maui Water Use and Development Plan

The State Water Code (HRS Chapter 174C) was enacted in 1987 to protect and manage Hawaii's surface and ground water resources. The State Water Code requires formulation of the Hawaii Water Plan as the guide for implementing the policy. The Maui County Water Use and Development Plan is one of eight subplans which collectively comprise the Hawaii Water Plan.

The Water Use and Development Plan (WUDP) serves as the long range planning guide for water resource development for all uses of water including recycled water over a 20-year time frame. The WUDP inventories existing water sources and addresses existing and future land uses and related water needs, resource impacts, considers multiple forecasts, and sets forth a program by which water needs will be met. The Maui WUDP, dated March 1990, is currently being updated by the Department of Water Supply. Recycled water is a valuable non-potable water resource. The South Maui Recycled Water System will be included in the Maui WUDP development.

3.7 Flood and Tsunami Hazards

The Flood Hazard Assessment Report is based on the Flood Insurance Rate Map (FIRM) issued by the Federal Emergency Management Agency (FEMA) delineating the floodplain boundaries of various flood zones, and communities' flood base elevations. The Flood Hazard Assessment Report indicates that the Kihei WWRF and tank site are within Zone X. Zone X is an area determined to be outside of the 500 year flood plain and less than 1 foot depth in a 100-year flood event. Zone X is a low to moderate risk flood zone. See **Figure 11a** and **Figure 11b**, Flood Hazard Assessment Report.

3.8 Coastal Zone Management Program

Hawaii's Coastal Zone Management (CZM) Program was approved in 1977 through HRS Chapter 205A Coastal Zone Management subsequent to the passage of the Federal CZM Act in 1972. The program was enacted to provide a common focus for State and County actions dealing with land and water uses and activities; and establishes objectives and policies to preserve, protect, and restore natural resources of Hawaii's coastal zone. Objectives and policies are upheld by the Special Management Area (SMA) permit. The SMA permit regulates permissible land uses that are already allowed by land use policies including zoning designations, county general plans, and community development plans. The SMA area is generally near the coastline and delineated as the area to the west of Pillani Highway. **Figure 12** shows the SMA area with respect to the Kihei WWRF and tank site.

Contact your county floodplain manager for flood zone determinations to be used for compliance with local floodplain management regulations.

FLOOD HAZARD ASSESSMENT TOOL LAYER LEGEND
 (Note: legend does not correspond with NFHL)

SPECIAL FLOOD HAZARD AREAS (SFHAs) SUBJECT TO INUNDATION BY THE 1% ANNUAL CHANCE FLOOD - The 1% annual chance flood (100-year), also known as the base flood, is the flood that has a 1% chance of being equaled or exceeded in any given year. SFHAs include Zone A, AE, AH, AO, V, and VE. The Base Flood Elevation (BFE) is the water surface elevation of the 1% annual chance flood. Mandatory flood insurance purchase applies in these zones:

	Zone A: No BFE determined.
	Zone AE: BFE determined.
	Zone AH: Flood depths of 1 to 3 feet (usually areas of ponding); BFE determined.
	Zone AO: Flood depths of 1 to 3 feet (usually sheet flow on sloping terrain); average depths determined.
	Zone V: Coastal flood zone with velocity hazard (wave action); no BFE determined.
	Zone VE: Coastal flood zone with velocity hazard (wave action); BFE determined.
	Zone AEF: Floodway areas in Zone AE. The floodway is the channel of stream plus any adjacent floodplain areas that must be kept free of encroachment so that the 1% annual chance flood can be carried without increasing the BFE.

NON-SPECIAL FLOOD HAZARD AREA - An area in a low-to-moderate risk flood zone. No mandatory flood insurance purchase requirements apply, but coverage is available in participating communities.

	Zone XS (X shaded): Areas of 0.2% annual chance flood; areas of 1% annual chance flood with average depths of less than 1 foot or with drainage areas less than 1 square mile; and areas protected by levees from 1% annual chance flood.
	Zone X: Areas determined to be outside the 0.2% annual chance floodplain.

OTHER FLOOD AREAS

	Zone D: Unstudied areas where flood hazards are undetermined, but flooding is possible. No mandatory flood insurance purchase apply, but coverage is available in participating communities.

S Maui Recycled WtrSys 2

Property Information

COUNTY: MAUI
 TMK NO: (2) 2-2-024:010
 WATERSHED: HAPAPA
 PARCEL ADDRESS: 480 PILANI HWY
 KIHU, HI 96753

Notes:

Flood Hazard Information

FIRM INDEX DATE: NOVEMBER 04, 2015
 LETTER OF MAP CHANGE(S): NONE
 FEMA FIRM PANEL: 1500030588G
 PANEL EFFECTIVE DATE: NOVEMBER 04, 2015

THIS PROPERTY IS WITHIN A TSUNAMI EVACUATION ZONE: NO
 FOR MORE INFO, VISIT: <http://www.scd.hawaii.gov/>

THIS PROPERTY IS WITHIN A DAM EVACUATION ZONE: NO
 FOR MORE INFO, VISIT: <http://dlnreng.hawaii.gov/dam/>

Disclaimer: The Hawaii Department of Land and Natural Resources (DLNR) assumes no responsibility arising from the use, accuracy, completeness, and timeliness of any information contained in this report. Viewers/Users are responsible for verifying the accuracy of the information and agree to indemnify the DLNR, its officers, and employees from any liability which may arise from its use of its data or information.

If this map has been identified as 'PRELIMINARY', please note that it is being provided for informational purposes and is not to be used for flood insurance rating. Contact your county floodplain manager for flood zone determinations to be used for compliance with local floodplain management regulations.

FLOOD HAZARD ASSESSMENT TOOL LAYER LEGEND

[Note: legend does not correspond with NFHL]

SPECIAL FLOOD HAZARD AREAS (SFHAs) SUBJECT TO INUNDATION BY THE 1% ANNUAL CHANCE FLOOD - The 1% annual chance flood (100-year), also known as the base flood, is the flood that has a 1% chance of being equaled or exceeded in any given year. SFHAs include Zone A, AE, AH, AD, V, and VE. The Base Flood Elevation (BFE) is the water surface elevation of the 1% annual chance flood. Mandatory flood insurance purchase applies in these zones:

	Zone A: No BFE determined.
	Zone AE: BFE determined.
	Zone AH: Flood depths of 1 to 3 feet (usually areas of ponding); BFE determined.
	Zone AD: Flood depths of 1 to 3 feet (usually sheet flow on sloping terrain); average depths determined.
	Zone V: Coastal flood zone with velocity hazard (wave action); no BFE determined.
	Zone VE: Coastal flood zone with velocity hazard (wave action); BFE determined.
	Zone AEF: Floodway areas in Zone AE. The floodway is the channel of stream plus any adjacent floodplain areas that must be kept free of encroachment so that the 1% annual chance flood can be carried without increasing the BFE.

NON-SPECIAL FLOOD HAZARD AREA - An area in a low-to-moderate risk flood zone. No mandatory flood insurance purchase requirements apply, but coverage is available in participating communities.

	Zone XS (X shaded): Areas of 0.2% annual chance flood; areas of 1% annual chance flood with average depths of less than 1 foot or with drainage areas less than 1 square mile; and areas protected by levees from 1% annual chance flood.
	Zone X: Areas determined to be outside the 0.2% annual chance floodplain.

OTHER FLOOD AREAS

	Zone D: Unstudied areas where flood hazards are undetermined, but flooding is possible. No mandatory flood insurance purchase apply, but coverage is available in participating communities.
--	--

The Kihei WWRF and tank site are to the east of Piilani Highway; therefore, permits associated with the CZM intended to uphold CZM objectives and policies within the SMA and Shoreline Setback are not applicable. The project meets the objectives and policies set forth in HRS Section 205A-2 as discussed below:

1. Recreational Resources

Objective: *Provide coastal recreational opportunities accessible to the public.*

Policies:

- a. *Improve the coordination and funding of coastal recreational planning and management*
- b. *Provide adequate, accessible, and diverse recreational opportunities in the coastal zone management area by:*
 - i. *Protecting coastal resources uniquely suited for recreational activities that cannot be provided in other areas;*
 - ii. *Requiring replacement of coastal resources having significant recreational value including, but not limited to, surfing sites, fishponds, and sand beaches, when such resources will be unavoidably damaged by development; or requiring reasonable monetary compensation to the State for recreation when replacement is not feasible or desirable;*
 - iii. *Providing and managing adequate public access, consistent with conservation of natural resources, to and along shorelines with recreational value;*
 - iv. *Providing an adequate supply of shoreline parks and other recreational facilities suitable for public recreation;*
 - v. *Ensuring public recreational uses of county, state, and federally owned or controlled shoreline lands and waters having recreational value consistent with public safety standards and conservation of natural resources;*
 - vi. *Adopting water quality standards and regulating point and nonpoint sources of pollution to protect, and where feasible, restore the recreational value of coastal waters;*
 - vii. *Developing new shoreline recreational opportunities, where appropriate, such as artificial lagoons, artificial beaches, and artificial reefs for surfing and fishing; and*
 - viii. *Encouraging reasonable dedication of shoreline areas with recreational value for public use as part of discretionary approvals or permits by the land use commission, board of land and natural resources, and county authorities; and crediting such dedication against the requirements of section 46-6, HRS.*

Response: The project sites are located inland to the east of Piilani Highway away from the coastline, outside of the area regulated by SMA and Shoreline Setback permitting. Based on the location of the project, no impacts are anticipated on recreational opportunities or on public access to the shoreline.

2. Historic Resources

Objective: *Protect, preserve, and, where desirable, restore those natural and manmade historic and prehistoric resources in the coastal zone management area that are significant in Hawaiian and American history and culture.*

Policies:

- a. *Identify and analyze significant archaeological resources;*
- b. *Maximize information retention through preservation of remains and artifacts or salvage operations; and*
- c. *Support state goals for protection, restoration, interpretation, and display of historic resources.*

Response: An Archaeological Field Inspection was performed for the project sites. No historic properties were identified. Further, due to the shallow nature of soils in the project areas and heavily modified landscape (mechanical grading and use), there seems little possibility that historical properties would occur in subsurface contexts. No adverse impacts on historical and archaeological sites are anticipated. In the event that human skeletal remains are inadvertently discovered during construction, the requirements in HRS Section 6.E-43.6 “Inadvertent discovery of burial sites,” will be met. All contractors shall ensure that the remains shall not be moved and any activity in the immediate area that could damage the remains or the potential historic site shall cease, and SHPD, the appropriate medical examiner or coroner, and police department shall be contacted.

3. Scenic and Open Space Resources

Objective: *Protect, preserve, and, where desirable, restore or improve the quality of coastal scenic and open space resources.*

Policies:

- a. *Identify valued scenic resources in the coastal zone management area;*
- b. *Ensure that new developments are compatible with their visual environment by designing and locating such developments to minimize the alteration of natural landforms and existing public views to and along the shoreline;*
- c. *Preserve, maintain, and, where desirable, improve and restore shoreline open space and scenic resources; and*
- d. *Encourage those developments that are not coastal developments to locate in inland areas.*

Response: The proposed project does not lie within a coastal scenic corridor or near the shoreline. The proposed site improvements include piping improvements below grade at the Kihei WWRF and a 1.0 MG tank of similar height and construction to the existing tank at the tank site. Agricultural lands surround the tank site and the closest public road is Piilani Highway approximately 4,000 feet from the tank site. The visual impact of the proposed project is expected to be insignificant.

4. Coastal Ecosystems

Objective: *Protect valuable coastal ecosystems, including reefs, from disruption and minimize adverse impacts on all coastal ecosystems.*

Policies:

- a. *Exercise an overall conservation ethic, and practice stewardship in the protection, use, and development of marine and coastal resources;*
- b. *Improve the technical basis for natural resource management;*

- c. *Preserve valuable coastal ecosystems, including reefs, of significant biological or economic importance;*
- d. *Minimize disruption or degradation of coastal water ecosystems by effective regulation of stream diversions, channelization, and similar land and water uses, recognizing competing water needs; and*
- e. *Promote water quantity and quality planning and management practices that reflect the tolerance of fresh water and marine ecosystems and maintain and enhance water quality through the development and implementation of point and nonpoint source water pollution control measures.*

Response: The project sites are located inland to the east of Piilani Highway away from the coastline, outside of the area regulated by SMA and Shoreline Setback permitting. Based on the location of the project, no impacts are anticipated on the coastal ecosystem as a result of the proposed project.

5. Economic Uses

Objective: *Provide public or private facilities and improvements important to the State's economy in suitable locations.*

Policies:

- a. *Concentrate coastal dependent development in appropriate areas;*
- b. *Ensure that coastal development such as harbors and ports, and coastal related development such as visitor industry facilities and energy generating facilities, are located, designed, and constructed to minimize adverse social, visual, and environmental impacts in the coastal zone management area and;*
- c. *Direct the location and expansion of coastal dependent developments to areas presently designated and used for such developments and permit reasonable long-term growth at such areas, and permit coastal dependent development outside of presently designated areas when:*
 - i. *Use of presently designated locations is not feasible;*
 - ii. *Adverse environmental effects are minimized; and*
 - iii. *The development is important to the State's economy.*

Response: The project sites are located inland to the east of Piilani Highway away from the coastline. In addition, these proposed public facilities will be located at existing public facility sites.

6. Coastal Hazards

Objective: *Reduce hazard to life and property from tsunami, storm waves, stream flooding, erosion, subsidence, and pollution.*

Policies:

- a. *Develop and communicate adequate information about storm wave, tsunami, flood, erosion, subsidence, and point and nonpoint source pollution hazards;*
- b. *Control development in areas subject to storm wave, tsunami, flood, erosion, hurricane, wind, subsidence, and point and nonpoint source pollution hazards;*

- c. *Ensure that developments comply with requirements of the Federal Flood Insurance Program; and*
- d. *Prevent coastal flooding from inland projects.*

Response: The project sites are located inland to the east of Piilani Highway away from the coastline, outside of the area regulated by SMA and Shoreline Setback permitting and away from storm waves. The project sites are to the east of Piilani Highway within Zone X, determined to be outside the 0.2% annual chance floodplain. BMPs will be implemented during the construction phase to mitigate erosion and storm water discharge from the project sites.

7. Managing Development

Objective: *Improve the development review process, communication, and public participation in the management of coastal resources and hazards.*

Policies:

- a. *Use, implement, and enforce existing law effectively to the maximum extent possible in managing present and future coastal zone development;*
- b. *Facilitate timely processing of applications for development permits and resolve overlapping or conflicting permit requirement; and*
- c. *Communicate the potential short and long-term impacts of the proposed significant coastal developments early in their life cycle and in terms understandable to the public to facilitate public participation in the planning and review process.*

Response: The environmental review process set forth in HRS Chapter 343, ensures that environmental concerns are given appropriate consideration in decision making along with economic and technical considerations and integrates public notification and participation in development of the proposed project.

8. Public Participation

Objective: *Stimulate public awareness, education, and participation in coastal management.*

Policies:

- a. *Promote public involvement in coastal zone management processes;*
- b. *Disseminate information on coastal management issues by means of educational materials, published reports, staff contact, and public workshops for persons and organizations concerned with coastal issues, developments, and government activities; and*
- c. *Organize workshops, policy dialogues, and site-specific mediations to respond to coastal issues and conflicts.*

Response: The environmental review process set forth in HRS Chapter 343, ensures that environmental concerns are given appropriate consideration in decision making along with economic and technical considerations and integrates public notification and participation in development of the proposed project.

9. Beach protection

Objective: *Protect beaches for public use and recreation.*

Policies:

- a. *Locate new structures inland from the shoreline setback to conserve open space, minimize interference with natural shoreline processes, and minimize loss of improvements due to erosion;*
- b. *Prohibit construction of private erosion-protection structures seaward of the shoreline, except when they result in improved aesthetic and engineering solutions to erosion at the sites and do not interfere with existing recreational and waterline activities; and*
- c. *Minimize the construction of public erosion-protection structures seaward of the shoreline.*

Response: The project sites are located inland, to the east of Piilani Highway away from the shoreline. Therefore, there are no anticipated impacts on beach resources.

10. Marine Resources

Objective: *Promote the protection, use, and development of marine and coastal resources to assure their sustainability.*

Policies:

- a. *Ensure that the use and development of marine and coastal resources are ecologically and environmentally sound and economically beneficial;*
- b. *Coordinate the management of marine and coastal resources and activities to improve effectiveness and efficiency;*
- c. *Assert and articulate the interests of the State as a partner with federal agencies in the sound management of ocean resources within the United States exclusive economic zone;*
- d. *Promote research, study, and understanding of ocean processes, marine life, and other ocean resources in order to acquire and inventory information necessary to understand how ocean development activities relate to and impact upon ocean and coastal resources; and*
- e. *Encourage research and development of new, innovative technologies for exploring, using, or protecting marine and coastal resources.*

Response: The project sites are located inland to the east of Piilani Highway away from the coastline, outside of the area regulated by SMA and Shoreline Setback permitting. Based on the location of the project, no impacts are anticipated on the marine and coastal resources as a result of the proposed project.

3.9 Underground Injection Control (UIC)

The Underground Injection Control (UIC) Program is one of several programs administered by the State DOH Safe Drinking Water Branch. The UIC Program serves to protect Hawaii's underground sources of drinking water from chemical, physical, radioactive, and biological contamination that could originate from injection well activity. HAR Chapter 11-23 Underground Injection Control, provides conditions governing the location, construction, and operation of injection wells to prevent injected fluids from migrating and polluting aquifers designated as sources of drinking water. The boundary between aquifers designated as sources of drinking water and exempted aquifers is generally referred to as the "UIC Line."

This project does not include work related to locating, constructing, or operating an injection well, and is therefore not subject to the conditions of the UIC Program. In addition, the Kihei WWRF, tank site, and existing recycled water service area are below the UIC Line, where the underlying aquifer is not considered a drinking water source. See **Figure 13** for the location of the UIC Line with respect to the Kihei WWRF and tank site.

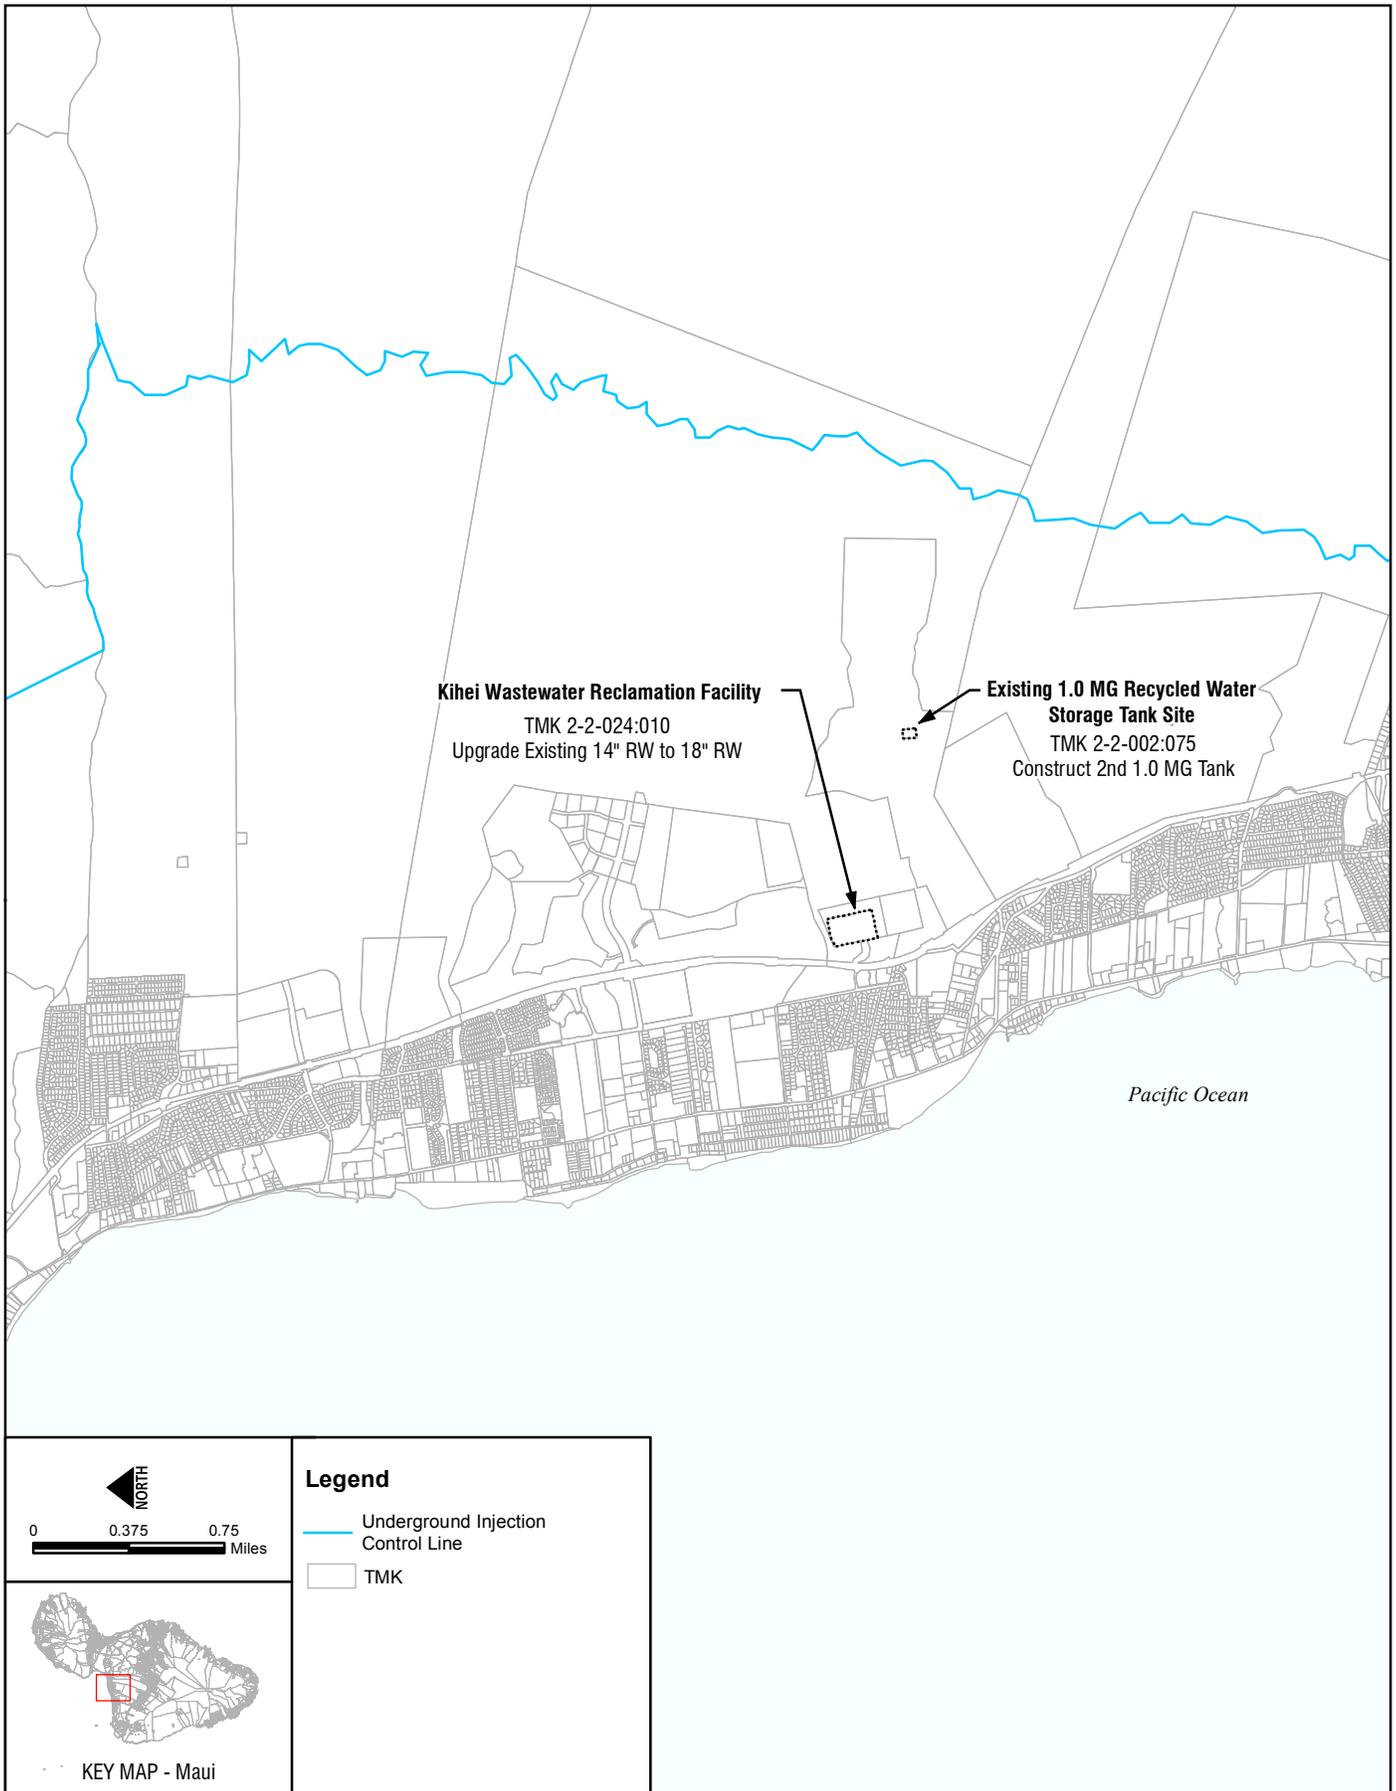

4. FEDERAL CROSS-CUTTER AUTHORITIES

This project may be funded by Federal Funds through the State of Hawaii's Clean Water State Revolving Fund (SRF) Program, which would constitute a federal action, and will require the project to meet the National Environmental Policy Act (NEPA) and Hawaii SRF program requirements. The Clean Water SRF was established by the U.S. Congress in 1987 under the Water Quality Act. The intent of the Clean Water SRF is to assist with the construction of publicly owned treatment facilities, implementation of non-point source projects to address pollution, and the development and implementation of estuary comprehensive conservation and management plans.

4.1 Archaeological & Historic Preservation Act, National Historic Preservation Act

The Archaeological & Historic Preservation Act, 16 U.S.C. §469a-1, deals with the threat of loss or destruction of significant data by Federal construction projects; notification and request for preservation of data; and survey of sites, preservation of data and compensation. The National Historic Preservation Act (NHPA) of 1966 requires the consideration of the effect of any project on any district, site, building, structure, or object that is included in or eligible for inclusion in the National Register. In addition, Section 106 of the NHPA requires consideration of the effects of a project with federal involvement on historic properties. Section 106 is applicable to the project if a federal agency is carrying out the project, approving it, or funding it.

As described in the Archaeological and Historical Sites section, an Archaeological Field Inspection was performed for the project sites which involved historical and archaeological background research of the area, a field inspection to identify surface archaeological sites or features, and an assessment of the potential impacts to such features. Results indicated extensive prior ground disturbance and an absence of historic properties. No historic sites were identified and it was determined that there is little possibility that historic properties would occur in subsurface contexts. As such, a formal Archaeological Inventory Survey of the property is not recommended. A request for a "No Effect" determination from SHPD will be submitted.

The Section 106 review process was initiated for this project in accordance with 36 CFR Part 800. Section 106 consultation letters were sent to organizations or individuals that might attach significance to the Area of Potential Effect (APE), defined as the Kihei WWRF and tank site, inviting them to participate in the process and identify any historic properties that may possess Native Hawaiian traditional religious and cultural significance or other Native Hawaiian cultural concerns. The DOH has concluded that no sites of historical importance within the APE are expected to be affected by the project and has requested concurrence from SHPD.

Should the discovery of potential archaeological or historical resources occur during construction, all work in the area of the find shall stop and SHPD shall be notified. The Historic Preservation Officer will determine what will be necessary for construction to proceed.

4.2 Clean Air Act

The Clean Air Act, 42 U.S.C. §7506(c), requires each State to develop a State Implementation Plan (SIP) delineating how Federal air quality standards will be attained and how this will be verified. The DOH, Clean Air Branch, Air Quality program is defined by HAR Chapter 11-60 and is a SIP approved by the Environmental Protection Agency (EPA).

As discussed in the Air Quality section, the quality of air in the general Kihei area is considered “Good.” Existing sources of air pollution are emissions from motor vehicles traveling along Piilani Highway. Potential short term effects from dust and exhaust due to construction activities will be mitigated with BMPs such as water sprinkling and proper equipment maintenance. No long term impacts on air quality resulting from the proposed project are anticipated.

4.3 Coastal Barrier Resources Act

The Coastal Barrier Resources Act, 16 U.S.C §3501, designated various undeveloped, unprotected coastal barriers on the Atlantic Ocean and Gulf of Mexico coasts, and is not applicable to the State of Hawaii.

4.4 Coastal Zone Management Act

As discussed in the CZM Program section, HRS Chapter 205A sets forth Hawaii’s CZM Program, which is in compliance with the Coastal Zone Management Act, 16 U.S.C. 1456(c)(1). HRS §205A-2 describes the CZM program, its objectives, and policies.

The proposed project is consistent with CZM objectives and policies. In addition, the SMA area is to the west of Piilani Highway, and the Kihei WWRF and tank site are located to the east of Piilani Highway, outside of the areas regulated by SMA and Shoreline Setback permitting.

4.5 Endangered Species Act, Fish & Wildlife Coordination Act, Essential Fish Habitat

The Endangered Species Act, 16 U.S.C. §1536(a)(2) and (4), is administered by the United States Fish & Wildlife Service (USFWS) and NOAA, National Marine Fisheries Service. The USFWS has primary responsibility for terrestrial and freshwater organisms, while NOAA is mainly responsible for marine wildlife. NOAA is also the agency consulted under the Essential Fish Habitat consultation process under the Magnuson-Stevens Fishery Conservation and Management

Act, 16 U.S.C. §1801. The Fish and Wildlife Coordination Act (FWCA), 16 U.S.C. §662(a), provides the basic authority for USFWS involvement in evaluating impacts of proposed water resource development projects on fish and wildlife, and requires Federal agencies to take actions to prevent or mitigate loss or damage to wildlife resources.

The Kihei WWRF and tank site are existing public facility sites, and the proposed facilities are consistent with the existing use of the sites. No essential fish habitat will be impacted by the proposed project. Fauna in the vicinity of the project sites typically consists of introduced animals such as rats, mongoose, and alien birds; the area is not known to be inhabited by endangered species.

4.6 Environmental Justice Executive Order

Executive Order 12898 signed in 1994, directs federal agencies to identify and address disproportionately high adverse human health or environmental effects of its activities on minority and low-income populations.

The percentage of minorities in the Kihei Census Designated Place (CDP) is 49.3 percent, which is significantly higher than the national average of 27.6 percent. However, the 2010 – 2014 median household income of \$63,804 was generally higher than the national average of \$53,482. The design and operation of recycled water facilities, and allowable use of recycled water are highly regulated and monitored in accordance with the HAR 11-62 Wastewater Systems and the 2016 Hawaii State DOH Reuse Guidelines. Negative short term and long term health impacts associated with this project are not anticipated.

4.7 Farmland Protection Policy Act

The Agriculture and Food Act (Public Law 97-98) was passed in 1981 and contained the Farmland Protection Policy Act (FPPA), Subtitle I of Title XV, Section 1539-1549. The intent of the FPPA was to minimize the impacts of Federal programs on prime farmland, unique farmland, and other land of statewide or local importance. It is administered by the USDA, National Resources Conservation Service. The three categories of farmland described in FPPA are translated to the DOA, ALISH classifications of “Prime,” “Unique,” and “Other” agricultural lands.

The Kihei WWRF and tank site are entirely within lands not considered for ALISH classification. Upgrades on the Kihei WWRF are within the existing facility, where no additional land will be utilized. The proposed site of the 1.0 MG recycled water storage tank at the existing tank site will utilize a fraction of land available for agriculture. Further, the proposed project will enhance the recycled water distribution system which provides an important non-potable water resource for agricultural irrigation.

4.8 Floodplain Management Executive Order

The objective of Executive Order 11988 is to avoid to the extent possible the adverse impacts associated with the occupancy and modification of flood plains and to avoid direct and indirect support of floodplain development wherever there is a practicable alternative. To accomplish this objective, “each agency shall provide leadership and shall take action to reduce the risk of flood loss, to minimize the impact of floods on human safety, health, and welfare, and to restore and preserve the natural and beneficial values served by flood plains in carrying out its responsibilities.”

As discussed in the Flood and Tsunami Hazard section, the Kihei WWRF and tank site are located in Zone X, which is an area determined to be outside of the 500 year plain and less than 1 foot depth in a 100 year flood event. This project will not have an effect on the flood plain.

4.9 Protection of Wetlands Executive Order

The purpose of Executive Order 11990 is to “minimize the destruction, loss or degradation of wetlands and to preserve and enhance the natural and beneficial values of wetlands.” Federal agencies, to meet these objectives, in planning their actions are required to consider alternatives to wetland sites and limit potential damage if an activity affecting a wetland is unavoidable. The procedures require the determination of whether or not the proposed project will be in or will affect wetlands.

There are no wetlands in the vicinity of the Kihei WWRF and tank site. Executive Order 11990 is not applicable to this project. See **Figure 14**.

4.10 Safe Drinking Water Act

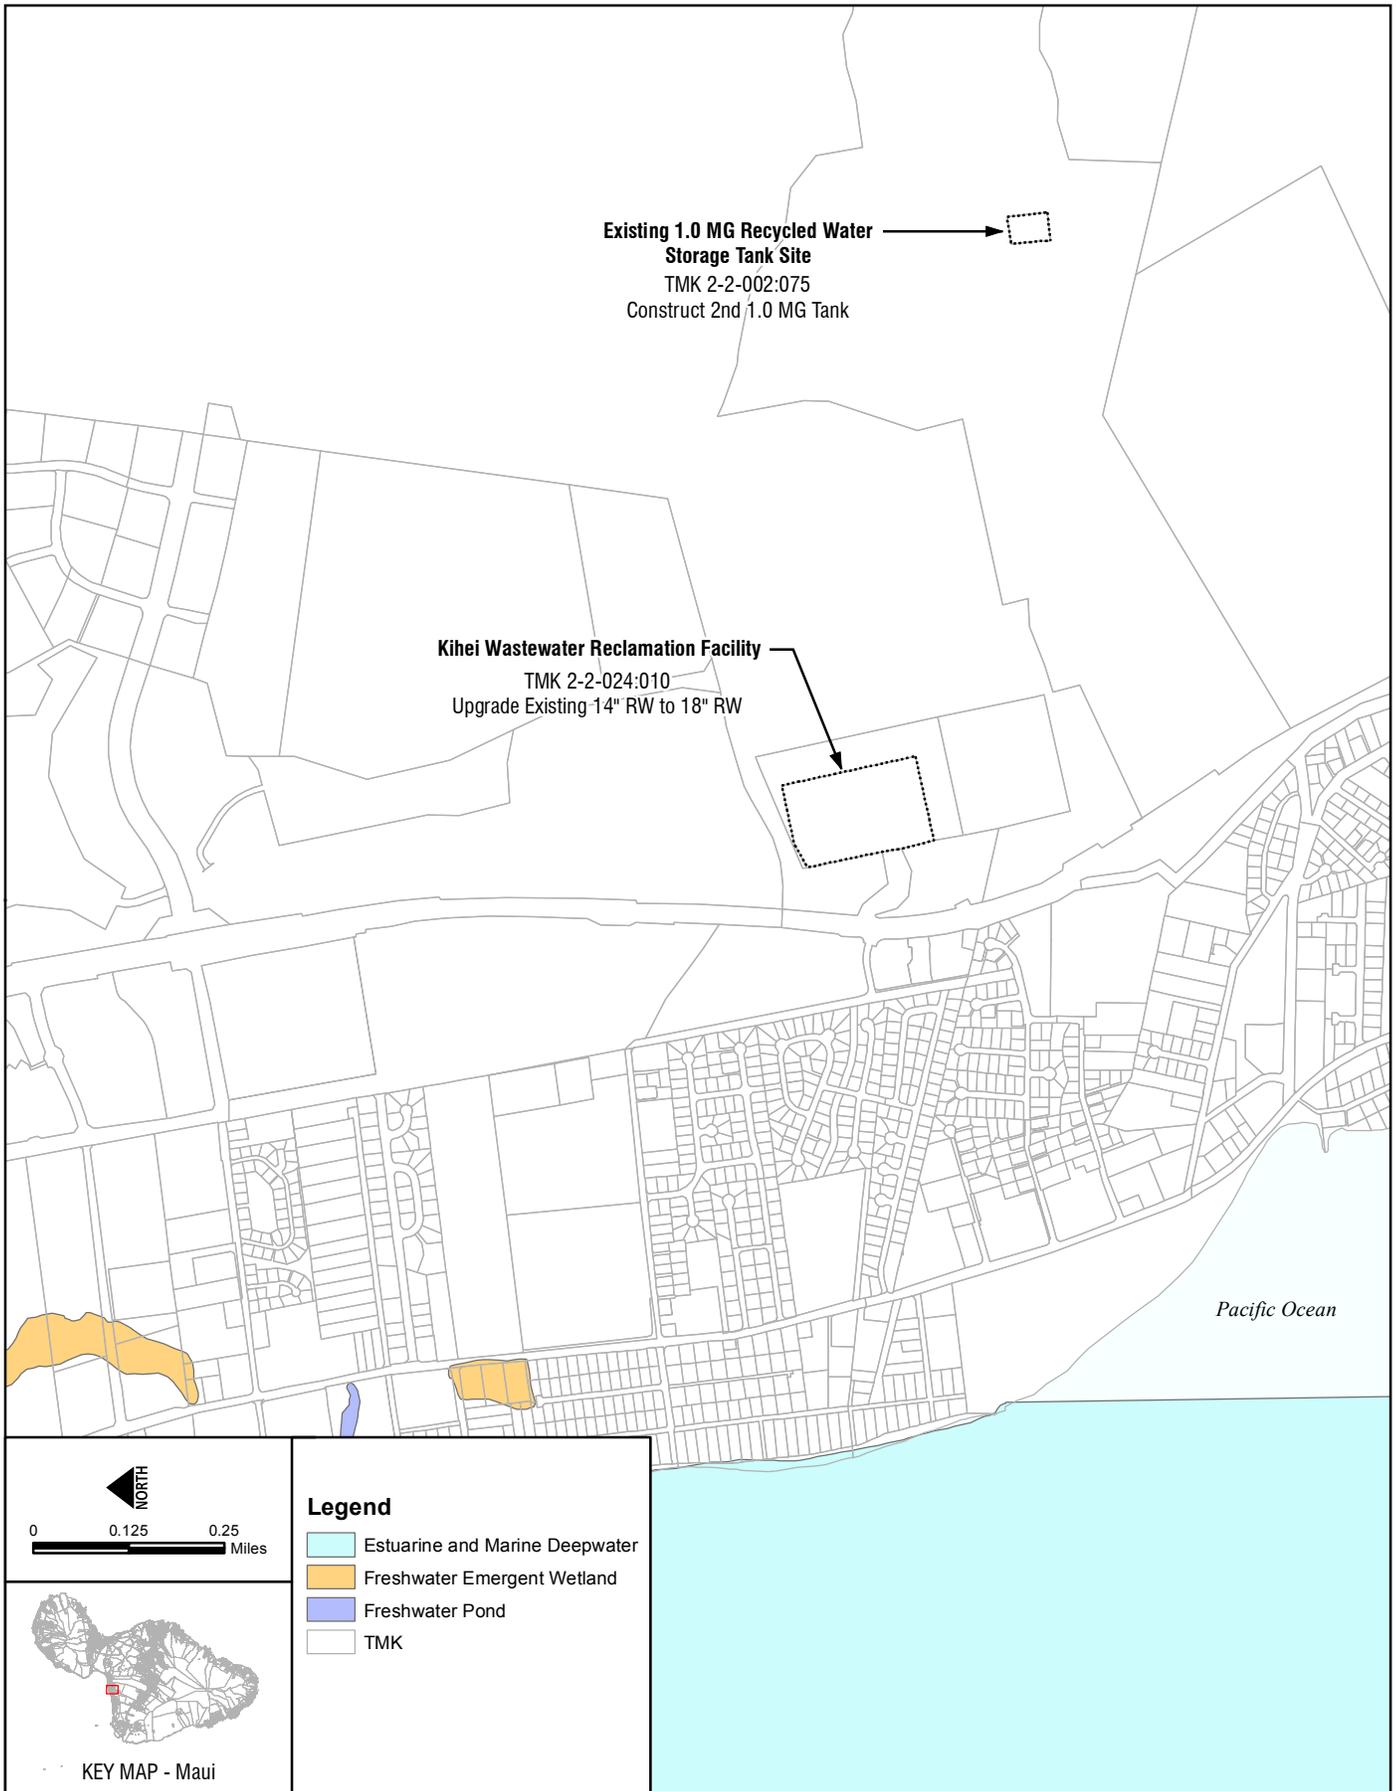

The Safe Drinking Water Act (SDWA), 42 U.S.C. §300f was established to protect the quality of all waters actually or potentially designed for drinking use from both underground and aboveground sources. The SDWA authorizes EPA to establish minimum standards to protect potable water with which all owners or operators of public water systems must comply; to oversee the agencies which can be approved to implement these rules on EPA’s behalf, such as State governments; and to encourage attainment of secondary standards (nuisance-related). The SDWA also establishes the Sole Source Aquifer Program, under which EPA also may evaluate Federal-funded projects to determine whether they have the potential to contaminate a sole source aquifer.

As discussed in the Underground Injection Control section, the Kihei WWRF, tank site, and existing recycled service areas are below the UIC Line to the west, where the underlying aquifer is not considered a drinking water source. At present, there are two sole source aquifers in the State of Hawaii, the Southern Oahu Basal Aquifer on the island of Oahu and the Molokai Aquifer on the island of Molokai. The Kihei WWRF and tank sites are on the island of Maui, and are not within either aquifer.

4.11 Wild & Scenic Rivers Act

The Wild and Scenic Rivers Act, 16 U.S.C. 1271-1287, declares that certain selected rivers with their immediate environments, possess outstandingly remarkable scenic, recreational, geologic, fish and wildlife, historical, cultural, or other similar values, shall be preserved in their free-flowing condition for the enjoyment of present and future generations.

The State of Hawaii has approximately 3,905 miles of river, but no designated wild and scenic rivers. The Wild & Scenic Rivers Act is not applicable to this project.

5. ALTERNATIVES TO THE PROPOSED ACTION

5.1 No Action

Under the No Action alternative, current levels of reuse would be limited by the existing 1.0 MG recycled water storage tank capacity, and all of the remaining recycled water would continue to be disposed of, unused, into injection wells. A policy (9.3.2.c) of the Maui Island Plan to maximize the efficient use of reclaimed wastewater would not be met and use of the deep injection wells would not be reduced. The Maui Island Plan projects an estimated 2030 potable water demand of 34.11 MGD, which exceeds the available supply of 26 MGD from the Central Maui Water System. The potential shortage in potable water appears to indicate an even greater need for recycled water to be available. In addition, County of Maui Ordinance, Chapter 20.30 – Use of Reclaimed Water, requires irrigation systems on commercial properties to use recycled water if a distribution main is within one hundred feet of the consumer’s property line. Without a new 1.0 MG recycled water storage tank, recycled water availability and reliability would be potentially limited by the existing 1.0 MG recycled water storage tank.

5.2 Site Alternatives

Relative to other areas in Maui, South Maui had a considerable interest in utilizing recycled water according to the “South Maui Water Reuse Feasibility Study,” by Brown and Caldwell, dated 1992. Potential major users of the reclaimed water included ranchers, golf courses, and resorts. Problems with high salinity and the potential increase in salinity due to continual extraction of brackish water identified the need for an alternative high quality water source in Kihei.

Locating the new 1.0 MG recycled water storage tank in an area outside of the existing tank site would require acquisition of additional lands and new transmission mains to connect the alternate tank site to the existing distribution system. Operations and maintenance of a new 1.0 MG recycled water storage tank in a separate location from the existing tank would also require more time. Alternative sites within Kihei, outside of the existing tank site is not as practical and economical as the tank site identified in this proposed project.

6. DETERMINATION

In accordance with the Hawaii Administrative Rules, Section 11-200-12, the potential effects of the proposed project are evaluated for the Thirteen Administrative Criteria for Significance as summarized below:

1. Involves an irrevocable commitment to loss or destruction of any natural or cultural resource:

No natural or cultural resource was identified in or affected by the proposed project. The proposed project is therefore not expected to cause a loss or destruction of any natural or cultural resources.

2. Curtails the range of beneficial uses of the environment:

The proposed project is enhancing the beneficial uses of the environment, as it increases the capacity and reliability of the existing recycled water system, making available more recycled water in the area to better serve the community. Short term construction related impacts on the environment related to Water Quality, Air Quality, and Noise Quality will be mitigated by the implementation of BMPs as indicated in the respective sections. The proposed project will not curtail the range of beneficial uses of the environment.

3. Conflicts with the state's long term environmental policies or goals and guidelines as expressed in [Chapter] 344, HRS and any revisions thereof and amendments thereto, court decisions, or executive orders:

The proposed project is in conformance with the guidelines set forth in the State Environmental Policy Chapter 344, HRS. All permits and approvals in accordance with State and County rules and regulations will be obtained. BMPs will be implemented to prevent degradation of the environmental conditions.

4. Substantially affects the economic or social welfare and cultural practices of the community or State:

The proposed project will serve to increase the capacity and reliability of the existing South Kihei Recycled Water System, provide redundancy, allow for less dependency on potable water resources, and decrease effluent disposal into injection wells. The proposed project will indirectly have a positive effect on the economic and social welfare of the community. Infrastructure that supports an increase in available recycled water will assist in sustaining a growing community.

5. Substantially affects public health:

Negative impacts on public health resulting from the proposed project are not anticipated. State and Federal regulatory oversight provides a framework to ensure the safe use of recycled water covering treatment, distribution and use. The South Maui Recycled Water Distribution System delivers R-1 recycled water, the highest grade of recycled water, in accordance with the DOH regulations. Recycled water can only be applied in approved areas as defined by the DOH; and end users must be trained and are regulated by the County and DOH. Recycled water users must observe BMPs to reduce the potential for percolation of the recycled water to the ground water and runoff to surface water; and to minimize public contact with recycled water spray or mist. Design considerations include applying recycled water at a rate appropriate to plant uptake and evapotranspiration rates, and not irrigating during rainy periods; proper selection of sprinkler heads in publicly accessible areas; and protection of items such as drinking fountains, picnic tables, barbeques, and portable water coolers from exposure to recycled water or mist. Operational considerations include scheduling and limiting times of application when the chances of exposure are lowest (e.g. 11 pm to 3 am).

6. Involves substantial secondary impacts, such as population changes or effects on public facilities:

The proposed project is limited to upsizing a 400-foot section of pipe at the Kihei WWRF and construction of a new 1.0 MG recycled water storage tank, which will increase the capacity and reliability of the existing South Maui Recycled Water System. A substantial increase in population is unlikely as a result of the proposed project.

7. Involves a substantial degradation of environmental quality:

BMPs will be implemented to mitigate potential short term degradation of the environment which may occur during construction. The project will enhance the environment, limiting disposal of treated effluent and supporting the expanded use of a valuable alternative water resource.

8. Is individually limited but cumulatively has considerable effect upon the environment or involves a commitment for larger actions:

The proposed project will increase the amount of recycled water available to accommodate additional users. As indicated in the Maui Island Plan, Kihei Mauka in Central Maui is identified as a Planned Growth area that will encompass more than 583 acres of mixed land uses, including open spaces, parks, and other public facilities. Increasing the amount of recycled water available will support conservation of potable water where the highest quality of water is used for the community's highest beneficial uses. The project will not have cumulative negative effects upon the environment.

9. Substantially affects a rare, threatened, or endangered species, or its habitat:

The project will not substantially affect a rare, threatened, or endangered species, or its habitat.

10. Detrimentially affects air or water quality or ambient noise levels:

Short term effects on air quality, water quality, and noise impacts during construction will be addressed by BMPs, including an NPDES application as necessary.

11. Affects or is likely to suffer damage by being located in an environmentally sensitive area such as a flood plain, tsunami zone, beach, erosion-prone area, geologically hazardous land, estuary, fresh water or coastal waters:

The Kihei WWRF and tank site are located to the east of Piilani Highway, away from the coastline outside of the area regulated by SMA and Shoreline Setback permitting, and are not anticipated to have adverse impacts on coastal waters or resources. As discussed in the Flood and Tsunami Hazard section, the Kihei WWRF and the tank site are located outside of the 500 year flood plain and less than 1 foot depth in a 100-year flood event, and are not considered vulnerable to flood and tsunamis.

12. Substantially affects scenic vistas and view planes identified in county or state plans or studies:

The Kihei WWRF and tank site are located on the east side of Piilani Highway. The pipe improvements at the Kihei WWRF are below ground. The proposed 1.0 MG recycled water storage tank site is located at approximately 300 feet in elevation MSL adjacent to the existing 1.0 MG recycled water storage tank of similar dimensions. Adverse impacts to scenic or open space resources resulting from the project are not anticipated.

13. Requires substantial energy consumption:

Operation and maintenance of the new 1.0 MG recycled water storage tank will involve minimal energy consumption. The existing recycled water system is already in use, and additional substantial consumption of energy is not anticipated.

This Environmental Assessment has determined that the proposed project will not have significant impact on the environment, and an EIS is therefore unwarranted. A Finding of No Significant Impact (FONSI) determination is issued for the proposed project.

6.1 List of Permits and Approvals

The following list of permits and approvals are anticipated to be required for the proposed project:

State of Hawaii

1. National Pollutant Discharge Elimination System (NPDES) Permit, if applicable.
2. Community Noise Permit, if applicable.
3. Department of Health Approval to Construct.
4. Department of Health Approval to Use.

County of Maui

1. Construction Permits, as applicable.

7. CONSULTED PARTIES

An Early Consultation Letter was sent to various agencies and interested parties for the opportunity to provide preliminary comments prior to completing the Draft Environmental Assessment. Subsequently, comments were received during the 30-day public comment period on the Draft Environmental Assessment. The agencies and interested parties are listed below. Comments received and responses provided are incorporated in **Appendices B** and **C**.

INTRODUCTION

Scientific Consultant Services, Inc. conducted an Archaeological Field Inspection and background study for the proposed construction of a 1.0 million gallon (MG) water storage tank, adjacent to an existing 1.0 MG water storage tank and replacement of a pipeline segment at the Kihei Wastewater Reclamation Facility, located in Waiohuli-Keokea Ahupua`a, Kihei, Maui Island, Hawai'i [TMK: (2) 2-2-24: por. 010 & 011; (2) 2-2-02: por. 075] (Figures 1 and 2).

Fieldwork for this project was conducted on January 7th, 2016, by SCS archaeologist Nicole Andricci, B.A. and under the supervision of M. Dega, Ph.D. (Principal Investigator). The Archaeological Field Inspection was conducted on the grounds of the existing Kihei Wastewater Reclamation Facility for the proposed 1.0 MG tank installation and replacement of an existing pipeline segment for the County of Maui Wastewater Reclamation Division. The area was assessed for the potential presence of historic properties (including archaeological sites, buildings, structures, and Traditional- and Historic-era cultural materials).

The scope of work for this investigation included:

- Historical and previous archaeological background research including previous archaeological reports conducted in the vicinity of the project area corridor, Land Commission Awards, and historic maps in order to determine if archaeological sites have been recorded on or near this property, and to document the history of land use in and around the project area.
- Field inspection of the project areas to identify surface archaeological sites or features and to investigate and assess the potential for impact to such sites or features.
- Preparation of the current letter report which will include the results of the historical research and the fieldwork and make recommendations as to what additional work, if any, might be required.

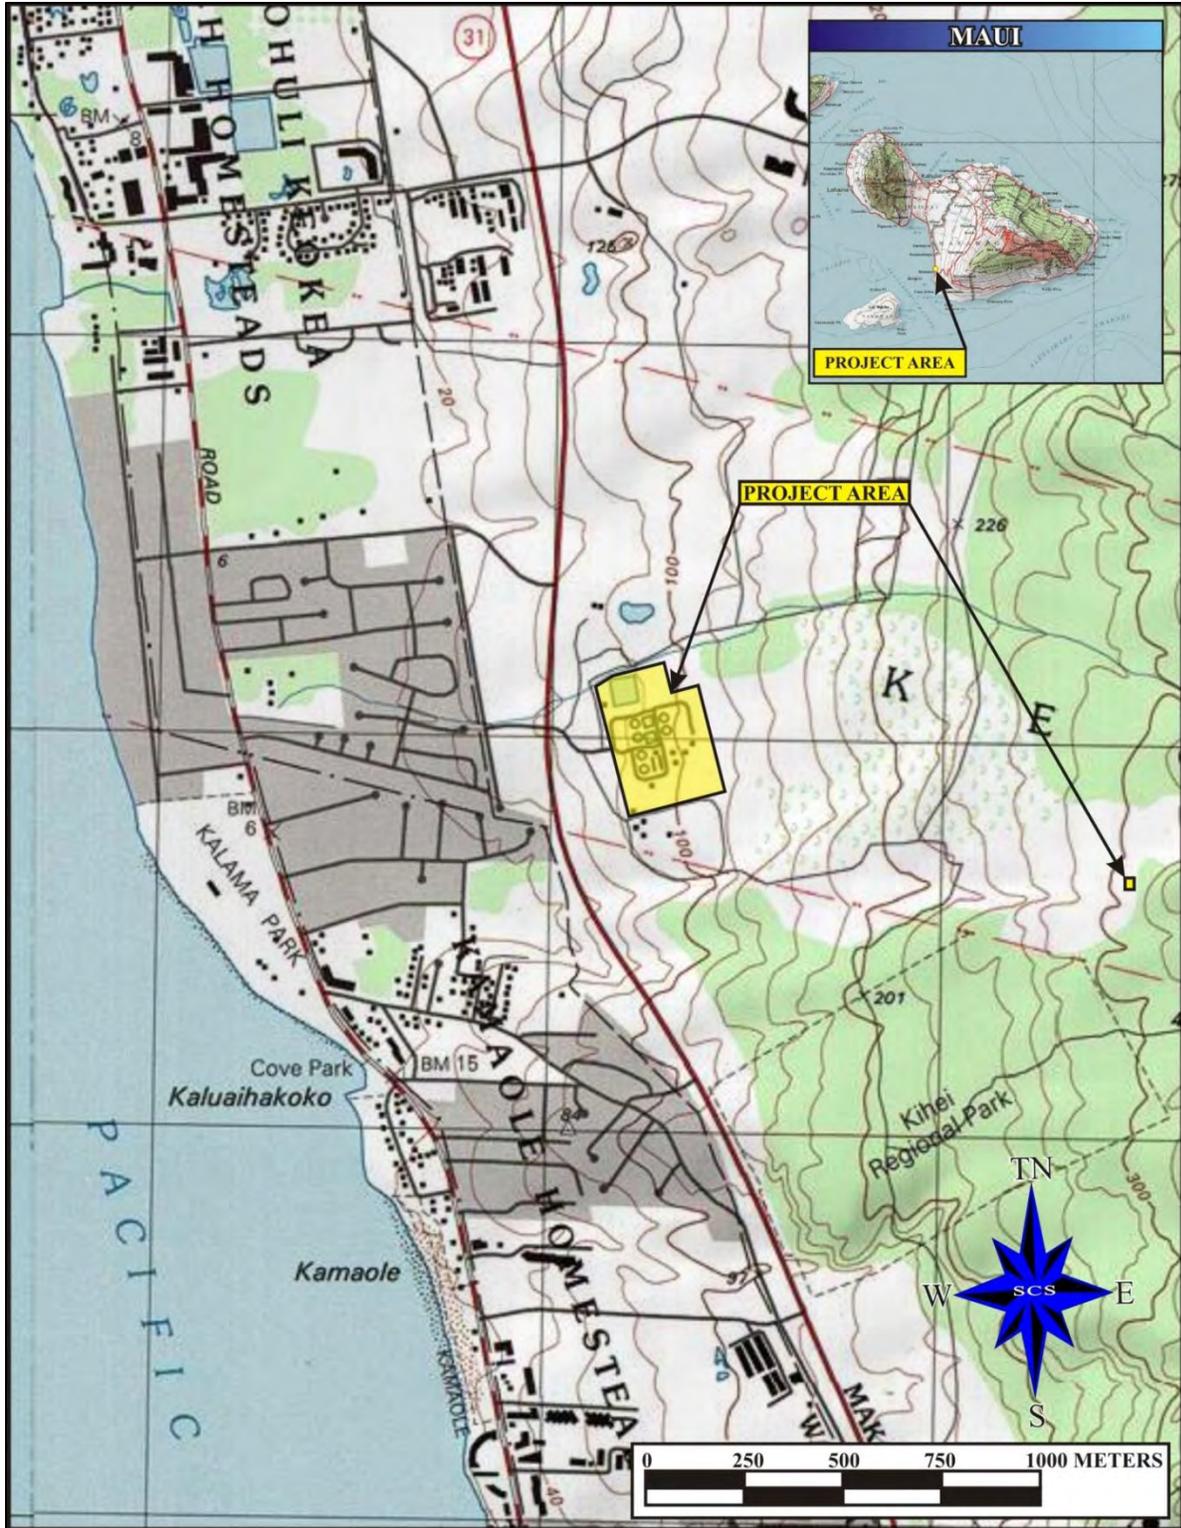

Figure 1: USGS Topographic (Puu O kali 1992; 1:24,000) Map Showing Project Area Location.

The parcels are owned by the County of Maui. The location where the 1.0 MG tank is proposed to be placed is on open, barren land with an existing 1.0 MG tank adjacent to the project area. The purpose of the Field Inspection was to determine the presence or absence of architecture, midden deposits, and/or artifact deposits on the surface of the project area, as well as assess the potential for the presence of subsurface cultural deposits.

NATURAL SETTING

The project area that will contain the proposed 1.0 MG water storage tank is 290 feet by 200 feet and is roughly rectangular-shaped, with elevations ranging from 295 feet to 310 feet A.M.S.L. Adjacent to the proposed location of the 1.0 MG water storage tank is an existing 1.0 MG tank. There are two project areas, one is located within the Kihei Wastewater Reclamation Facility that will include the proposed replacement of an existing pipeline segment, while the second project area is located within Monsanto Company lands and is where the proposed location will be for the 1 MG water storage tank (Figures 3 through 8).

The project area soils are classified by the USDA as “Waiakoa extremely stony silty clay loam” (Foote et al. 1972). These soils form on smooth, low uplands, and stones cover 3 to 15 percent of the ground surface. In most areas where this soil occurs, approximately 50 percent of the surface layer has been eroded. Because of this erosion, bedrock is very common on the surface, rendering soil depths nil. Runoff levels are average, and the erosion hazard is severe. For these reasons, soils in the project area are generally only good for pastureland and wildlife habitat. Low bedrock outcrops are commonly associated with these soils, and cultivation is usually impractical unless the stones are removed (Foote et al. 1972:127).

Coastal Kīhei, in general, is classified as a ‘*Kiawe* and Lowland Shrubs’ vegetation zone, and common, local plants include: *kiawe* (*Prosopis pallida*), *koa haole* (*Leucaena glauca*), finger grass, and *pili* grass, (the latter is a native species) (Armstrong 1983).

Annual rainfall in the project area ranges between 22 and 33 centimeters annually and is the lowest on Maui, making this region one of the driest in the Hawaiian Islands archipelago (Armstrong 1983). At the time of the present survey, the subject parcel was exceptionally dry, consistent with a period of prolonged drought in the area.

PREVIOUS ARCHAEOLOGICAL RESEARCH

Work by Cordy (1977) in the Kīhei area resulted in a pre-Contact settlement model that divides the landscape into three environmental zones: coastal, transitional/barren, and inland. The current project area falls into the transitional/barren zone, which refers to “the slopes back of the coast with less than 30 inches of rainfall” (Cordy 1977:4). This barren zone is viewed as relatively marginal for permanent habitation because of its dryness, rocky soils, and dearth of natural resources. In general, archaeological surveys in the barren zone around Kīhei have confirmed these earlier suppositions about land use as there was very little evidence of pre-Contact Native Hawaiian settlement.

Cox (1976) surveyed near the project area along the corridor of the Pi`ilani Highway and failed to notice a single site or significant feature. Kirch (1985) examined similar geographic settings to the south (towards Makena) and also failed to find any evidence of traditional Native Hawaiian activities in the barren zone. In fact, as Kennedy (1986) observes, this settlement pattern of avoiding the barren zone probably continued from ancient times through the early historic period as Land Commission Awards (LCA) were issued for land situated in the further upland reaches.

Within the two phases of the Pi`ilani Residential Community, four archaeological studies have been conducted. Cordy (1977) and Donham (1989 and 1990) documented a total of 23 sites including wall segments, small structures, cairns, historic structures, enclosures and agricultural features. The surface features were interpreted as traditional Hawaiian (with the exception of the concrete structure remnants) related to temporary habitation and agricultural pursuits. Based on similar findings in leeward East Maui, it was suggested that the “features within the survey area postdate c. AD 1500” (Donham, 1990:15).

Kennedy (1986) conducted an archaeological reconnaissance of the entire 150.032 acres of the then-proposed Maui Research and Technology Park (TMK: 2-2-02, since changed to 2-2- 24), situated 3 km north of the project area. Kennedy’s study, which did not include subsurface testing (excavation), concluded that no archaeological sites or features were located within the proposed site.

Hammatt and Shideler (1989) conducted work across Pi`ilani Highway west of the proposed Kīhei Regional Park area between the highway and the coast. This project led to

the identification of a historic ranch site, possible burials, a C-shaped structure, and a midden scatter.

Hammatt and Shideler (1992) also conducted an inventory survey in the *makai* portion of Kama`ole Ahupua`a and documented a disturbed traditional Hawaiian site. As noted by Hammatt and Shideler (1992:10), “what is particularly striking in the many archaeological reports on Kihei is the general paucity of sites within the transitional or barren zone.”

Theresa Donham conducted an archaeological reconnaissance of the Haleakala Greens Subdivision area (Hibbard 1994). She identified a low, circular rock mound, a historical site with multiple features on the crest of a prominent ridge, a linear rock mound or wall remnant, a rock- filled terrace outlined with a low, rock wall, and other modifications along a rock outcrop. Shell midden was observed on the surface inside an enclosure.

Chaffee *et al.* (1997) conducted an Archaeological Inventory Survey, including subsurface testing (excavation), of a portion of the Maui Research and Technology Park, within the area investigated by Kennedy (1986). Three sites consisting of ten archaeological features were identified. The features included remnant terraces, stone alignments, a mound, and a modified outcrop. All of the sites were interpreted as agricultural in function with the exception of a rock mound that may have functioned as a religious feature.

Mayberry and Haun (1998) conducted a survey south of the present project area. This work led to the identification of 33 sites consisting of at least 69 features, these interpreted as agricultural, habitation, and military structures.

McGerty *et al.* (2000) surveyed fifteen selected areas within the Elleair Maui Golf Club, and identified five archaeological sites (State Site Nos. 50-50-10-5043, -5044, -5045, -5046, and -5047) containing a total of seven surface features. The surface features were interpreted as agricultural terraces, perhaps dating from the pre-Contact period, and C-shaped rock formations (fighting positions) built during World War II training. Ten excavation units placed within these features yielded no cultural material.

McDermott (2001) conducted an archaeological inventory survey for a retention basin adjacent to the project area on the south side of Waipuilani Gulch. In total, four

historic properties were located within the project area and three additional located just outside the parcel. The sites consisted of stone cairns, modified outcrop enclosures, terraces, stone mounds and alignments. The sites were thought to be traditional Hawaiian temporary habitations or ancillary features associated with the habitations. McDermott states that site densities are typically quite low within the “barren zone” with multiple studies having been conducted on large parcels (Kennedy 1986, Watanabe 1987, Hammatt and Shideler 2000) that did not lead to the identification of any pre-Contact sites. However, military sites related to World War II training exercises have been previously documented in the area (McGerty *et al.* 2000), these sites often consisting of low, short alignments or walls. The few radiocarbon dates acquired from the area indicate definitive use of the landscape in later prehistory c. A.D. 1500 to 1600+.

Tome and Dega (2002) conducted an Inventory Survey on a 3.142-acre parcel located approximately 400 m inland from the Kama`ole coastline where one traditional archaeological site, four surface midden scatters, and a basalt alignment were identified. Interpretations of the survey reflected that the property had been utilized as a single-use site due to absence of subsurface cultural material from 14 stratigraphic trenches excavated on the parcel. Like this project, most of the ones mentioned above occurred just to the west of coastal sand deposits in what is commonly known as the “Barren Zone”. However, while some archaeological surveys were productive, there were those along the coast that were not. Namely, Calis’ (2001) Inventory Survey directly in sandy sediment along Kamaole did not lead to the documentation of occupation or burials.

Tome and Dega (2002) also conducted an Archaeological Inventory Survey along the northeastern flank of the Elleair Maui Golf Club property. They identified a historical ranching corral and a short agricultural wall, collectively designated State Site No. 50-50-10-5233. No other structures or subsurface deposits were identified. No traditional Native Hawaiian sites or features were identified. Another Inventory Survey along the southern flank of the Elleair Maui Golf Course (Dega 2003) failed to yield any archaeological or historical site or features.

A more recent Inventory Survey (Dega and Tome 2003) conducted in Kihei Town also failed to yield significant deposits or burials in sandy substrate. Recent exceptions to this rule have been seen in Waiakoa Ahupua`a (Hamada-Takatani Subdivision at TMK: 3-9-006:40) where a fairly large number of burials and possible burials have been identified (Rotunno- Hazuka n.d.).

Monahan (2003) conducted an Archaeological Inventory Survey, including subsurface testing (excavation), of a 28.737-acre portion of the Maui Research and Technology Park, also within the area investigated by Kennedy (1986), situated immediately upslope (*mauka*) of Lot No. 1-B. Other than one surface feature—a small arrangement of stacked boulders interpreted as a ‘push pile,’ this survey yielded no evidence of historic or prehistoric significance.

Monahan (2004) also surveyed a 56 acre parcel located near Elleair Golf Course. Four surface features, consisting of stacked basalt stones, were identified and recorded as individual sites. Three of these sites were interpreted as traditional Hawaiian temporary habitation and work areas. Unfortunately two of the sites failed to yield datable materials and the other returned a modern radiocarbon date (0+/- 50 BP).

Shefcheck, *et al* (2008) conducted an Archaeological Inventory Survey of 516 acres of land in Ka`ono`lulu Ranch which included a portion of the present project area. Forty new archaeological sites were identified and recorded during this work. Of the forty sites recorded during this work, eight are associated with pre-Contact activities. These pre-Contact sites consisted of temporary rock shelters with petroglyph components, enclosures, platforms, a mound and a wall. Historic sites found during this work pertained to agriculture and military training activities.

An Archaeological Inventory Survey was conducted by Perzinski and Dega (2010) in association with the construction of the Kihei High School in Kihei, Ka`ono`ulu, Kōheo 1 & 2 and Waiohuli Ahupua`a, Wailuku and Makawao District, Island of Maui, Hawai`i. Fieldwork was conducted in 2009 and the report being accepted in 2010. One site was documented during the study: SIHP No.: 50-50-10-6393. Site -6393 is a complex of eight (8) features located in the northeastern portion of the project area. The site is located on a relatively level portion of the project area, approximately 300 m from Pi`ilani Highway at an elevation of 20 m A.M.S.L. The eight features consist of a series of low mounds and one alignment constructed of basalt cobbles and boulders. Based on site type, site morphology, lack of cultural deposits, and location, the site and its component features were interpreted as being associated with the historic period ranching activities.

In all, no archaeological sites have previously been identified within or directly adjacent to the project area.

FIELD INSPECTION

A field inspection of the area of potential effect/project area was conducted on January 7th, 2016, by SCS archaeologist Nicole Andricci, B.A., under the supervision of M. Dega, Ph.D. (Principal Investigator). The pedestrian survey consisted of walking 3 m transects over the entirety of the project area, and taking notes on the landscape, natural materials, and any other observations of interesting, particularly previous and modern land use.

The project areas are located at the Kihei Wastewater Reclamation Facility (replacement of pipeline segment) and within Monsanto Company lands (1.0 MG water storage tank placement). No historic properties were observed on the ground surface, which itself had been heavily modified through time (mechanical grading and use). Portions of the project area also consist of a contemporary built environment, as observed in the above photographs. Given the shallow nature of soils in this area, as well as the above noted landscape modifications, there seemed little possibility that historic properties would occur in subsurface contexts.

RECOMMENDATIONS

No historic properties were identified during the Archaeological Field Inspection. The project area has been subjected to extensive prior ground disturbance. Based on the absence of historic properties, as well as the extensive ground disturbance in the project area, a formal Inventory Survey of the property is not recommended. An Archaeological Monitoring Plan (AMP) for this project has been submitted to the State Historic Preservation Division (SHPD) for formal review (Dagher and Dega 2016).

APPENDIX B

Pre-consultation Correspondence

Lynn Malinge

From: Paahana, Jessie K POH <Jessie.K.Paahana@usace.army.mil>
Sent: Friday, April 22, 2016 8:46 AM
To: Lynn Malinge
Subject: POH-2016-00037 Early Consultation Request for the South Maui Recycled Water System Expansion Project, 2nd 1.0 MG Tank and Pipeline Improvements

Good Morning, Ms. Malinge:

You requested comments on the subject project in preparation of a draft EA. No information was included regarding wetlands or other potential waters of the U.S. e.g. streams, canals, etc. Please be advised that Section 10 of the Rivers and Harbors Act of 1899 requires that a Department of the Army (DA) permit be obtained for certain structures or work in or affecting navigable waters of the United States, prior to conducting the work (33 U.S.C. 403). Section 404 of the Clean Water Act requires that a DA permit be obtained for the discharge of dredged and/or fill material into waters of the U.S., including wetlands and navigable waters of the U.S, prior to conducting the work (33 U.S.C. 1344).

If you would like substantive comments from this agency, please provide information regarding potential waters of the U.S. including wetlands. For your information, should the proposed pipeline improvements cross a water of the U.S. and result in the discharge of fill material into a water of the U.S., a permit will be required. Likewise, should the construction of the 2nd 1.0 MG tank result in the discharge of fill material into a water of the U.S., a permit will be required.

Your project has been assigned DA file number POH-2016-00037. Please reference this number in all future correspondence with this office concerning this project.

Mahalo,
Jessie

Building 230
Fort Shafter, Hawaii 96858-5440

SUBJECT: POH-2016-00037 Early Consultation Request
South Maui Recycled Water System Expansion Project
2nd 1.0 MG Tank and Pipeline Improvements
Job No. WW15-01

Dear Ms. Paahana:

Thank you for your correspondence dated April 22, 2016 providing early consultation comments on the subject project. We offer the following in response to the comments provided.

The scope of the proposed project includes work within the existing Kihei Wastewater Reclamation Facility (WWRF) and within the existing tank site parcel. Upgrade of approximately 400 feet of existing 14-inch recycled water line to 18-inch recycled water line is within the grounds of the existing Kihei WWRF. Construction of a second 1.0 MG recycled water storage tank and appurtenances is adjacent to the existing tank.

The Waimahaihai Stream, an intermittent stream, is expected to be the receiving water for storm water runoff from the Kihei WWRF and tank site. Best Management Practices for erosion control and storm water quality will be implemented during construction and observed in the final site design.

There are no wetlands or other potential waters of the U.S. within the existing Kihei WWRF or existing tank site, and project work does not involve work in, over, or under waters of the United States. There are no structures or work in or affecting navigable waters of the U.S. or activities that would involve discharge of dredged and/or fill material into wetlands and navigable waters of the U.S. As such, we respectfully request concurrence that a Department of the Army permit is not needed for this project.

We appreciate the input provided by your department and will transmit a copy of the Draft EA when published for review and comment. Should you have any questions, please feel free to contact me at (808) 944-1821.

Sincerely,
FUKUNAGA & ASSOCIATES, INC.

Honolulu, Hawai'i 96817

Dear Ms. Lynn Malinger:

Subject: Early Consultation Request; South Maui Recycled Water System Expansion Projects; 2nd 1.0 MG Tank and Pipeline Improvements, Job No. WW15-01.

Mahalo nui for your request for early consultation with the Department of Hawaiian Home Lands (DHHL) on the Wastewater Reclamation Division, County of Maui (WWRD) proposal to expand their South Maui Recycled Water System. DHHL reviewed your February 1, 2016 request for early consultation and provides the following information and comments.

Background

DHHL assesses its interests in water development by considering its legal rights, duties, and privileges related to water and its projected needs for water resources, including R-1 water. Our water needs are determined primarily based on information contained in documents in our planning system.

DHHL utilizes a three-tiered planning system to guide development and management of its land holdings for the benefit of current and future beneficiaries. The planning system includes an over-arching General Plan, followed by a second tier of Strategic Program Plans and Island Plans (which includes the Maui Island Plan (MIP) and the Water Policy Plan (WPP)¹), followed again by Regional and Development Plans in the third

¹ See Hawaiian Homes Commission Water Policy Plan, adopted July 22, 2014 available at: <http://dhhl.hawaii.gov/wp-content/uploads/2013/09/HHC-Water-Policy-Plan-140722.pdf>.

Ms. Lynn Malinger
February 18, 2016
Page 2

tier. These plans are available on the Planning Office pages of the DHHL website.

Specific to this region, DHHL holds over 23,000 acres in South Maui in its Kahikinui, Kalihi/Kanahena, and 'Āhihi tracts. MIP at 1-10. These properties are geographically remote with limited infrastructure and public services, and receive little annual rainfall, varying from 20 inches in makai areas of the region to 50 inches in the mauka regions. MIP at 7-1. No existing water service extends to these properties, with the exception of a substandard Maui County Department of Water Supply (DWS) water line extending to the Kalihi/Kanahena tract. MIP at 7-1.

Comment #1: More specific notice of the proposed action's relevance to DHHL interests would improve effectiveness of consultation with DHHL.

While early consultation is appreciated, the general lack of detail in your letter about the availability of any of this water to DHHL (or, alternately, the availability of potable water to DHHL through the use of this alternate source) limits our ability to comment on the proposal. Our ability to properly offer comments would be assisted by your specifically addressing possible intersections between the proposed action and DHHL's landholdings, plans, and prospective interests in the proposed project area. We note that the Hawai'i environmental review law, HRS Chapter 343, contains clear language requiring that EAs examine the impacts of proposed actions on Hawaiian rights, including those of DHHL.

Comment #2: Expansion of recycled water systems accords with portions of DHHL's Water Policy Plan (approved July 22, 2014).

DHHL considers water resource protection as one of its interests under its WPP. According to County documents, we understand that two of the future properties to be served by the proposed expansion include Maui Sunset and the Kauhale Makai, which currently utilize brackish water (30,000 GPD and 17,000 GPD, respectively) for needs that could be met through R-1 waters. Wastewater Reclamation Division, Dep't Env't'l Management & Dep't Water Supply, Maui County, *South Maui R-1 Recycled Water Verification Study*, at 9 (Dec. 2009). Reducing removal of brackish water from the nearshore areas, such as where Maui Sunset and Kauhale Makai are located, has been linked to the

Ms. Lynn Malinger
February 18, 2016
Page 3

improved integrity of groundwater aquifers and the health of coastal ecosystems. See Oki, D.S., Gingerich, S.B., and Whitehead, R.L., "Hawai'i", in *Ground Water Atlas of the United States, Segment 13, Alaska, Hawaii, Puerto Rico, and the U.S. Virgin Islands: U.S. Geological Survey Hydrologic Investigations Atlas 730-N*, p. N12-N22, N36 (1999). DHHL beneficiaries include native Hawaiian traditional and customary cultural practitioners, whose practices include nearshore gathering, fishing, and other practices. Inclusions of information about prospective, positive significant impacts on nearshore coastal areas and groundwater aquifers in the Environmental Assessment would further assist in assessing the impacts of WWRD's proposal on DHHL interests.

Comment #3: The proposed project should be assessed in relationship to the Maui County Water Use and Development Plan being updated now.

DHHL has been participating in early consultation meetings with the County Department of Water Supply as they prepare to update the Water Use and Development Plan for the island. In the first two meetings, a strong desire of stakeholders to see an increase in recycled water use in this region has emerged. The scale and service area for these improvements should be informed by and evaluated against the emerging goals in this parallel planning process.

Conclusion

Mahalo nui for WWRD's request for early consultation on the proposed South Maui Recycled Water System Expansion Projects. Please direct any questions to me at (808) 620-9501, or your staff may contact Kaleo Manuel in our Planning Office at (808) 620-9485 or at Kaleo.L.Manuel@hawaii.gov.

Aloha,

Jobie M. K. Masagatani, Chairman
Hawaiian Homes Commission

June 6, 2016

Ms. Jobie Masagatani, Chairperson
State of Hawaii
Department of Hawaiian Home Lands
P.O. Box 1879
Honolulu, Hawaii 96805

SUBJECT: Early Consultation Request
South Maui Recycled Water System Expansion Project
2nd 1.0 MG Tank and Pipeline Improvements
Job No. WW15-01

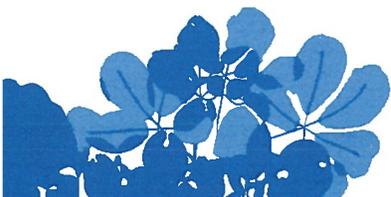

Dear Ms. Masagatani:

Thank you for your letter dated February 18, 2016 providing early consultation comments on the subject project. We offer the following information in response to the comments provided.

Comment #1: *More specific notice of the proposed action's relevance to DHHL interest would improve effectiveness of consultation with DHHL.*

As indicated in the preconsultation request, the purpose of the proposed project is to improve the operational reliability of the existing South Maui Recycled Water Distribution System and includes construction of a new 1.0 MG recycled water storage tank and appurtenances adjacent to the existing tank; new electric service and security lighting at the tank site; upgrade of approximately 400 feet of existing 14-inch recycled water line to 18-inch and replacement of the existing effluent pump station flow meter at the Kihei Wastewater Reclamation Facility (WWRF).

WWRD is committed to the reuse program, which is consistent with State and County plans and policies, including the Maui County Code of Ordinances Chapter 20.30 – Use of Reclaimed Water. WWRD has developed the recycled water distribution system in the core area around the Kihei WWRF and continues to explore reuse expansion opportunities. Please refer to the figure transmitted with the initial request for preconsultation which shows the recycled water system service area. Of the DHHL Tracts in the South Maui area identified in your letter, the nearest DHHL Tract appears to be the Kalihi/Kanahena Tract, which is about 3 miles south of the County's wastewater collection system service area and over 6 miles south of the current recycled water system service area. In developing plans for expansion, WWRD must consider the impact of infrastructure and maintenance costs with the quantity of resource available and magnitude of demands to be served. Based on the *2009 South Maui R-1 Recycled Water Verification Study*, it appears that DHHL lands are beyond the optimal service area. However, also consistent with State and county plans and policies, the EA will discuss the importance of recycled water as a valuable alternative water resource that can be used to meet non-potable water demands, potential demands that might otherwise use potable water.

Ms. Jobie Masagatani

June 6, 2016

Page 2

Comment #2: *Expansion of recycled water systems accords with portions of DHHL's Water Policy Plan (approved July 22, 2014.)*

Duly noted.

Comment #3: *The proposed project should be assessed in relationship to the Maui County Water Use and Development Plan being updated now.*

The proposed project supports the increased use of recycled water in this region. WWRD is in communication with the Department of Water and will continue to provide information in support of the WUDP update process.

We appreciate the input provided by your office and will transmit a copy of the Draft EA when published for review and comment. Should you have any questions, please feel free to contact me at (808) 944-1821.

Sincerely,
FUKUNAGA & ASSOCIATES, INC.

Dear Ms. Malinge:

SUBJECT: Comments on the Early Consultation Request for the South Maui Recycled Water System Expansion Project, Second 1-MG Tank and Pipeline Improvements, Job No. WW15-01 Kihei, Island of Maui, Hawaii

The Department of Health (DOH), Clean Water Branch (CWB), acknowledges receipt of your letter, dated February 1, 2016, requesting comments on your project. The DOH-CWB has reviewed the subject document and offers these comments. Please note that our review is based solely on the information provided in the subject document and its compliance with the Hawaii Administrative Rules (HAR), Chapters 11-54 and 11-55. You may be responsible for fulfilling additional requirements related to our program. We recommend that you also read our standard comments on our website at: <http://health.hawaii.gov/epo/files/2013/05/Clean-Water-Branch-Std-Comments.pdf>.

1. Any project and its potential impacts to State waters must meet the following criteria:
 - a. Antidegradation policy (HAR, Section 11-54-1.1), which requires that the existing uses and the level of water quality necessary to protect the existing uses of the receiving State water be maintained and protected.
 - b. Designated uses (HAR, Section 11-54-3), as determined by the classification of the receiving State waters.
 - c. Water quality criteria (HAR, Sections 11-54-4 through 11-54-8).
2. You may be required to obtain National Pollutant Discharge Elimination System (NPDES) permit coverage for discharges of wastewater, including storm water runoff, into State surface waters (HAR, Chapter 11-55).

For NPDES general permit coverage, a Notice of Intent (NOI) form must be submitted at least 30 calendar days before the commencement of the discharge. An application for an NPDES individual permit must be submitted at least 180 calendar days before the commencement of the discharge. To request NPDES permit coverage, you must submit the applicable form (“CWB Individual NPDES Form” or “CWB NOI Form”) through the e-Permitting Portal and the hard copy certification statement with the respective filing fee (\$1,000 for an individual NPDES permit or \$500 for a Notice of General Permit Coverage). Please open the e-Permitting Portal website located at: <https://eha-cloud.doh.hawaii.gov/epermit/>. You will be asked to do a one-time registration to obtain your login and password. After you register, click on the Application Finder tool and locate the appropriate form. Follow the instructions to complete and submit the form.

3. If your project involves work in, over, or under waters of the United States, it is highly recommended that you contact the Army Corp of Engineers, Regulatory Branch (Tel: 835-4303) regarding their permitting requirements.

Pursuant to Federal Water Pollution Control Act [commonly known as the “Clean Water Act” (CWA)], Paragraph 401(a)(1), a Section 401 Water Quality Certification (WQC) is required for “[a]ny applicant for Federal license or permit to conduct any activity including, but not limited to, the construction or operation of facilities, which may **result** in any discharge into the navigable waters...” (emphasis added). The term “discharge” is defined in CWA, Subsections 502(16), 502(12), and 502(6); Title 40 of the Code of Federal Regulations, Section 122.2; and HAR, Chapter 11-54.

4. Please note that all discharges related to the project construction or operation activities, whether or not NPDES permit coverage and/or Section 401 WQC are required, must comply with the State’s Water Quality Standards. Noncompliance with water quality requirements contained in HAR, Chapter 11-54, and/or permitting requirements, specified in HAR, Chapter 11-55, may be subject to penalties of \$25,000 per day per violation.
5. It is the State’s position that all projects must reduce, reuse, and recycle to protect, restore, and sustain water quality and beneficial uses of State waters. Project planning should:
 - a. Treat storm water as a resource to be protected by integrating it into project planning and permitting. Storm water has long been recognized as a source of irrigation that will not deplete potable water resources. What is often overlooked is that storm water recharges ground water supplies and feeds streams and estuaries; to ensure that these water cycles are not disrupted, storm water cannot be relegated as a waste product of impervious surfaces. Any project planning must recognize storm water as an asset that sustains and protects natural ecosystems and traditional beneficial uses of State waters, like

community beautification, beach going, swimming, and fishing. The approaches necessary to do so, including low impact development methods or ecological bio-engineering of drainage ways must be identified in the planning stages to allow designers opportunity to include those approaches up front, prior to seeking zoning, construction, or building permits.

- b. Clearly articulate the State's position on water quality and the beneficial uses of State waters. The plan should include statements regarding the implementation of methods to conserve natural resources (e.g., minimizing potable water for irrigation, gray water re-use options, energy conservation through smart design) and improve water quality.
- c. Consider storm water Best Management Practice (BMP) approaches that minimize the use of potable water for irrigation through storm water storage and reuse, percolate storm water to recharge groundwater to revitalize natural hydrology, and treat storm water which is to be discharged.
- d. Consider the use of green building practices, such as pervious pavement and landscaping with native vegetation, to improve water quality by reducing excessive runoff and the need for excessive fertilization, respectively.
- e. Identify opportunities for retrofitting or bio-engineering existing storm water infrastructure to restore ecological function while maintaining, or even enhancing, hydraulic capacity. Particular consideration should be given to areas prone to flooding, or where the infrastructure is aged and will need to be rehabilitated.

If you have any questions, please visit our website at:

<http://health.hawaii.gov/cwb>, or contact the Engineering Section, CWB, at (808) 586-4309.

Sincerely,

ALEC WONG, P.E., CHIEF
Clean Water Branch

NN:ak

c: DOH-EPO [via e-mail Noella.Narimatsu@doh.hawaii.gov only]

June 6, 2016

Mr. Alec Wong, Chief
State of Hawaii
Department of Health
Clean Water Branch
919 Ala Moana Boulevard, Room 301
Honolulu, Hawaii 96814

SUBJECT: Early Consultation Request
South Maui Recycled Water System Expansion Project
2nd 1.0 MG Tank and Pipeline Improvements
Job No. WW15-01

Dear Mr. Wong:

Thank you for your letter dated February 25, 2016 providing early consultation comments on the subject project. We offer the following in response to the comments.

1. The Department of Health (DOH) Water Quality Standards Classifications Map indicates that the project is within an inland area with an Inland Classification of "Class 2 streams & waterbodies." The Waimahaihai Stream is the closest receiving water for stormwater runoff from the project sites. In order to meet the requirements of the antidegradation policy HAR, Section 11-54-1.1, protect the designated uses of Class 2 waters as defined in HAR, Section 11-54-3, and meet the water quality criteria as defined in HAR, Section 11-54-4 through 11-54-8, Best Management Practices (BMP) for erosion control and storm water quality will be implemented during construction and observed in the final site design.
2. In compliance with HAR, Chapter 11-55, a National Pollution Discharge Elimination System (NPDES) General Permit will be obtained for the project in the event it is determined that construction activities will disturb more than one acre.
3. The proposed project does not involve work in, over, or under waters of the United States. Army permitting requirements do not apply to this project, and a request for concurrence with this determination has been made.
4. It is noted that all discharges related to the project construction or operation activities must comply with the State Water Quality Standards.
5. The State's position that all projects must reduce, reuse, and recycle to protect, restore, and sustain water quality and beneficial uses of State waters is acknowledged. Project planning will consider the issues mentioned, as applicable. For example, low impact

Mr. Alec Wong
June 6, 2016

Dear Ms. Malinger:

**SUBJECT: Early Consultation (EC) for South Maui Recycled Water System Expansion Project
2nd 1.0 MG Tank and Pipeline Improvements
TMK: 2-2-002:075, 2-2-24:010**

The Department of Health (DOH), Environmental Planning Office (EPO), acknowledges receipt of your EC to our office on February 4, 2016. Thank you for allowing us to review and comment on the proposed project. The EC was routed to the District Health Office on Maui, the Clean Water, Wastewater, and Safe Drinking Water Branches. They will provide specific comments to you if necessary. EPO recommends that you review the standard comments and available strategies to support sustainable and healthy design provided at: <http://health.hawaii.gov/epo/landuse>. Projects are required to adhere to all applicable standard comments.

EPO suggests you review guidance maps and viewers available on the Environmental Planning GIS website: <http://health.hawaii.gov/epo/egis>.

EPO also encourages you to examine and utilize the Hawaii Environmental Health Portal. The portal provides links to our e-Permitting Portal, Environmental Health Warehouse, Groundwater Contamination Viewer, Hawaii Emergency Response Exchange, Hawaii State and Local Emission Inventory System, Water Pollution Control Viewer, Water Quality Data, Warnings, Advisories and Postings. The Portal is continually updated. Please visit it regularly at: <https://eha-cloud.doh.hawaii.gov>

We request that you utilize all of this information on your proposed project to increase sustainable, innovative, inspirational, transparent and healthy design.

EJ Index for the Selected Area Compared to All People's Block Groups in the State/Region/US

This report shows environmental, demographic, and EJ indicator values. It shows environmental and demographic raw data (e.g., the estimated concentration of ozone in the air), and also shows what percentile each raw data value represents. These percentiles provide perspective on how the selected block group or buffer area compares to the entire state, EPA region, or nation. For example, if a given location is at the 95th percentile nationwide, this means that only 5 percent of the US population has a higher block group value than the average person in the location being analyzed. The years for which the data are available, and the methods used, vary across these indicators. Important caveats and uncertainties apply to this screening-level information, so it is essential to understand the limitations on appropriate interpretations and applications of these indicators. Please see EJSCREEN documentation for discussion of these issues before using reports.

FLOOD HAZARD ASSESSMENT TOOL LAYER LEGEND (Note: legend does not correspond with NFHL)

SPECIAL FLOOD HAZARD AREAS (SFHAs) SUBJECT TO INUNDATION BY THE 1% ANNUAL CHANCE FLOOD - The 1% annual chance flood (100-year), also known as the base flood, is the flood that has a 1% chance of being equaled or exceeded in any given year. SFHAs include Zone A, AE, AH, AO, V, and VE. The Base Flood Elevation (BFE) is the water surface elevation of the 1% annual chance flood. Mandatory flood insurance purchase applies in these zones:

	Zone A: No BFE determined.
	Zone AE: BFE determined.
	Zone AH: Flood depths of 1 to 3 feet (usually areas of ponding); BFE determined.
	Zone AO: Flood depths of 1 to 3 feet (usually sheet flow on sloping terrain); average depths determined.
	Zone V: Coastal flood zone with velocity hazard (wave action); no BFE determined.
	Zone VE: Coastal flood zone with velocity hazard (wave action); BFE determined.
	Zone AEF: Floodway areas in Zone AE. The floodway is the channel of stream plus any adjacent floodplain areas that must be kept free of encroachment so that the 1% annual chance flood can be carried without increasing the BFE.

NON-SPECIAL FLOOD HAZARD AREA - An area in a low-to-moderate risk flood zone. No mandatory flood insurance purchase requirements apply, but coverage is available in participating communities.

	Zone XS (X shaded): Areas of 0.2% annual chance flood; areas of 1% annual chance flood with average depths of less than 1 foot or with drainage areas less than 1 square mile; and areas protected by levees from 1% annual chance flood.
	Zone X: Areas determined to be outside the 0.2% annual chance floodplain.

OTHER FLOOD AREAS

	Zone D: Unstudied areas where flood hazards are undetermined, but flooding is possible. No mandatory flood insurance purchase apply, but coverage is available in participating communities.

FLOOD HAZARD ASSESSMENT TOOL LAYER LEGEND (Note: legend does not correspond with NFHL)

SPECIAL FLOOD HAZARD AREAS (SFHAs) SUBJECT TO INUNDATION BY THE 1% ANNUAL CHANCE FLOOD - The 1% annual chance flood (100-year), also known as the base flood, is the flood that has a 1% chance of being equaled or exceeded in any given year. SFHAs include Zone A, AE, AH, AO, V, and VE. The Base Flood Elevation (BFE) is the water surface elevation of the 1% annual chance flood. Mandatory flood insurance purchase applies in these zones:

	Zone A: No BFE determined.
	Zone AE: BFE determined.
	Zone AH: Flood depths of 1 to 3 feet (usually areas of ponding); BFE determined.
	Zone AO: Flood depths of 1 to 3 feet (usually sheet flow on sloping terrain); average depths determined.
	Zone V: Coastal flood zone with velocity hazard (wave action); no BFE determined.
	Zone VE: Coastal flood zone with velocity hazard (wave action); BFE determined.
	Zone AEF: Floodway areas in Zone AE. The floodway is the channel of stream plus any adjacent floodplain areas that must be kept free of encroachment so that the 1% annual chance flood can be carried without increasing the BFE.

NON-SPECIAL FLOOD HAZARD AREA - An area in a low-to-moderate risk flood zone. No mandatory flood insurance purchase requirements apply, but coverage is available in participating communities.

	Zone XS (X shaded): Areas of 0.2% annual chance flood; areas of 1% annual chance flood with average depths of less than 1 foot or with drainage areas less than 1 square mile; and areas protected by levees from 1% annual chance flood.
	Zone X: Areas determined to be outside the 0.2% annual chance floodplain.

OTHER FLOOD AREAS

	Zone D: Unstudied areas where flood hazards are undetermined, but flooding is possible. No mandatory flood insurance purchase applies, but coverage is available in participating communities.

Land Division Oahu, DLNR-LD

FROM: Jeffrey T. Pearson, P.E., Deputy Director 
Commission on Water Resource Management

SUBJECT: Early Consultation Request for South Maui Recycled Water System Expansion Project; 2nd 1.0 MG Tank and Pipeline Improvements

FILE NO.: RFD.4325.6
TMK NO.: (2) 2-2-002:075 & 2-2-024:010

Thank you for the opportunity to review the subject document. The Commission on Water Resource Management (CWRM) is the agency responsible for administering the State Water Code (Code). Under the Code, all waters of the State are held in trust for the benefit of the citizens of the State, therefore all water use is subject to legally protected water rights. CWRM strongly promotes the efficient use of Hawaii's water resources through conservation measures and appropriate resource management. For more information, please refer to the State Water Code, Chapter 174C, Hawaii Revised Statutes, and Hawaii Administrative Rules, Chapters 13-167 to 13-171. These documents are available via the Internet at <http://dlnr.hawaii.gov/cwrm>.

Our comments related to water resources are checked off below.

1. We recommend coordination with the county to incorporate this project into the county's Water Use and Development Plan. Please contact the respective Planning Department and/or Department of Water Supply for further information.
2. We recommend coordination with the Engineering Division of the State Department of Land and Natural Resources to incorporate this project into the State Water Projects Plan.
3. We recommend coordination with the Hawaii Department of Agriculture (HDOA) to incorporate the reclassification of agricultural zoned land and the redistribution of agricultural resources into the State's Agricultural Water Use and Development Plan (AWUDP). Please contact the HDOA for more information.
4. We recommend that water efficient fixtures be installed and water efficient practices implemented throughout the development to reduce the increased demand on the area's freshwater resources. Reducing the water usage of a home or building may earn credit towards Leadership in Energy and Environmental Design (LEED) certification. More information on LEED certification is available at <http://www.usgbc.org/leed>. A listing of fixtures certified by the EAP as having high water efficiency can be found at <http://www.epa.gov/watersense>.
5. We recommend the use of best management practices (BMP) for stormwater management to minimize the impact of the project to the existing area's hydrology while maintaining on-site infiltration and preventing polluted runoff from storm events. Stormwater management BMPs may earn credit toward LEED certification. More information on stormwater BMPs can be found at <http://hawaii.gov/dbedt/czm/initiative/lid.php>.
6. We recommend the use of alternative water sources, wherever practicable.
7. We recommend participating in the Hawaii Green Business Program, that assists and recognizes businesses that strive to operate in an environmentally and socially responsible manner. The program description can be found online at <http://energy.hawaii.gov/green-business-program>.
8. We recommend adopting landscape irrigation conservation best management practices endorsed by the Landscape Industry Council of Hawaii. These practices can be found online at

http://www.hawaiiscape.com/wp-content/uploads/2013/04/LICH_Irrigation_Conservation_BMPs.pdf.

- 9. There may be the potential for ground or surface water degradation/contamination and recommend that approvals for this project be conditioned upon a review by the State Department of Health and the developer's acceptance of any resulting requirements related to water quality.
 - 10. The proposed water supply source for the project is located in a designated water management area, and a Water Use Permit is required prior to use of water. The Water Use Permit may be conditioned on the requirement to use dual line water supply systems for new industrial and commercial developments.
 - 11. A Well Construction Permit(s) is (are) are required before the commencement of any well construction work.
 - 12. A Pump Installation Permit(s) is (are) required before ground water is developed as a source of supply for the project.
 - 13. There is (are) well(s) located on or adjacent to this project. If wells are not planned to be used and will be affected by any new construction, they must be properly abandoned and sealed. A permit for well abandonment must be obtained.
 - 14. Ground-water withdrawals from this project may affect streamflows, which may require an instream flow standard amendment.
 - 15. A Stream Channel Alteration Permit(s) is (are) required before any alteration can be made to the bed and/or banks of a steam channel.
 - 16. A Stream Diversion Works Permit(s) is (are) required before any stream diversion works is constructed or altered.
 - 17. A Petition to Amend the Interim Instream Flow Standard is required for any new or expanded diversion(s) of surface water.
 - 18. The planned source of water for this project has not been identified in this report. Therefore, we cannot determine what permits or petitions are required from our office, or whether there are potential impacts to water resources.
- OTHER:

If you have any questions, please contact Lenore Ohye of the Commission staff at 587-0216.

Dear Ms. Malinger,

SUBJECT: Early Consultation Request for South Maui Recycled Water System Expansion, Maui,
Hawai'i

The Office of Environmental Quality Control (OEQC) has reviewed your February 1, 2016 letter about the proposed action and offers the following comments for your consideration.

OEQC commends the expansion of a water conservation project. Based on the information provided, OEQC recommends the incorporation of low impact development strategies. The project would increase the area of impervious surfaces, and mitigation measures such as pavers or pervious pavements would help groundwater recharge in the area and decrease storm water runoff. OEQC endorses factoring climate change into this and all future projects. Changing weather patterns in the Pacific are projected to result in increased tropical storm activity and localized rainfall severity, likely producing periodic extreme downpours that may exceed the project's design standards. OEQC recommends that the project's infrastructure and storm water run-off mitigation measures consider these projected weather events.

Thank you for your role in Hawai'i's environmental review process and for the opportunity to comment at this early stage of this project. If you have any questions please consult our website at <http://health.hawaii.gov/oeqc> or contact our office at (808) 586-4185.

Sincerely,

Scott Glenn, Interim Director

Kēōkea Ahupua'a, Kula Moku, Maui Moku
Tax Map Key (2) 2-2-002:075 and 2-2-024:010

Aloha e Ms. Malinger:

The Office of Hawaiian Affairs (OHA) is in receipt of your letter dated February 1, 2016 and an enclosed map. The County of Maui, Waste Water Reclamation Division is proposing the South Maui Recycled Water System Expansion Project ("project") and is soliciting comments in preparation of a draft environmental assessment (EA). The proposed project includes constructing a second 1.0 million gallon (MG) storage tank and appurtenances adjacent to an existing 1.0 MG tank, providing new electrical service from an existing overhead line, upgrading approximately 400 feet of an existing 14-inch water line to an 18-inch water line, replacing the pump station flow meter, and providing a new meter vault. The purpose of the project is to increase the availability of recycled, potable water for current and future users and decrease the use of injection wells for effluent disposal.

At this time, OHA does not have substantive comments regarding the project and believes that the project, if implemented as described in your letter, has the potential to have a beneficial impact on our beneficiaries in the area serviced by recycled water system. We look forward to reviewing the draft EA.

Lynn Malinger, P.E.
February 19, 2016

DIRECTOR
OFFICE OF PLANNING

Ref. No. P-15046

February 17, 2016

Ms. Lynn Malinger, P.E.
Project Manager
Fukunaga & Associates, Inc.
1357 Kapiolani Boulevard, Suite 1530
Honolulu, Hawaii 96814

Dear Ms. Malinger:

Subject: Early Consultation Request for the South Maui Recycled Water System Expansion Project, 2nd 1.0 MG Tank and Pipeline Improvements, Job. No. WW15-01; TMK's: (2) 2-2-002:075 and 2-2-024:010

Thank you for the opportunity to provide comments on this early consultation request for the South Maui recycled water system expansion project, located in Kihei, Maui. The pre-consultation review material was transmitted to our office by letter dated February 1, 2016.

It is our understanding that the County of Maui, Wastewater Reclamation Division proposes a more robust system, from what is currently in place that will accommodate the increase in recycled water demands during the summer months, provide redundancy and greater reliability, and allow for an increase in the number of recycled water customers on the island of Maui. The project seeks to increase the available potable water for current and future users and decrease the use of injection wells for effluent disposal.

The project calls for the construction of a second 1.0 million gallon recycled water storage and tank appurtenances. The tank dimensions would be similar to the existing tank, which is approximately 20 feet high and 100 feet in diameter. It will also upgrade approximately 400 feet of existing 14-inch recycled water line to an 18-inch recycled water line, replace the effluent pump station flow meter, and provide a new meter vault at the Kihei Wastewater Reclamation Facility.

The Office of Planning (OP) has reviewed the transmitted material and has the following comments to offer:

1. Pursuant to the Hawaii Administrative Rules (HAR) § 11-200-10(4) – general description of the action's technical, economic, social, and environmental characteristics; this project must demonstrate that it is consistent with a number of State environmental, social, and economic goals and policies for land use and housing

development. OP provides technical assistance to State and county agencies in administering the statewide planning system in Hawaii Revised Statutes (HRS) Chapter 226, the Hawaii State Plan. The Hawaii State Plan provides goals, objectives, policies, and priority guidelines for growth, development, and the allocation of resources throughout the State in areas of state interest, including but not limited to the economy, agriculture, the visitor industry, federal expenditure, the physical environment, facility systems, socio-cultural advancement, climate change adaptation, and sustainability.

The Draft Environmental Assessment (Draft EA) should include an analysis that addresses whether the proposed project conforms to or is in conflict with the goals, objectives, policies, and priority guidelines listed in the Hawaii State Plan.

2. The coastal zone management (CZM) area is defined as “all lands of the State and the area extending seaward from the shoreline to the limit of the State’s police power and management authority, including the U.S. territorial sea” see HRS § 205A-1 (definition of "coastal zone management area").

HRS Chapter 205A requires all State and county agencies to enforce the CZM objectives and policies. The Draft EA should include an assessment as to how the proposed project conforms to the CZM objectives and its supporting policies set forth in HRS § 205A-2. The assessment on compliance with HRS § 205A-2 is an important component for satisfying the requirements of HRS Chapter 343. These objectives and policies include recreational resources, historic resources, scenic and open space resources, coastal ecosystems, economic uses, coastal hazards, managing development, public participation, beach protection, and marine resources.

3. It appears that some of the reuse lines emanating from the wastewater reclamation facility and the proposed storage tank location cross into the Special Management Area (SMA) delineated by the County of Maui, Department of Planning and may be subject to SMA permitting. Please consult with said agency to make a determination whether this project will require a SMA permit.
4. Pursuant to HAR § 11-200-10(6) – identification and summary of impacts and alternatives considered; in order to ensure that the coastline and water resources near South Maui remain protected, the negative effects of stormwater inundation ensuing from development activities should be evaluated in the Draft EA. The project area appears to be located in an open, but developed area. The community of Kihei, which is adjacent to this project, is heavily urbanized and has an extensive network of drainage infrastructure. The area surrounding the Kihei Wastewater Reclamation Facility, and the proposed storage tank, is dry shrub land and trees. During heavy storm events, the area up slope of Kihei can transport sediment, land-based pollutants, and toxicant-load contributions to the nearshore waters of the South Maui.

The Draft EA should examine potential benefits and/or negative impacts resulting from this project on coastal and marine resources. Issues that may be examined in the Draft EA include, but are not limited to, project site characteristics in relation to erosion controls on flood prone areas, undeveloped open spaces, and the absorption characteristics of the soil. Furthermore, it should differentiate between the existing permeable surfaces versus hardened surfaces in the area. These items, as well as the marine water quality classification, should be considered when developing mitigation measures to protect the coastal ecosystem.

The enclosed map of this project, as well as resources available to us, indicate that the Kihei Wastewater Reclamation Facility is located nearly one mile from the coastline. The project site is located within the State Land Use Agriculture District.

The Draft EA should examine the cumulative impact on coastal resources from land-based polluted runoff and sediment loss. It should take into account any of the natural features in the area, undeveloped open spaces, down-sloping topography, hardened non-permeable surfaces that have a cumulative effect on the volume and speed of storm runoff, and soil absorption rates.

OP has a number of resources available to assist in the development of projects which ensure sediment and stormwater control on land, thus protecting the nearshore environment. OP recommends consulting these guidance documents and stormwater evaluative tools when developing strategies to address polluted runoff. They offer useful techniques to keep land-based pollutants and sediment in place and prevent contaminating nearshore waters, while considering the practices best suited for this project. These three evaluative tools that should be used during the design process include:

- Hawaii Watershed Guidance provides direction on mitigation strategies in urban areas that will safeguard Hawaii's watersheds and implement watershed plans [http://files.hawaii.gov/dbedt/op/czm/initiative/nonpoint/HI Watershed Guidance Final.pdf](http://files.hawaii.gov/dbedt/op/czm/initiative/nonpoint/HI_Watershed_Guidance_Final.pdf)
- Stormwater Impact Assessments can be used to identify and evaluate information on hydrology, stressors, sensitivity of aquatic and riparian resources, and management measures to control runoff, as well as consider secondary and cumulative impacts to the area http://files.hawaii.gov/dbedt/op/czm/initiative/stomwater_impact/final_storm_water_impact_assessments_guidance.pdf
- Low Impact Development (LID), A Practitioners Guide covers a range of structural best management practices (BMP's) for stormwater control

Ms. Lynn Malinger, P.E.

If you have any questions regarding this comment letter, please contact Josh Hekekoa of our office at (808) 587-2845.

Sincerely,

A handwritten signature in black ink, appearing to read 'L. Asuncion', with a stylized flourish at the end.

Leo R. Asuncion
Director

June 6, 2016

Mr. Leo Asuncion, Director
State of Hawaii
Office of Planning
P.O. Box 2359
Honolulu, Hawaii 96804-2359

Attention: Mr. Josh Hekeka

SUBJECT: Early Consultation Request
South Maui Recycled Water System Expansion Project
2nd 1.0 MG Tank and Pipeline Improvements
Job No. WW15-01

Dear Mr. Asuncion:

Thank you for your correspondence dated February 17, 2016 providing early consultation comments on the subject project. We offer the following in response to the comments provided.

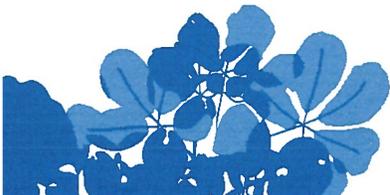

Comment 1: *The Draft Environmental Assessment (Draft EA) should include an analysis that addresses whether the proposed project conforms to or is in conflict with the goals, objectives, policies, and priority guidelines listed in the Hawaii State Plan.*

The Draft EA will assess the Hawaii State Plan objectives and policies relevant to the proposed project. The proposed project is consistent with the goals, objectives, policies and priority guidelines listed in the Hawaii State Plan. The proposed project will improve the existing South Maui Recycled Water Distribution System, which will support existing use and future additional use of non-potable water to meet non-potable water demands, such as irrigation, which might otherwise use potable water. Further, additional reuse will decrease effluent disposal through injection wells. Therefore, the proposed project will promote the proper management of Hawaii's water resources by reclaiming a valuable water resource and allowing its use as an alternative to potable water so that water is put to its best and highest use; i.e. potable water left available for drinking water purposes.

Comment 2: *HRS Chapter 205A requires all State and county agencies to enforce the Coastal Management Zone (CZM) objectives and policies. The Draft EA should include an assessment as to how the proposed project conforms to the CZM objectives and its supporting policies set forth in HRS §205A-2.*

An assessment of the CZM objectives and policies will be included in the Draft EA.

Comment 3: *It appears that some of the reuse lines emanating from the wastewater reclamation facility and the proposed storage tank location cross into the Special Management Area (SMA) delineated by the County of Maui, Department of Planning and may be subject to SMA permitting. Please consult with said agency to make a determination whether this project will require an SMA permit.*

The reuse lines emanating from the wastewater reclamation facility are existing lines. The proposed project areas, Kihei WWRF and tank site, are located outside of the SMA delineated by the County of Maui, Department of Planning and have been confirmed as such by the Environmental Planning Section.

Comment 4: *Pursuant to HLR §11-200-10(6) – identification and summary of impacts and alternatives considered; in order to ensure that the coastline and water resources near South Maui remain protected, the negative effects of stormwater inundation ensuing from development activities should be evaluated in the Draft EA.*

The Draft EA should examine potential benefits and/or negative impacts resulting from this project on coastal and marine resources.

The Draft EA should examine the cumulative impact on coastal resources from land-based polluted runoff and sediment loss. It should take into account any of the natural features in the area, undeveloped open spaces, down-sloping topography, hardened non-permeable surfaces that have a cumulative effect on the volume and speed of storm runoff, and soil absorption rates.

Proposed construction at the Kihei WWRF is entirely within the developed portion of the existing facility, and disturbed surfaces from construction will be restored to their original conditions. Project improvements will not increase the quantity of storm water runoff, and post construction storm water runoff will continue to discharge into the existing onsite drainage structures and drainage features. Existing drainage features include drain inlets and grass landscaped areas.

Proposed construction at the tank site will include a paved perimeter road around the 1.0 MG recycled water tank sloped to direct storm water runoff westward to water quality facilities. In compliance with the State's position that all projects must reduce, reuse, and recycle to protect, restore, and sustain water quality and beneficial uses of State waters, low impact development (LID) techniques such as detention facilities, limiting impervious surfaces, and reducing driveway and roadway widths will be considered.

We appreciate the input provided by your office and will transmit a copy of the Draft EA when published for review and comment. Should you have any questions, please feel free to contact me at (808) 944-1821.

Sincerely,
FUKUNAGA & ASSOCIATES, INC.

Re: South Maui Recycled Water System Expansion Project Job NO WW15-01

Dear Lynn:

Thank you for the opportunity to comment on this subject. At this time, our office provides the following comments:

- Our office does not have any comments regarding the referenced subject.
- Our office does reserve the right to comment on the proposed project during the building permit review process if any permits for this project are routed to our office for review. At that time, fire department access, water supply for fire protection, and fire and life safety requirements will be addressed.

If there are any questions or comments, please feel free to contact me at (808) 876-4693.

Sincerely,

Dear Ms. Malinge:

SUBJECT: Early Consultation Request for Proposed South Maui Recycled Water System Expansion Project, 2nd 1.0 MG Tank and Pipeline Improvements, Job No. WW15-01

Thank you for the opportunity to review and comment on the proposed South Maui Recycled Water System Improvements. The Department is in support of this project and would like to review the project as it develops. In accordance with the requirements of Chapter 343, Hawaii Revised Statutes (HRS) and Section 11-2-00-6, Hawaii Administrative Rules (HAR) please provide a copy of the Draft Environmental Assessment (EA).

Feel free to contact me or Robert Halvorson, Chief of Planning and Development, at 270-7931, should you have any questions.

Sincerely,

A handwritten signature in black ink, appearing to read "Ka'ala Buenconsejo", is written over a faint, larger version of the signature.

Dear Ms. Malinger:

RE: Early Consultation for a Draft Environmental Assessment (DEA)
South Maui Recycled Water System Expansion Project (additional 1.0 MG Tank and
Pipeline Improvements) Kihei WWRF on TMK: (2) 2-2-024:010

Thank you for the opportunity to offer the following comments on the above referenced project. We understand that this project will double the recycled water storage capability and upgrading 14-inch with 18-inch recycled waterlines would accommodate the increase in demand during the summer months as well as provide greater reliability. The Department of Water Supply is pleased that the Wastewater Reclamation Division is pursuing this project and has no objection.

Pollution Prevention

In order to protect ground and surface waters, Best Management Practices (BMPs) designed to minimize infiltration and runoff should be noted in the DEA and implemented during construction, including:

- Properly install and maintain erosion control barriers such as silt fencing or straw bales.
- Disturb the smallest area possible.
- Apply biocides only during dry periods of low rainfall to minimize chemical run-off.
- Keep run-off on site.
- No construction or toxic materials or debris should be placed where it may enter the ocean. Debris should be disposed of outside the coastal zone.

Should you have any questions, please contact staff planner Marti Buckner at (808) 463-3104 or marti.buckner@co.maui.hi.us.

Sincerely,

A handwritten signature in cursive script that reads "Paul J. Meyer".

Subject: Early Consultation for South Maui Recycled Water System Expansion Project (RFC 2016/0027)
Attachments: ZonFldConf_Rev12-13_WEB_201401081911318912.pdf

Aloha Ms. Malinge:

Thank you for the opportunity to provide comments during the early consultation phase of environmental review of the subject project. On behalf of the Department of Planning, we understand that the project consists of:

1. Firstly, construction of a second 1.0 million gallon recycled water storage tank and appurtenant structures adjacent to the existing tank, located at Maui TMK: 2-2-002:075. The tank dimensions are to be similar to the existing tank which is approximately 20 feet high and 100 feet in diameter. The existing 1.332 acre site is located approximately 0.5 miles mauka of the Kihei Wastewater Reclamation Facility (WWRF), and is owned by the County of Maui.
2. The second component of the project is to upgrade approximately 400 feet of the existing recycled water line from 14-inch to 18-inch, replace the effluent pump station flow meter, and provide a new meter vault at the Kihei WWRF, located at Maui TMK: 2-2-024:010.

Comments:

1. Neither TMK (2-2-002:075, 2-2-024:010) are located in the Special Management Area.
2. The land use designations on TMK: 2-2-024:010 were confirmed on January 14, 2016 as follows:
State Land Use: Agricultural District
County Zoning: Agricultural District
Kihei-Makena Community Plan: Public/Quasi-Public
3. The land use designations on TMK: 2-2-002:075 have not been confirmed. If you haven't already done so, we suggest you request zoning confirmation from the Zoning Administration and Enforcement Division. For your convenience, a blank form is attached.

Thank you for the opportunity to provide comments. Please include the Department of Planning in your distribution of the environmental assessment for further comments.

Sincerely,

2nd 1.0 MG Tank and Pipeline Improvements
Job No. WW15-01

Dear Ms. Callentine:

Thank you for your correspondence dated March 7, 2016 providing early consultation comments on the subject project.

Land use designation will be addressed in the Draft Environmental Assessment (EA). Regarding TMK: 2-2-002:075, the proposed site for the second 1.0 million gallon recycled water storage tank and appurtenances, the land use designations were confirmed on March 30, 2016 as follows:

State Land Use: Agriculture
County Zoning: Agriculture
Kihei-Makena Community Plan: Agriculture

We appreciate the input provided by your department and will transmit a copy of the Draft EA when published for review and comment. Should you have any questions or further comments, please feel free to contact me at (808) 944-1821.

Subject: Early Consultation Request
South Maui Recycled Water System Expansion Project
2nd 1.0 MG Tank and Pipeline Improvements
Job No. WW15-01

Dear Ms. Malinger

Thank you for your letter dated February 1, 2016, requesting comments as part of the early consultation and data gathering process for the proposed South Maui Recycled Water System Expansion Project. It is our understanding that the project is intended to improve system redundancy and reliability allowing for an increase in the number of recycled water customers.

We are generally supportive of efforts to increase the use of recycled water in South Maui and the specific improvements outlined in your letter would appear to have no major direct impacts on Ranch lands or operations. We look forward to reviewing the more detailed description and analysis during the Draft Environmental Assessment review process. For now, we would like to provide information regarding potential future uses of recycled water in the area, both near and long term.

Haleakala Ranch Company (HRC) is the owner of TMK parcel (2) 2-2-002: 84, a 2,175 acre parcel adjacent to the Kihei Waste Water Reclamation Facility (WWRF). As shown on the service area map provided in with your letter, Kihei Compost LLC (formerly Maui Earth Compost) is a tenant on this parcel and is a current customer of the South Maui Recycled Water System. HRC is currently in the process of negotiating terms for a new tenant to utilize approximately 10 acres immediately mauka of the Kihei Compost site. It is anticipated that the new tenant will be requesting a new service connection in order to utilize recycled water. Preliminary estimates of usage would be up to 12,000 gpd on peak days, with approximately 5 peak days per month. Monthly usage totals would be up to 100,000 gallons. It is anticipated that the project would start full operations in approximately 1 year. A more detailed analysis of usage will be prepared as project plans are being refined over the next couple of months.

HRC also has interests in lands which are designated as part of the Maui Research and Technology Park (MRTP) Master Plan, including TMK (2) 2-2-002: 85. The MRTP Master Plan anticipates significant usage of recycled water over the long term build out of the project. A

detailed description of the project and anticipated recycled water needs can be found in the Final EIS for the project which can be downloaded from the OEQC web site.

Thank you again for the opportunity to provide comments on this project. Please do not hesitate to contact me, or our Land Planning Consultant, Mr. Rory Frampton, at (808) 298-4956 or rory@roryframpton.com, if you have any further questions.

Sincerely,

A handwritten signature in black ink, appearing to read "Don Young", written in a cursive style.

RE: Early Consultation Request
South Maui Recycled Water System Expansion Project
2nd 1.0 MG Tank and Pipeline Improvements
Job No. WW 15-01

Dear Lynn Mallinger:

We are in receipt of your February 1, letter requesting comments on the proposed South Maui Recycled Water System Project. You have asked for comments or concerns by KCA on or before February 26, 2016.

The proposed project described in your letter appears to expand your present Recycled Water System by the addition of the three major components. The first project is the addition of a second 1.0 MG recycled water storage tank similar to the existing storage tank. The second is providing new electrical service and providing safety lighting at the tank site. The third part of the project is upgrading 400 feet of 14-inch pipe to 18-inches and providing a replacement of the effluent pump station flow meter.

The purpose of the project is to being better able to accommodate recycled water demands in the summer months, provide redundancy and increase reliability, and to increase the number of recycled water customers. By additional use of the effluent there would be a decrease in the use of the injection wells.

While KCA has taken a supportive position on the use of recycled water in general, there are several concerns and issues that we feel should be addressed in your Draft Environmental Assessment (EA) on the R-1 program in general since this project supports the program. The comments are as follows:

It is our understanding that the treatment for R-1 water does not remove the heavy metals or the unused pharmaceuticals from the effluent. Since this R-1 product is planned to be used extensively going forward, please address the long term affect that this product has on the ground water.

Much of the R-1 irrigated property in South Maui is adjacent to the coastal waters. Since the Federal Clean Water Act does not allow this water to be discharge into the ocean, how can the County assure that no toxic material flows from this program into the coastal waters from the sandy soils?

The proposed users of the R-1 treated effluent for irrigation are in many cases residential areas where the effluent will be used immediately next to habitable areas. With the strong wind gusts in South Maui, there will be no way to eliminate ingestion of the effluent product by humans and pets. Would it be prudent to use the future expansion of R-1 water use further from the coastal waters and from the inhabitable areas and use it for agricultural or other use?

KCA is very interested in having a sound recycling program. While the three proposed main additions to this program do not in themselves have a major impact on the environment, they do support a program that should be evaluated to best serve the community.

Sincerely,

Mike Moran, President
Kihei Community Association

cc: Joanie Gushiken, County of Maui, DEM-WWRD

June 7, 2016

Mr. Michael Moran, President
Kihei Community Association
P.O. Box 662
Kihei, Hawaii 96753

SUBJECT: Early Consultation Request
South Maui Recycled Water System Expansion Project
2nd 1.0 MG Tank and Pipeline Improvements
Job No. WW15-01

Dear Mr. Moran:

Thank you for your letter dated February 7, 2016 providing early consultation comments on the subject project. We offer the following in response to your comments.

Protection of public health and the environment is the focus of the County of Maui Wastewater Reclamation Division's (WWRD) mission. Maui County is committed to the reuse program, which is consistent with State and County land use plans and policies. The South Maui Recycled Water Distribution System has been delivering this valuable water resource to meet non-potable water needs in the area for nearly 20 years.

R-1 recycled water is the highest grade of recycled water which is treated and distributed in accordance with the State of Hawaii Department of Health (DOH) regulations. Recycled water can only be applied in approved areas as defined by the DOH; and end users must be trained and submit an application for approval by the County and DOH. The application defines best management practices (BMPs) to be implemented as well as other pertinent information. Detailed requirements can be found in the 2016 DOH Reuse Guidelines, which is available at the following website <http://health.hawaii.gov/wastewater/home/reuse/>.

Comment #1: It is our understanding that the treatment for R-1 water does not remove the heavy metals or the unused pharmaceuticals from the effluent. Since this R-1 product is planned to be used extensively going forward, please address the long term effect that this product has on the ground water.

State and Federal regulatory oversight provides a framework to ensure the safe use of recycled water covering treatment, distribution and use; and long-term negative impacts on ground water are not anticipated. Specific to your comment, the metal content of the effluent is very low (well below even the safe drinking water standards) to non-detectable. Similarly, the concentration of pharmaceuticals in recycled water are extremely low. For an in depth discussion, please refer to the attached publication by the Water Research Foundation entitled "Putting the Risk of Recycled Water into Perspective" which states the following:

Mr. Michael Moran

June 7, 2016

Page 2

...it could take anywhere from a few years to many millions of years of exposure to non-potable recycled water to reach the same exposure to PPCPs (Pharmaceuticals and Personal Care Products) that we get in a single day through routine activities.

Further, Volume 2 of the 2016 DOH Reuse Guidelines requires that recycled water be applied at a rate appropriate to plant uptake and evapotranspiration rates, thereby reducing the potential for percolation of the recycled water to the ground water.

Comment #2: *Much of the R-1 irrigated property in South Maui is adjacent to the coastal waters. Since the Federal Clean Water Act does not allow this water to be discharged into the ocean, how can the County assure that no toxic material flows from this program into the coastal waters from the sandy soils?*

Recycled Water Projects must use BMPs to control runoff, such as applying recycled water at a rate appropriate to plant uptake and evapotranspiration rates, and not irrigating during rainy periods.

Comment #3: *The proposed users of the R-1 treated effluent for irrigation are in many cases residential areas where the effluent will be used immediately next to habitable areas. With the strong wind gusts in South Maui, there will be no way to eliminate ingestion of the effluent products by humans and pets. Would it be prudent to use the future expansion of R-1 water use further from the coastal waters and from the inhabitable areas and use it for agricultural or other use?*

Recycled Water Projects must use BMPs to minimize public contact with recycled water spray or mist. Design considerations include proper selection of sprinkler heads in publicly accessible areas; and protection of items such as drinking fountains, picnic tables, barbeques, and portable water coolers from exposure to recycled water or mist. Operational considerations include scheduling and limiting times of application when the chances of exposure are lowest (e.g. 11 pm to 3 am).

We appreciate the time you have taken to share your concerns and will transmit a copy of the Draft EA when published for review and comment. Should you have any questions, please feel free to contact me at (808) 944-1821.

Sincerely,
FUKUNAGA & ASSOCIATES, INC.

Lynn Malinger, P.E.

cc: Joanie Gushiken, County of Maui, DEM-WWRD

Recycled Water: How Safe is It?

A Publication from WaterReuse Research Foundation

Putting the Risk of Recycled Water into Perspective

As water becomes a scarcer and more precious resource, many communities are making use of recycled water to address growing water demands and limited supplies. One of the hurdles to gaining public acceptance of recycled water projects is perceived human health risks.

Among the perceived risks is concern about the presence of trace concentrations of Pharmaceuticals and Personal Care Products (PPCPs) found in recycled water. But findings from a recent study indicate that, depending on the chemical and the exposure situation, it could take anywhere from a few years to many millions of years of exposure to non-potable recycled water to reach the same exposure to PPCPs that we get in a single day through routine activities.

An agricultural worker in a field irrigated with recycled water.

For example, the study concludes that an agricultural worker would have to toil for 16,000 years in a field irrigated with recycled water to receive the equivalent of a single dose of 17-beta estradiol (prescription hormone replacement). A child could play on a recycled-water-irrigated lawn for 110 million years before being exposed to the equivalent of one application of insect repellent (DEET). (For more results, see “What’s the Risk?” on page 3).

To assist in communicating the relative health risks associated with two approved non-potable uses of recycled water, agricultural and landscape irrigation, the WaterReuse Research Foundation and participating water agencies commissioned a risk assessment study of PPCPs commonly found in recycled water.

Out of the hundreds of PPCPs that can be detected in recycled water and the environment, a team of scientists identified 10 to include in the study. The selected chemicals include a variety of PPCPs, such as prescription drugs, over-the-counter drugs, household products, food additives and more. Some were chosen because of their associated health risks; others, because they are easily recognized. All are representative of the PPCPs found in recycled water.

To accomplish their task, the researchers studied four situations in which people might typically be exposed to recycled water used for landscape or agricultural irrigation:

- Child playing in a park or schoolyard
- Agricultural worker in the fields
- Landscaper worker maintaining lawns or shrubbery
- Golfer on the greens

These are called “exposure scenarios.” These theoretical scenarios all occur in environments irrigated with recycled water. They provide estimates of how much water a person might be exposed to over a period of time. In each situation, the researchers used a high estimate, wherein the subject encounters far more water on a regular basis than would be typical in real world circumstances. This is purposely done to build extra margins of safety into the risk assessment findings.

continued on page 2...

What is Recycled Water and Why Do We Use It?

Through nature’s cycles, all water on Earth is recycled water. But, typically, when we hear the term “recycled water” it means wastewater that is sent from our home or business through a pipeline system to a treatment facility where it is treated to a level consistent with its intended use or disposal method. It is then routed directly to a recycled water system for uses such as irrigation or industrial cooling.

Many communities use recycled water to irrigate parks and playgrounds.

There are various levels of treatment the water might undergo, including primary, secondary and tertiary. Recycled water that is used for landscape and agricultural irrigation is treated to a tertiary level, which includes disinfection.

Using precious drinking water for irrigation greatly increases demand and puts a tremendous strain on our limited water supplies, particularly during dry seasons.

In addition to irrigation applications, this highly-treated water has been approved by the federal government and many states for other uses including fire suppression, industrial processes and toilet flushing. Water that is not reused for a

continued on page 4...

PPCPs: A Fact of Everyday Life

Pharmaceuticals and Personal Care Products

While most organic and microbial material is removed from wastewater during the tertiary treatment process, studies have shown that trace concentrations of certain compounds, or chemicals, can be found in highly-treated recycled water. Many of the same compounds can also be found, in varying amounts, in drinking water and throughout the environment.

Some of these chemicals are grouped into a category known as Pharmaceuticals and Personal Care Products (PPCPs). As their name implies, these compounds are ingredients that can be found in every day products, such as

soaps, cosmetics, household cleaners and over-the-counter or prescription medications. They enter the recycled water system with the products that get washed down our sinks, washing machines, dishwashers, and toilets.

The ability to detect these chemicals at very low levels has outpaced the ability to completely remove them from the environment. For example, a prescription antibiotic, sulfamethoxazole, has been found in recycled water at a concentration of 1.4 microgram per liter (ug/L). A

microgram per liter is one part per billion, or the equivalent of a single sugar cube in an Olympic size swimming pool.

The risk assessment study highlighted in this publication sought to determine how much of these residual chemicals we are exposed to under specific recycled water usage scenarios and to communicate the potential health risks in a meaningful way.

For instance, though no more than 1.4 ug/L of sulfamethoxazole is measured in most recycled water, the acceptable, or safe, concentration for a golfer on a course irrigated with reused water is 190,000 ug/L. In simpler terms, it

would take that golfer 1,100,000 years of playing twice a week to be exposed to the equivalent of a single dose of the antibiotic.

The study used measured levels of PPCPs from a report prepared by a science advisory panel for the California State Water Resources Control Board; the concentrations used in the study represent the 90th percentile of detected concentrations in both secondary- and tertiary-treated effluent, or among the highest measured levels from wastewater treatment plants in that state.

“Putting the Risk...” continued...

Using known concentrations of the 10 PPCPs studied, the research team was able to calculate potential health risks. They also compared exposure to PPCPs in recycled water to PPCP exposures from other sources, such as one dose of ibuprofen or one application of insect repellent.

The risk assessment findings are being used to foster open communications and promote informed public discussions about the relative health risks associated with the use of recycled water.

What is Risk Assessment?

Risk assessment is a process that examines the toxicity of a chemical and the potential exposure to that chemical in order to estimate the risk to human health. Risk is a combination of toxicity and exposure ($\text{Risk} = \text{Toxicity} \times \text{Exposure}$). The risk assessment study discussed in this publication used the U.S. EPA risk assessment methodology, which includes assessing exposure, dose and characterization of risk.

Defining “Safe”

The idea of being “safe” is a relative concept. As individuals we make decisions about our own safety and the relative risks we are willing to take. As a society, we make collective decisions about safety and risk. These decisions weigh the risks against the benefits. Understanding those risks and benefits is fundamental to making sensible choices.

While scientists acknowledge that excess exposure to chemicals may pose health risks, our society as a whole sees benefit in using chemicals in controlled quantities to improve our lives. Therefore, “safe” or “acceptable” exposure levels are established for compounds that we come into contact with every day.

For the risk assessment study highlighted in this publication, acceptable concentrations of PPCPs were derived from Acceptable Daily Intake (ADI), which were in turn derived from chemical-specific information available in other existing studies.

For example, the acceptable daily intake for acetaminophen (Tylenol) is based on the therapeutic dose in combination with an additional factor for further protection of human health. The acceptable concentrations represent what can be present in recycled water and not exceed the ADI, based on the various exposure scenarios.

Next, the risk assessment team compared acceptable concentrations with actual concentrations of PPCPs found in recycled water. Actual concentrations are all considered “safe” and the comparison showed they are typically only a tiny fraction of acceptable concentrations.

For example, for a child on a playground irrigated with recycled water, the acceptable concentration of acetaminophen is 57,000 micrograms per liter, while the actual concentration detected in most recycled water is less than 0.55 micrograms per liter.

Viewed another way, actual concentrations

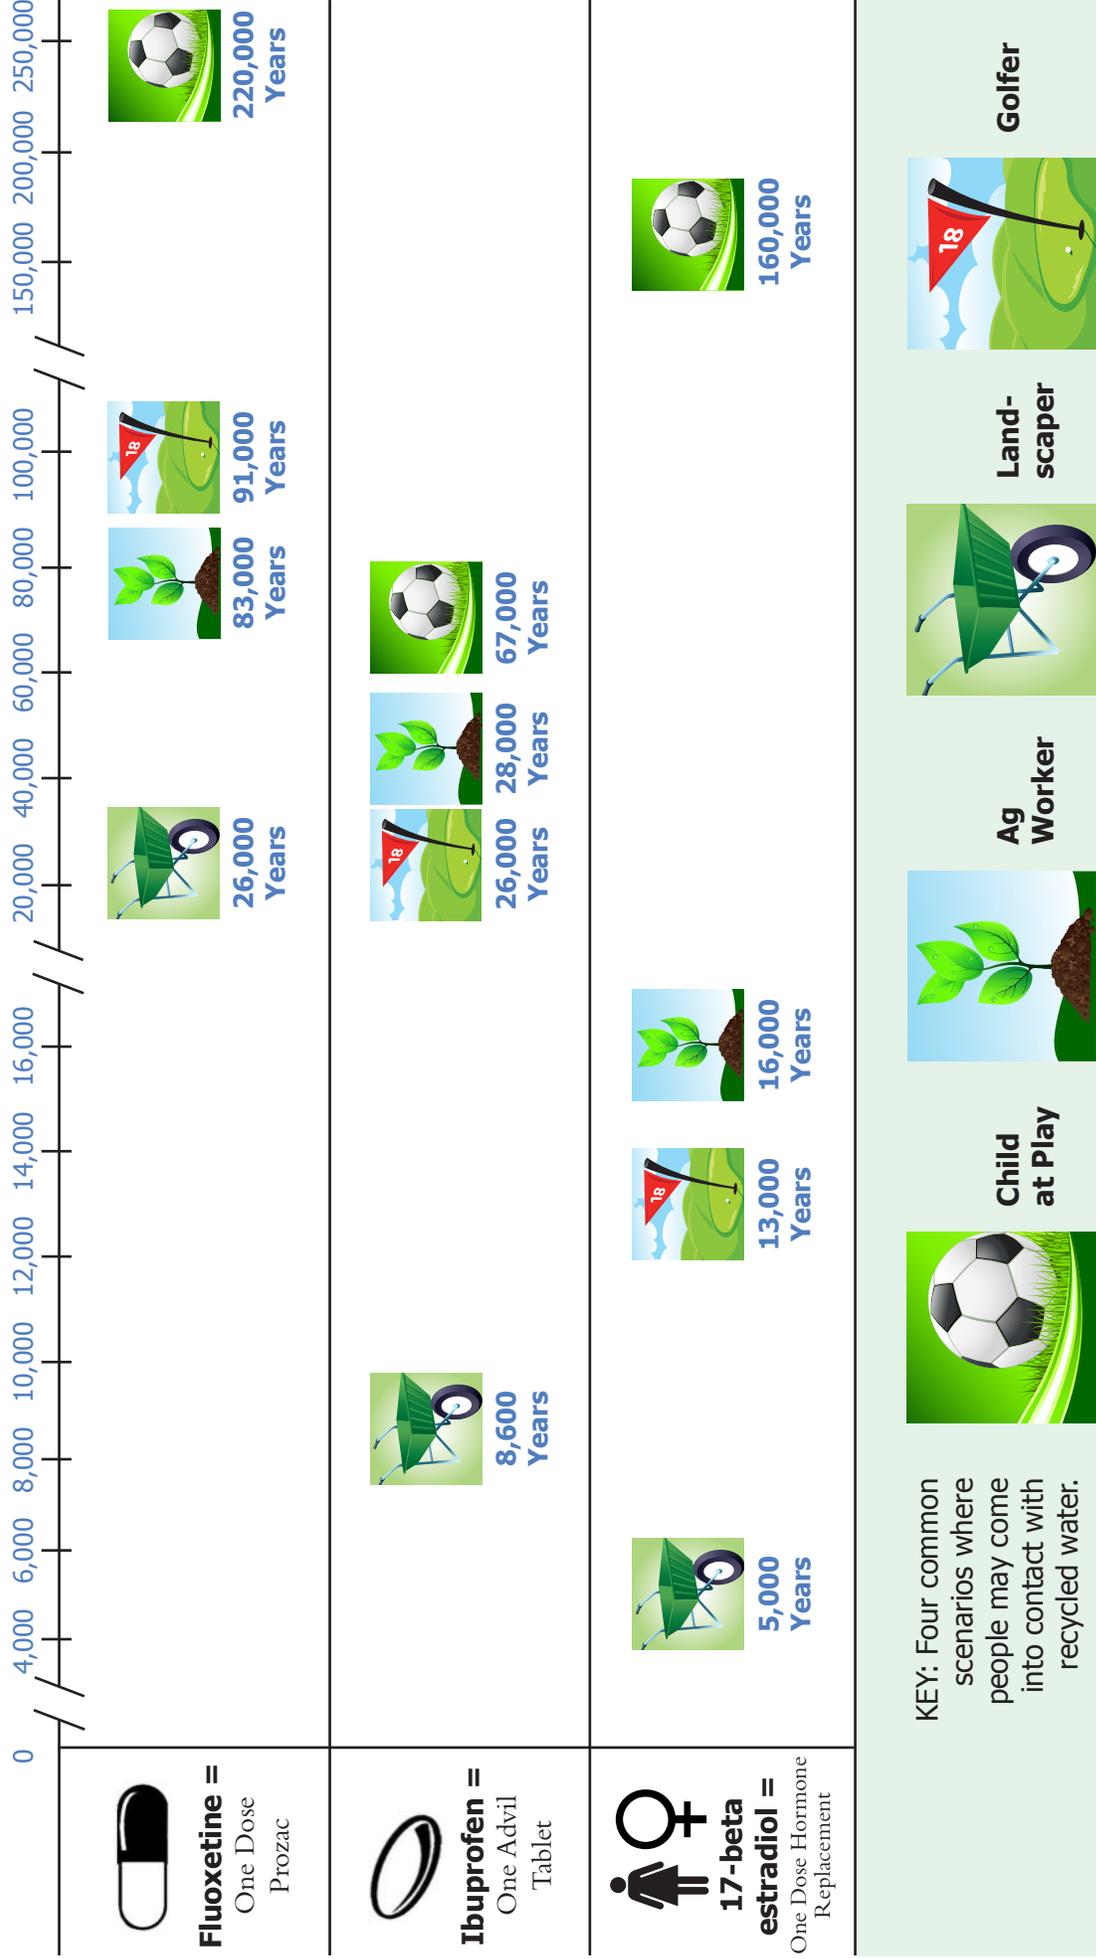

continued on page 4...

WHAT'S THE RISK?

A Comparison of Exposure to PPCPs from Recycled Water vs. Conventional Uses

This chart compares typical exposures to three Pharmaceuticals and Personal Care Products (PPCPs) — antidepressant, ibuprofen, hormone — with exposure to the same chemicals in recycled water under four different scenarios in which a person may come into contact with the water. For each scenario — child at play, agricultural worker, landscaper, and golfer — the chart shows how many years one could participate in that activity before reaching a single daily dose of the chemical from typical exposures.

Number of years of exposure to recycled water to equal conventional dose.

KEY: Four common scenarios where people may come into contact with recycled water.

FAQs

What are the most common uses for recycled water?

In California, agriculture accounts for approximately 50 percent of recycled water use while landscape irrigation accounts for about 20 percent. Recycled water has safely been used to irrigate public facilities such as school grounds, athletic fields, golf courses, parks and common areas of residential neighborhoods for many years. There have not been any reported cases of illness or allergies as a result of its use for landscape irrigation or agricultural uses. Other uses include industrial applications and groundwater recharge.

Is recycled water safe?

Tertiary-treated recycled water meets standards that allow it to be used for most non-drinking purposes. In California, the Regional Water Quality Control Board and State Department of Health Services have strict permitting and monitoring procedures to ensure the reliability of treatment processes and controlled use of recycled water. Disinfected tertiary-treated recycled water is virtually free from all pathogens, including viruses. Several long-term microbiological studies involving thousands of samples have confirmed that pathogens are reduced to non-detectable or insignificant levels in tertiary-treated recycled water.

How do PPCPs end up in recycled water?

The treatment process for wastewater is not designed to remove all the chemicals that become part of the waste stream through human consumption and excretion. Numerous studies have shown that residual amounts of PPCPs remain in treated wastewater at trace concentrations. PPCPs are believed to enter municipal wastewater through bathing, cleaning, laundry, and the disposal of unused pharmaceuticals and human waste.

Is there a treatment process that will remove pharmaceuticals?

The wastewater industry is investing millions of dollars to research the benefits of different treatment processes. Last year, one industry group undertook a study that compared the effectiveness of various treatment/removal processes for a variety of chemicals. The industry is currently conducting research to determine which processes are most effective in removing various chemical compounds, including pharmaceuticals.

How high are the concentrations of PPCPs in recycled water?

This depends on the level of treatment and the methods used by the wastewater treatment plant that produces your recycled water. Typically, trace levels of PPCPs in recycled water are found in the low microgram to low nanogram per liter range. The risk assessment study used the 90th percentile of measured occurrence data for secondary- and tertiary-treated recycled water presented in *Monitoring Strategies for Chemicals of Emerging Concern (CECs) in Recycled Water; Recommendations of a Science Advisory Panel. Final Draft. Calif. State Water Resources Control Board, June 25, 2010.*

Do these concentrations pose a risk to children on playgrounds and in parks?

The risk assessment showed that measured concentrations of PPCPs in recycled water do not pose unacceptable risks to children on playgrounds and parks. To help us understand that the health risks from recycled water are minimal, we can compare the exposure of a child on a playground irrigated with recycled water containing trace amounts of a specific PPCP, such as a common antibiotic, against a more familiar exposure, such as an adult dose of that same antibiotic that one might get from the doctor's office. In this example, a child would have to play on a playground for one hour per week, six months a year, with constant contact with recycled water, for 1,900,000 years before being exposed to the equivalent of one dose of that antibiotic.

Is there a risk for landscapers or agricultural workers who come in contact with recycled water?

The relative risks due to exposure for these workers is greater than for a child on a playground, but the risks are still well within an acceptable range. For instance, assuming a landscape worker is exposed to recycled water for an entire 8-hour work day, it would take 69,000 years for that worker to receive the equivalent of one dose of a common antibiotic.

"Defining 'Safe'" continued...

of acetaminophen in recycled water are nearly 100,000 times less than the safe levels for that child on a playground.

The team used the 90th percentile of measured PPCP concentrations in secondary- and tertiary-treated recycled water from a study that surveyed wastewater treatment plants in California.

"What is Recycled Water" continued...

specific purpose is typically disposed of under strict guidelines set by federal and state agencies.

Most North American communities waste vast amounts of increasingly scarce drinking water to irrigate lawns, gardens, parks, school grounds, highway medians, commercial landscaping and golf courses. Large quantities of drinking water are also used to grow food crops and support other important agricultural activities.

Using precious drinking water for irrigation greatly increases demand and puts a tremendous strain on our limited water supplies, particularly during dry seasons.

Sometimes it is not just a community's water supply that is stressed by these demands. Flows in rivers and waterways can

be impacted to the point that fish are unable to complete their reproductive cycles, thus endangering a species' ability to survive. Reduced flows in creeks and rivers can also increase the concentration of harmful pollutants, which adversely affects many aquatic species.

These are just a few of the reasons recycled water has become a highly valuable resource in many areas of the country.

Communities that take advantage of recycled water must adhere to strict health and safety guidelines that require routine testing. In the United States, recycled water has been safely used since 1929, with no known cases of illness or allergies as a result.

RE: Early Consultation Request
South Maui Recycled Water System Expansion Project
2nd 1.0 MG Tank and Pipeline Improvements
Job No. WW 15-01

Dear Ms. Malinger:

We are in receipt of your June 7, 2016 letter responding to our concerns about the subject project. We appreciate the time you spent responding to each of our issues. Our goal is not to disrupt or delay the county's project, but to protect the citizens and visitors to south Maui and to protect our ocean waters and the fragile marine environment.

Recent studies based on the testing of this very agency, Department of Health-CWB, have shown that the ocean water at Cove and Kalama Park have the worst water quality in the State of Hawaii. Those of us that have suffered from incidents of staph infection are not satisfied that the use of injection wells and irrigation with R1 water are adequately protecting ocean life nor sufficiently protecting users of the ocean. We firmly believe that injection wells and the use of R1 water adjacent to the ocean continue to be a health problem.

If the systems are working as you describe them, why is there a water quality problem? After even minor surgery, doctors advise their patients to stay out of the ocean to prevent risk of infection. This does not bode well for a clean ocean environment where tourism, our economy, is strongly dependent on recreational ocean activities.

We understand what is required by state and federal regulatory requirements. However, the proof is in the results. We believe that past and present disposal of waste water violates the clean water act. The county should have a permit from EPA to discharge into the ocean for both the R1 water and the injection wells.

The response that R1 water will not enter the ground water nor flow into the ocean is based on wishful thinking. The idea that the amount of R1 irrigation can be controlled at a “rate appropriate to plant intake and evapotranspiration rates” is nether possible nor practical. The rate of evaporation varies widely with humidity, wind, shade, air pressure, temperature and increase in surface area. To design and control a system that irrigates at rates determined by the above variables does not now exist and is certainly not a process used by the county at Cove and Kalama Parks. Therefore, we are convinced that the R1 water enters both the ground water and the ocean.

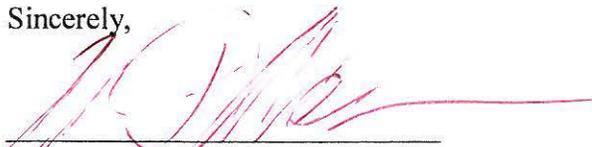

At Kalama Park, the county does not abide by the 2016 Department of Health Guidelines published in January 2016. There are many sections of the DOH manual that relate to the danger of ingestion or contact with R1 water.

To rely on the Department of Health’s Guidelines of January 2016, the Best Management Practices fall short of having a healthy management system safe for the public and ocean life. We have seen at Mahana Ridge, that the Best Management Practices for storm water did not provide a system that protected the ocean. We have no confidence in relying on this type of solution that has a track record of failure. The county needs to be in control of its waste water until it has safely disposed of its harmful chemicals and bacteria.

Disposal of waste water further from the ocean would be a good first step in cleaning up our ocean environment. It offers less chance of near-shore contamination.

KCA is very interested in having a sound waste water recycling program. We stand ready to support a program that would best serve the community.

Sincerely,

Mike Moran, President
Kihei Community Association

cc: Joanie Gushiken, County of Maui,
Dept. of Environmental Management, Waste Water Reclamation Division

July 21, 2016

Mr. Michael Moran, President
Kihei Community Association
P.O. Box 662
Kihei, Hawaii 96753

SUBJECT: Early Consultation Request
South Maui Recycled Water System Expansion Project
2nd 1.0 MG Tank and Pipeline Improvements
Job No. WW15-01

Dear Mr. Moran:

We are in receipt of your letter dated June 22, 2016 providing additional comments on the subject project. We offer the following in response to your comments.

The proposed project involves installation of a second 1 million gallon (MG) tank for storage of R-1 recycled water produced at the Kihei Wastewater Reclamation Facility (WWRF) and pipeline upgrades. The project does not include work on the injection wells and does not include work near Cove Park and Kalama Park.

R-1 recycled water is the highest grade of recycled water for non-potable use, distributed through the South Maui Recycled Water System. During the summer months, the County's Wastewater Reclamation Division (WWRD) delivers approximately 1.8 million gallons per day (MGD) of recycled water to approximately 30 customers in South Maui. The proposed 2nd 1.0 MG tank is planned to be located on the existing County site adjacent to the existing 1.0 MG R-1 tank, and the proposed pipeline improvements would occur at the Kihei WWRF. The proposed improvements will create a more robust system that can accommodate the increase in recycled water demands during the peak summer months, provide redundancy and greater reliability, and allow for an increase in the number of recycled water customers.

The R-1 recycled water produced by the Kihei WWRF is governed by the State Department of Health Standards for Wastewater Systems (Hawaii Administrative Rules, Title 11, Chapter 62). R-1 water is highly disinfected (99.999 percent virus inactivation and removal) and is safe and suitable for irrigation in the South Maui Recycled Water System service area, which is described in the Draft Environmental Assessment. Please also refer to the response letter from the DOH Wastewater Branch dated July 6, 2016, attached for your convenience.

Your letter mentions risk of staph infection. You may wish to review an informative presentation entitled *Maui's Bacteria Issues*, which was presented by DOH-CWB to the public on Maui in 2010. The slides can be downloaded from the following website:

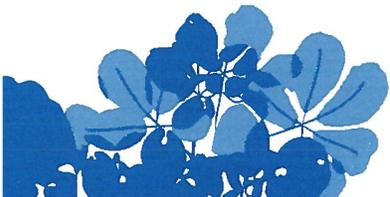

http://health.hawaii.gov/cwb/files/2013/05/Workshop_20100901MauiBacteriaIssues.pdf

We appreciate the time you have taken to comment on the project.

Sincerely,
FUKUNAGA & ASSOCIATES, INC.

Lynn Malinger, P.E.

KCA response

July 6, 2016

Mr. Mike Moran, President
Kihei Community Association
905 Makahiki Way
Honolulu, HI 96826
Email: kca@gokihei.org

Dear Mr. Moran:

Subject: South Maui Recycled Water System Expansion Project
Second 1.0 MG Tank and Pipeline Improvements

Thank you for your May 15, 2016 letter, received by the Department of Health (Department) on June 2, 2016. The Department offers the following comments to address your concerns on the use of R-1 for irrigation purposes:

Comment 1: It is our understanding that the treatment for R-1 water does not remove the heavy metals or unused pharmaceuticals from the effluent. Since this R-1 product is planned to be used extensively going forward, please address the long term effect that this product has on the groundwater.

Response: Although not designed to remove metals or pharmaceuticals from wastewater effluent, some degree of constituent removal may occur depending on the degree of filtration. Research and studies on metals, pharmaceuticals and the effect on groundwater continues; however there currently is no standard or accepted risk assessment, limit, requirement, or determination of any long term effects associated with R-1 irrigation.

Comment 2: Much of the R-1 irrigated property in South Maui is adjacent to the coastal waters. Since the Federal Clean Water Act does not allow this water to be discharged into the ocean, how can the County assure that no toxic material flows from this program into the coastal waters from the sandy soils?

Response: The *Reuse Guidelines*, which were revised by the Department of Health in January 2016, provides for Best Management Practices to prevent runoff, ponding, or discharge into state waters. Use of sensors and automatic sprinklers cease R-1 irrigation when rain occurs.

Mr. Mike Moran
July 6, 2016
Page 2

The Department reviews irrigation plans before approving construction of an R-1 irrigation system and inspects the constructed system before approving its use. This helps ensure that the irrigation system will be properly controlled. To date, the Department knows of no incident where R-1 discharge into state waters occurred as a result of R-1 irrigation.

Comment 3: The proposed users of the R-1 treated effluent for irrigation are in many cases residential areas where the effluent will be used immediately next to habitable areas. With the strong wind gusts in South Maui, there will be no way to eliminate ingestion of the effluent product by humans and pets. Would it be prudent to use future expansion of R-1 water use further from the coastal waters and from the inhabitable areas and use it for agriculture or other use?

Response: Strong winds do not entail that R-1 will be ingested by humans or pets. R-1 irrigation is not approved by the Department unless irrigation is scheduled to occur when public accessibility is minimal, that adequate warning signs are posted in R-1 irrigated areas, and that a recycled water manager is designated to ensure the proper operation and maintenance of the irrigation system. R-1 has been used for irrigation purposes in Hawaii for approximately 20 years and during that time, there have been no reported incidents where humans or pets have ingested R-1 water.

R-1 has also been used without incident to irrigate areas near to the coast. These areas include Lahaina on Maui; Ewa Beach and Kapolei on Oahu; and Kona and Waikoloa on Hawaii Island. Use of R-1 for agriculture is currently being planned for central Oahu.

We hope these responses will allay your concerns and increase your support for R-1 irrigation.

Should you have any questions, please contact April Matsumura of my staff at (808) 586-4294.

Sincerely,

SINA PRUDER, P.E., CHIEF
Wastewater Branch

Re: Early Consultation Request
South Maui Recycled Water System Expansion Project
2nd 1.0 MG Tank and Pipeline Improvements
Job No. WW15-01

Dear Ms. Malinger,

We are in receipt of your request for review of the above referenced project. Monsanto supports the improvements of the South Maui Recycled Water System as presented, including the new electrical service to be pulled from existing power lines located on our property. We believe these improvements will increase availability of R-1 water for the service area and provide redundancy in the existing system.

Sincerely,

Yarrow Flower
Land Asset Manager

EPO 16-238

July 26, 2016

Ms. Lynn Malinger
Fukunaga & Associates, Inc.
1357 Kapiolani Boulevard, Suite 1530
Honolulu, Hawaii 96814
Email: malinger@fukunagaengineers.com

Dear Ms. Malinger:

**SUBJECT: Draft Environmental Assessment (DEA) for South Maui Recycled Water Systems Expansion Project – 2nd 1.0 MG Tank and Pipeline Improvements, Makawao, Maui
TMK: 2-2-024:010, 2-2-002:075**

The Department of Health (DOH), Environmental Planning Office (EPO), acknowledges receipt of your DEA to our office via the OEQC link:

http://oeqc.doh.hawaii.gov/Shared%20Documents/EA_and_EIS_Online_Library/Maui/2010s/2016-07-08-MA-5B-DEA-South-Maui-Recycled-Water-System-Expansion.pdf

In the development and implementation of all projects, EPO strongly recommends regular review of State and Federal environmental health land use guidance. State standard comments and available strategies to support sustainable and healthy design are provided at: <http://health.hawaii.gov/epo/landuse>. Projects are required to adhere to all applicable standard comments. EPO has recently updated the environmental Geographic Information System (GIS) website page. It now compiles various maps and viewers from our environmental health programs. The eGIS website page is continually updated so please visit it regularly at: <http://health.hawaii.gov/epo/eqis>.

EPO also encourages you to examine and utilize the Hawaii Environmental Health Portal at: <https://eha-cloud.doh.hawaii.gov>. This site provides links to our e-Permitting Portal, Environmental Health Warehouse, Groundwater Contamination Viewer, Hawaii Emergency Response Exchange, Hawaii State and Local Emission Inventory System, Water Pollution Control Viewer, Water Quality Data, Warnings, Advisories and Postings.

We suggest you review the requirements of the CWB (HAR, Section 11-54-1.1, -3, 4-8) and/or the National Pollutant Discharge Elimination System (NPDES) permit (HAR, Chapter 11-55) at: <http://health.hawaii.gov/cwb>. If you have any questions, please contact the Clean Water Branch, Engineering Section at (808) 586-4309 or cleanwaterbranch@doh.hawaii.gov. If your project involves waters of the U.S., it is highly recommended that you contact the Army Corps of Engineers, Regulatory Branch at: (808) 835-4303.

Please note that all wastewater plans must conform to applicable provisions of the Department of Health's Administrative Rules, Chapter 11-62, "Wastewater Systems". We reserve the right to review the detailed wastewater plans for conformance to applicable rules. Should you have any questions, please review online guidance at: <http://health.hawaii.gov/wastewater> and contact the Planning and Design Section of the Wastewater Branch at (808) 586-4294.

Ms. Lynn Malinger
Page 2
July 26, 2016

You may also wish to review the draft Office of Environmental Quality Control (OEQC) viewer at: <http://eha-web.doh.hawaii.gov/oegc-viewer>. This viewer geographically shows where some previous Hawaii Environmental Policy Act (HEPA) {Hawaii Revised Statutes, Chapter 343} documents have been prepared.

In order to better protect public health and the environment, the U.S. Environmental Protection Agency (EPA) has developed a new environmental justice (EJ) mapping and screening tool called EJSCREEN. It is based on nationally consistent data and combines environmental and demographic indicators in maps and reports. EPO encourages you to explore, launch and utilize this powerful tool in planning your project. The EPA EJSCREEN tool is available at: <http://www.epa.gov/ejscreen>.

We request that you utilize all of this information on your proposed project to increase sustainable, innovative, inspirational, transparent and healthy design. Thank you for the opportunity to comment.

Mahalo nui loa,

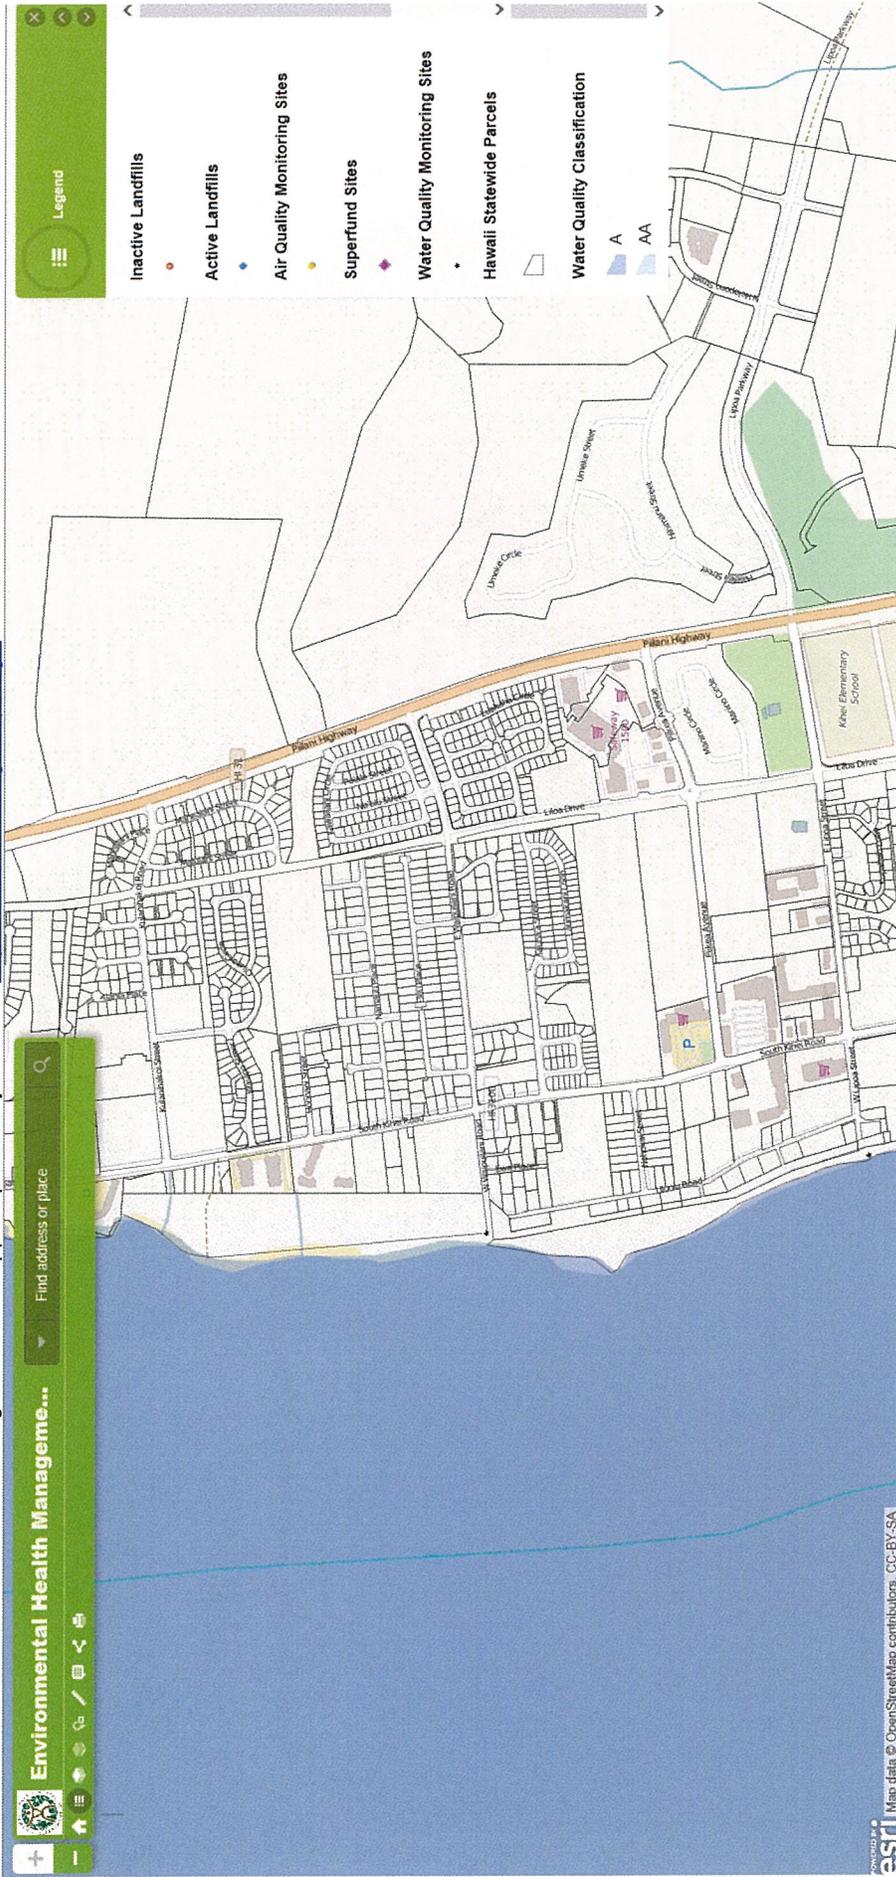

Laura Leialoha Phillips McIntyre, AICP
Program Manager, Environmental Planning Office

Attachment 6: U.S. EPA EJSCREEN Report for Project Area

EJSCREEN Report (Version 2016)

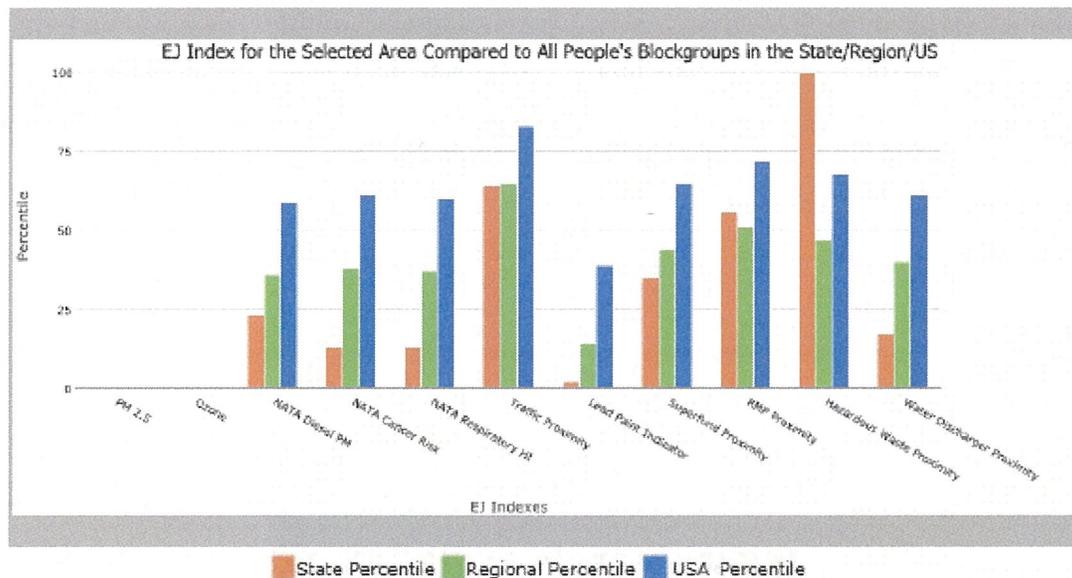

0.15 mile Ring Centered at 20.757191,-156.458198, HAWAII, EPA Region 9

Approximate Population: 886

Input Area (sq. miles): 0.07

Selected Variables	State Percentile	EPA Region Percentile	USA Percentile
EJ Indexes			
EJ Index for PM2.5	N/A	N/A	N/A
EJ Index for Ozone	N/A	N/A	N/A
EJ Index for NATA* Diesel PM	23	38	59
EJ Index for NATA* Air Toxics Cancer Risk	13	38	61
EJ Index for NATA* Respiratory Hazard Index	13	37	60
EJ Index for Traffic Proximity and Volume	64	65	83
EJ Index for Lead Paint Indicator	2	14	39
EJ Index for Superfund Proximity	35	44	65
EJ Index for RMP Proximity	58	51	72
EJ Index for Hazardous Waste Proximity	100	47	68
EJ Index for Water Discharger Proximity	17	40	61

This report shows the values for environmental and demographic indicators and EJSCREEN indexes. It shows environmental and demographic raw data (e.g., the estimated concentration of ozone in the air), and also shows what percentile each raw data value represents. These percentiles provide perspective on how the selected block group or buffer area compares to the entire state, EPA region, or nation. For example, if a given location is at the 95th percentile nationwide, this means that only 5 percent of the US population has a higher block group value than the average person in the location being analyzed. The years for which the data are available, and the methods used, vary across these indicators. Important caveats and uncertainties apply to this screening-level information, so it is essential to understand the limitations on appropriate interpretations and applications of these indicators. Please see EJSCREEN documentation for discussion of these issues before using reports.

* The National-Scale Air Toxics Assessment (NATA) is EPA's ongoing, comprehensive evaluation of air toxics in the United States. EPA developed the NATA to prioritize air toxics, emission sources, and locations of interest for further study. It is important to remember that NATA provides broad estimates of health risks over geographic areas of the country, not definitive risks to specific individuals or locations. More information on the NATA analysis can be found at: <https://www.epa.gov/national-air-toxics-assessment>.

For additional information, see: www.epa.gov/environmentaljustice

EJSCREEN is a screening tool for pre-decisional use only. It can help identify areas that may warrant additional consideration, analysis, or outreach. It does not provide a basis for decision-making, but it may help identify potential areas of EJ concern. Users should keep in mind that screening tools are subject to substantial uncertainty in their demographic and environmental data, particularly when looking at small geographic areas. Important caveats and uncertainties apply to this screening-level information, so it is essential to understand the limitations on appropriate interpretations and applications of these indicators. Please see EJSCREEN documentation for discussion of these issues before using reports. This screening tool does not provide data on every environmental impact and demographic factor that may be relevant to a particular location. EJSCREEN outputs should be supplemented with additional information and local knowledge before taking any action to address potential EJ concerns.

Dear Ms. Malinger;

SUBJECT: Draft Environmental Assessment for the South Maui Recycled Water System Expansion project, 2nd 1.0 MG Tank and Pipeline Improvements

Thank you for the opportunity to review and comment on the subject matter. The Department of Land and Natural Resources' (DLNR) Land Division distributed or made available a copy of your report pertaining to the subject matter to DLNR Divisions for their review and comments.

At this time, enclosed are comments from the Engineering Division on the subject matter. Should you have any questions, please feel free to call Lydia Morikawa at 587-0410. Thank you.

Sincerely,

A handwritten signature in blue ink, appearing to read "Russell Y. Tsuji".

COMMENTS

The rules and regulations of the National Flood Insurance Program (NFIP), Title 44 of the Code of Federal Regulations (44CFR), are in effect when development falls within a designated Flood Hazard.

The owner or the project property and/or their representative is responsible to research the Flood Hazard Zone designation for the project. Flood Hazard Zone designations can be found using the Flood Insurance Rate Map (FIRM), which can be accessed through the Flood Hazard Assessment Tool (FHAT) (<http://gis.hawaiinfip.org/FHAT>).

National Flood Insurance Program establishes the rules and regulations of the NFIP - Title 44 of the Code of Federal Regulations (44CFR). The NFIP Zone X is a designation where there is no perceived flood impact. Therefore, the NFIP does not regulate any development within a Zone X designation.

Be advised that 44CFR reflects the minimum standards as set forth by the NFIP. Local community flood ordinances may take precedence over the NFIP standards as local designations prove to be more restrictive. If there are questions regarding the local flood ordinances, please contact the applicable County NFIP Coordinators below:

- o Oahu: City and County of Honolulu, Department of Planning and Permitting (808) 768-8098.
- o Hawaii Island: County of Hawaii, Department of Public Works (808) 961-8327.
- o Maui/Molokai/Lanai County of Maui, Department of Planning (808) 270-7253.
- o Kauai: County of Kauai, Department of Public Works (808) 241-4846.

Signed: 
CARTY S. CHANG, CHIEF ENGINEER

Joanie Gushiken
County of Maui
Department of Environmental Management
Wastewater Reclamation Division
2200 Main Street, Suite 610
Wailuku, HI 96793-2155

Dear Joanie Gushiken,

SUBJECT: Draft Environmental Assessment (EA) for South Maui Recycled Water System Expansion Project – 2nd 1.0 MG Tank and Pipeline Improvements

The Office of Environmental Quality Control (OEQC) has reviewed the draft EA prepared for the subject project and offers the following comments for your consideration:

1. The draft EA notes that low-impact development (LID) techniques “will be considered” for the paved perimeter road. The OEQC encourages committing to maximizing use of these techniques in designing the road, including pavers and pervious pavements, to help groundwater recharge and decrease stormwater runoff. Resources for low-impact development can be found here: <http://planning.hawaii.gov/lud/>.
2. For any landscaping or re-vegetation, the OEQC recommends using native species to absorb pollution and sediment, restore stability, and ensure compliance with Act 233, Session Laws of Hawaii.

Thank you for the opportunity to comment on the draft EA. We look forward to a response that will also be included in the final EA. If you have any questions, please contact our office at (808) 586-4185.

Sincerely,

Scott Glenn, Director

235 S. Beretania Street, Room 702
Honolulu, Hawai'i 96813

SUBJECT: Response to Comments on the Draft Environmental Assessment
South Maui Recycled Water System Expansion Project
2nd 1.0 MG Tank and Pipeline Improvements
Job No. WW15-01

Dear Mr. Glenn:

Thank you for your letter dated July 14, 2016 providing comments on the Draft Environmental Assessment for the subject project. We offer the following in response to the comments provided.

Comment #1: *The draft EA notes that low-impact development (LID) techniques "will be considered" for the paved perimeter road. The OEQC encourages committing to maximizing use of these techniques in designing the road, including pavers and pervious pavements, to help groundwater recharge and decrease stormwater runoff. Resources for low-impact development can be found here: <http://planning.hawaii.gov/lud/>.*

Pervious pavement and pavers are best suited for light duty traffic, whereas, the tank perimeter road must accommodate construction and utility vehicles. Low impact development will be incorporated into the site design to help groundwater recharge and decrease stormwater runoff. Approximately half of the 1.33 acre tank site will remain pervious and the tank site is surrounded by agricultural land which is also pervious.

Comment #2: *For any landscaping or re-vegetation, the OEQC recommends using native species to absorb pollution and sediment, restore stability, and ensure compliance with Act 233, Session Laws of Hawaii.*

Duly noted.

We appreciate the input provided by your department. Should you have any questions, please feel free to contact me at (808) 944-1821.

Sincerely,
FUKUNAGA & ASSOCIATES, INC.

Lynn Malinger, P.E.

RECEIVED
2016 AUG -2 PM 3:04
WASTEWATER
RECLAMATION DIVISION
COUNTY OF MAUI

Dear Mr. Stant:

Subject: Draft Environmental Assessment South Maui Recycled Water System Expansion Project, 2nd 1.0 MG Tank and Pipeline Improvements, Kihei, Maui; TMK: (2) 2-2-002:075 and 2-2-024:010

Thank you for the opportunity to provide comments on this Draft Environmental Assessment (Draft EA) for the South Maui recycled water system expansion project, located in Kihei, Maui. The Draft EA review material was transmitted to our office via letter dated July 8, 2016.

It is our understanding that the County of Maui, Department of Environmental Management proposes to improve and expand the use of recycled water in the Kihei region. The proposed expansion and improvements to the recycled water system in Kihei will multiply the Wastewater Reclamation Division's water service options, and will provide greater reliability for its customers, as well as allow greater water use flexibility for the region.

The project proposes to construct a new 1.0 million gallon recycled water storage tank and appurtenances adjacent to the existing water storage tank. The new tank dimensions would be similar to the existing tank, approximately 20 feet high and 100 feet in diameter. It will provide new electrical service from an existing Monsanto overhead line and seeks new security lighting at the tank site. The project will upgrade approximately 400 feet of existing 14-inch recycled water line to 18-inch recycled water line, replace the effluent pump station flow meter, and provide a new meter vault at the Kihei wastewater recycling facility.

The Office of Planning (OP) has reviewed the transmitted material and has the following comments to offer:

Mr. Stewart Stant
Director
County of Maui
Department of Environmental Management
Wastewater Reclamation Division
July 28, 2016
Page 2

- 1) The Draft EA addresses a number of our comments made in a previous pre-consultation letter dated February 17, 2016 (Reference Number P-15046). The Draft EA:
 - a) Examines the goals and objectives of the Hawaii Coastal Zone Management program as listed in Hawaii Revised Statutes (HRS) § 205A-2;
 - b) Confirms that the entire project area is outside of the Special Management Area, as delineated by the County of Maui;
 - c) Lists best management practices to be used during the construction phase to limit coastal erosion/sediment loss issues such as sediment traps, silt fences, and dust fences;
 - d) Analyzes the impact from stormwater runoff on the nearby water resources; and
 - e) Considers the use of low impact development design features to reduce the negative effects of stormwater runoff on the nearshore environment.

- 2) Section 3.2, pages 17-19 of the Draft EA addresses the project's consistency with the objectives and policies of the Hawaii State Plan, as listed in HRS Chapter 226. As stated in the Draft EA, the objectives and policies applicable to this project include:
 - HRS § 226-13, Objectives and policies for the physical environment – land, air, and water quality;
 - HRS § 226-14, Objectives and policies for facility systems – in general; and
 - HRS § 226-16, Objective and policies for facility systems – water.

The Final Environmental Assessment (Final EA) should include an analysis that addresses the Hawaii State Plan in its entirety. The analysis should indicate whether the proposed project conforms to or is in conflict with the goals, objectives, policies, and priority guidelines listed in the Hawaii State Plan. The most efficient method is summarizing these in tabular form, followed by discussion passages. If any of these are not applicable, the Final EA should affirmatively state such determination.

Mr. Stewart Stant
Director
County of Maui
Department of Environmental Management
Wastewater Reclamation Division

SUBJECT: Final Environmental Assessment
South Maui Recycled Water System Expansion Project
2nd 1.0 MG Tank and Pipeline Improvements
TMK 2-2-024:010 & 2-2-002:075, Kihei, Maui

Dear Mr. Asuncion:

Thank you for your correspondence dated July 28, 2016 acknowledging that the Draft Environmental Assessment addresses pre-consultation comments and the project's consistency with the objectives and policies of the Hawaii State Plan. We offer the following in response to your comment:

The Final Environmental Assessment (Final EA) should include an analysis that addresses the Hawaii State Plan in its entirety. The analysis should indicate whether the proposed project conforms to or is in conflict with the goals, objectives, policies, and priority guidelines listed in the Hawaii State Plan. The most efficient method is summarizing these in tabular form, followed by discussion passages. If any of these are not applicable, the Final EA should affirmatively state such determination.

A detailed analysis of the goals, objectives, policies, and priority guidelines is attached and will be included with this response letter in the appendix. A summary of the applicable points will be included in the text of the EA.

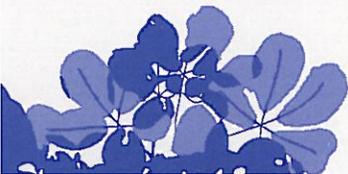

Thank you for your assistance and participation in this environmental review process. We will advise you when the Final EA is published.

Sincerely,
FUKUNAGA & ASSOCIATES, INC.

Lynn Malinger, P.E.

cc: Joanie Gushiken, County of Maui, DEM-WWRD

HAWAII STATE PLAN, HAWAII REVISED STATUTES, CHAPTER 226			
S = Supportive, N/S = Not Supportive, N/A = Not Applicable			
	S	N/S	N/A
Section 226-4: State Goals.			
In order to guarantee, for present and future generations, those elements of choice and mobility that insure that individuals and groups may approach their desired levels of self-reliance and self-determination, it shall be the goal of the State to achieve:			
(1) A strong, viable economy, characterized by stability, diversity, and growth, that enables the fulfillment of the needs and expectations of Hawaii's present and future generations.	X		
(2) A desired physical environment, characterized by beauty, cleanliness, quiet, stable natural systems, and uniqueness, that enhances the mental and physical well-being of the people.	X		
(3) Physical, social, and economic well-being, for individuals and families in Hawaii, that nourishes a sense of community responsibility, of caring, and of participation in community life.			X
Discussion: The proposed project supports the state goals for a strong, viable economy and desired physical environment by creating a more robust recycled water system that supplies a valuable alternate water source to meet non-potable demands, including agricultural irrigation; and thereby reserves potable water for potable water needs as well as decreases the use of injection wells for effluent disposal.			
Section 226-5: Objective for Population			
It shall be the objective in planning for the State's population to guide population growth to be consistent with the achievement of physical, economic, and social objectives contained in this chapter.			X
Section 226-6: Objectives for the Economy – In General			
(1) Increased and diversified employment opportunities to achieve full employment, increased income and job choice, and improved living standards for Hawaii's people, while at the same time stimulating the development and expansion of economic activities capitalizing on defense, dual-use, and science and technology assets, particularly on the neighbor islands where employment opportunities may be limited.			X
(2) A steadily growing and diversified economic base that is not overly dependent on a few industries, and includes the development and expansion of industries on the neighbor islands.			X
Section 226-7: Objectives and Policies for the Economy – Agriculture.			
(A) Planning for the State's economy with regard to agriculture shall be directed towards achievement of the following objectives:			
(1) Viability of Hawaii's sugar and pineapple industries.			X
(2) Growth and development of diversified agriculture throughout the State.	X		
(3) An agriculture industry that continues to constitute a dynamic and essential component of Hawaii's strategic, economic, and social well-being.			X
(B) To achieve the agriculture objectives, it shall be the policy of this State to:			
(1) Establish a clear direction for Hawaii's agriculture through stakeholder commitment and advocacy.			X
(2) Encourage agriculture by making the best use of natural resources.	X		
(3) Provide the governor and the legislature with information and options needed for prudent decision-making for the development of agriculture.			X
(4) Establish strong relationships between the agricultural and visitor industries for mutual marketing benefits.			X
(5) Foster increased public awareness and understanding of the contributions and benefits of agriculture as a major sector of Hawaii's economy.			X
(6) Seek the enactment and retention of federal and state legislation that benefits Hawaii's agricultural industries.			X
(7) Strengthen diversified agriculture by developing an effective promotion, marketing, and distribution system between Hawaii's food producers and consumers in the State, nation, and world.			X

HAWAII STATE PLAN, HAWAII REVISED STATUTES, CHAPTER 226		S	N/S	N/A
S = Supportive, N/S = Not Supportive, N/A = Not Applicable				
(8)	Support research and development activities that strengthen economic productivity in agriculture, stimulate greater efficiency, and enhance the development of new products and agricultural by-products.			X
(9)	Enhance agricultural growth by providing public incentives and encouraging private initiatives.			X
(10)	Assure the availability of agriculturally suitable lands with adequate water to accommodate present and future needs.	X		
(11)	Increase the attractiveness and opportunities for an agricultural education and livelihood.			X
(12)	In addition to the State's priority on food, expand Hawaii's agricultural base by promoting growth and development of flowers, tropical fruits and plants, livestock, feed grains, forestry, food crops, aquaculture, and other potential enterprises.			X
(13)	Promote economically competitive activities that increase Hawaii's agricultural self-sufficiency, including the increased purchase and use of Hawaii-grown food and food products by residents, businesses, and governmental bodies as defined under section 103D-104.			X
(14)	Promote and assist in the establishment of sound financial programs for diversified agriculture.			X
(15)	Institute and support programs and activities to assist the entry of displaced agricultural workers into alternative agricultural or other employment.			X
(16)	Facilitate the transition of agricultural lands in economically nonfeasible agricultural production to economically viable agricultural uses.			X
(17)	Perpetuate, promote, and increase use of traditional Hawaiian farming systems, such as the use of loko i'a, māla, and irrigated lo'i, and growth of traditional Hawaiian crops, such as kalo, 'uala, and 'ulu.			X
(18)	Increase and develop small-scale farms.			X
Discussion: Recycled water is a valuable water resource that can be used to meet non-potable water demands, and can be ideal for agricultural irrigation. The subject project will create a more robust storage and distribution system that can accommodate agricultural irrigation demands.				
Section 226-8: Objective for the Economy – Visitor Industry.				
	Planning for the State's economy with regard to the visitor industry shall be directed towards the achievement of the objective of a visitor industry that constitutes a major component of steady growth for Hawaii's economy.			X
Section 226-9: Objective and Policies for the Economy – Federal Expenditures				
	Planning for the State's economy with regard to federal expenditures shall be directed towards achievement of the objective of a stable federal investment base as an integral component of Hawaii's economy.			X
Section 226-10: Objective for the Economy – Potential Growth and Innovative Activities.				
	Planning for the State's economy with regard to potential growth and innovative activities shall be directed towards achievement of the objective of development and expansion of potential growth and innovative activities that serve to increase and diversify Hawaii's economic base.			X
Section 226-10.5: Objectives for the Economy – Information Industry				
	Planning for the State's economy with regard to telecommunications and information technology shall be directed toward recognizing that broadband and wireless communication capability and infrastructure are foundations for an innovative economy and positioning Hawaii as a leader in broadband and wireless communications and applications in the Pacific Region.			X

HAWAII STATE PLAN, HAWAII REVISED STATUTES, CHAPTER 226			
S = Supportive, N/S = Not Supportive, N/A = Not Applicable			
S	N/S	N/A	
Section 226-11: Objectives for the Physical Environment – Land-Based, Shoreline, and Marine Resources.			
Planning for the State’s physical environment with regard to land-based, shoreline, and marine resources shall be directed towards achievement of the following objectives:			
			X
			X
Section 226-12: Objective for the Physical Environment – Scenic, Natural Beauty, and Historic Resources.			
Planning for the State’s physical environment shall be directed towards achievement of the objective of enhancement of Hawaii’s scenic assets, natural beauty, and multi-cultural/historical resources.			
			X
Section 226-13: Objectives and policies for the Physical Environment – Land, Air, and Water Quality			
(A) Planning the State’s physical environment with regard to land, air, and water quality shall be directed towards achievement of the following objectives:			
	X		
			X
(B) To achieve the land, air, and water quality objectives, it shall be the policy of this State to:			
			X
	X		
	X		
			X
			X
	X		
	X		
			X
Discussion: The proposed project will promote the proper management of Hawaii’s water resources by providing an alternative source so that water is put to its best and highest use; i.e. potable water available for potable water purposes. Further, reuse will decrease effluent disposal through injection wells. This project also supports urban development in close proximity to the existing Kihei WWRF and recycled water system.			
Section 226-14: Objective and Policies for Facility Systems – In General			
(A) Planning for the State’s facility systems in general shall be directed towards achievement of the objective of water, transportation, waste disposal, and energy and telecommunication systems that support statewide social, economic, and physical objectives.			
	X		
(B) To achieve the general facility systems objective, it shall be the policy of this State to:			
	X		
	X		
	X		

HAWAII STATE PLAN, HAWAII REVISED STATUTES, CHAPTER 226		S	N/S	N/A
S = Supportive, N/S = Not Supportive, N/A = Not Applicable				
(4)	Pursue alternative methods of financing programs and projects and cost-saving techniques in the planning, construction, and maintenance of facility systems.	X		
Discussion: The proposed project supports State and county plans which emphasize the prudent reuse of wastewater to serve non-potable needs, and reduce reliance on injection wells. Further, the true cost of recycled water is highly subsidized by the County and cost to users is lower than potable water rates. This project may be funded by Federal Funds through the State of Hawaii's Clean Water State Revolving Fund Program, which is a low interest loan available to county and state agencies.				
Section 226-15: Objectives and Policies for Facility Systems – Solid and Liquid Wastes.				
(A)	Planning for the State facility systems with regard to solid and liquid wastes shall be directed towards the achievement of the following objectives:			
(1)	Maintenance of basic public health and sanitation standards relating to treatment and disposal of solid and liquid wastes.	X		
(2)	Provision of adequate sewerage facilities for physical and economic activities that alleviate problems in housing, employment, mobility, and other areas.			X
(B)	To achieve solid and liquid waste objectives, it shall be the policy of this State to:			
(1)	Encourage the adequate development of sewerage facilities that complement planned growth.			X
(2)	Promote re-use and recycling to reduce solid and liquid wastes and employ a conservation ethic.	X		
(3)	Promote research to develop more efficient and economical treatment and disposal of solid and liquid wastes.			X
Discussion: The proposed project supports the maintenance of basic public health and sanitation standards relating to treatment and disposal of liquid waste by promoting effluent reuse, which helps to preserve potable water sources for potable water needs.				
Section 226-16: Objective and Policies for Facility Systems – Water				
(A)	Planning for the State's facility system with regard to water shall be directed towards achievement of the objective of the provision of water to adequately accommodate domestic, agricultural, commercial, industrial, recreational, and other needs within resource capacities.	X		
(B)	To achieve the facility systems water objective, it shall be the policy of this State to:			
(1)	Coordinate development of land use activities with existing and potential water supply.	X		
(2)	Support research and development of alternative methods to meet future water requirements well in advance of anticipated needs.	X		
(3)	Reclaim and encourage the productive use of runoff water and wastewater discharges.	X		
(4)	Assist in improving the quality, efficiency, service, and storage capabilities of water systems for domestic and agricultural use.	X		
(5)	Support water supply services to areas experiencing critical water problems.	X		
(6)	Promote water conservation programs and practices in government, private industry, and the general public to help ensure adequate water to meet long-term needs.			X
Discussion: The proposed project is in coordination with existing and proposed land use activities, supports the development of an alternative water resource, facilitates the productive reuse of wastewater, and enhances the recycled water system to supply non-potable water to meet non-potable demands in the arid Kihei area.				
Section 226-17: Objectives for Facility Systems – Transportation.				
(A)	Planning for the State's facility systems with regard to transportation shall be directed towards the achievement of the following objectives:			

HAWAII STATE PLAN, HAWAII REVISED STATUTES, CHAPTER 226		S	N/S	N/A
S = Supportive, N/S = Not Supportive, N/A = Not Applicable				
(1)	An integrated multi-modal transportation system that services statewide needs and promotes the efficient, economical, safe, and convenient movement of people and goods.			X
(2)	A statewide transportation system that is consistent with and will accommodate planned growth objectives throughout the State.			X
Section 226-18: Objectives for Facility Systems – Energy.				
(A) Planning for the State’s facility systems with regard to energy shall be directed toward the achievement of the following objectives, giving due consideration to all:				
(1)	Dependable, efficient, and economical statewide energy systems capable of supporting the needs of the people;			X
(2)	Increased energy security and self-sufficiency through the reduction and ultimate elimination of Hawaii’s dependence on imported fuels for electrical generation and ground transportation;			X
(3)	Greater diversification of energy generation in the face of threats to Hawaii’s energy supplies and systems;			X
(4)	Reduction, avoidance, or sequestration of greenhouse gas emissions from energy supply and use; and			X
(5)	Utility models that make the social and financial interests of Hawaii’s utility customers a priority.			X
Section 226-18.5: Objectives for Facility Systems – Telecommunications.				
Planning for the State’s telecommunications facility systems shall be directed towards the achievement of dependable, efficient, and economical statewide telecommunications systems capable of supporting the needs of the people.				X
Section 226-19: Objectives for Socio-Cultural Advancement – Housing.				
(A) Planning for the State’s socio-cultural advancement with regard to housing shall be directed toward achievement of the following objectives:				
(1)	Greater opportunities for Hawaii’s people to secure reasonably priced, safe, sanitary, and livable homes, located in suitable environments that satisfactorily accommodate the needs and desires of families and individuals, through collaboration and cooperation between government and nonprofit and for-profit developers to ensure that more affordable housing is made available to very low-, low- and moderate-income segments of Hawaii’s population.			X
(2)	The orderly development of residential areas sensitive to community needs and other land uses.			X
(3)	The development and provision of affordable rental housing by the State to meet the housing needs of Hawaii’s people.			X
Section 226-20: Objectives for Socio-Cultural Advancement – Health.				
(A) Planning for the State’s socio-cultural advancement with regard to health shall be directed towards achievement of the following objectives:				
(1)	Fulfillment of basic individual health needs of the general public.			X
(2)	Maintenance of sanitary and environmentally healthful conditions in Hawaii’s communities.			X
(3)	Elimination of health disparities by identifying and addressing social determinants of health.			X
Section 226-21: Objective for Socio-Cultural Advancement – Education.				
Planning for the State’s socio-cultural advancement with regard to education shall be directed towards achievement of the objective of the provision of a variety of educational opportunities to enable individuals to fulfill their needs, responsibilities, and aspirations.				X

HAWAII STATE PLAN, HAWAII REVISED STATUTES, CHAPTER 226	S	N/S	N/A
S = Supportive, N/S = Not Supportive, N/A = Not Applicable			
Section 226-22: Objective for Socio-Cultural Advancement – Social Services.			
Planning for the State’s socio-cultural advancement with regard to social services shall be directed towards the achievement of the objective of improved public and private social services and activities that enable individuals, families, and groups to become more self-reliant and confident to improve their well-being.			X
Section 226-23: Objective for Socio-Cultural Advancement – Leisure.			
Planning for the State’s socio-cultural advancement with regard to leisure shall be directed towards the achievement of the objective of the adequate provision of resources to accommodate diverse cultural, artistic, and recreational needs for present and future generations.			X
Section 226-24: Objective for Socio-Cultural Advancement – Individual Rights and Personal Well-Being.			
Planning for the State’s socio-cultural advancement with regard to individual rights and personal well-being shall be directed towards achievement of the objective of increased opportunities and protection of individual rights to enable individuals to fulfill their socio-economic needs and aspirations.			X
Section 226-25: Objective for Socio-Cultural Advancement – Culture.			
Planning for the State’s socio-cultural advancement with regard to culture shall be directed toward the achievement of the objective of enhancement of cultural identities, traditions, values, customs, and arts of Hawaii’s people.			X
Section 226-26: Objectives for Socio-Cultural Advancement – Public Safety.			
(A) Planning for the State’s socio-cultural advancement with regard to public safety shall be directed towards the achievement of the following objectives:			
(1) Assurance of public safety and adequate protection of life and property for all people.			X
(2) Optimum organizational readiness and capability in all phases of emergency management to maintain the strength, resources, and social and economic well-being of the community in the event of civil disruptions, wars, natural disasters, and other major disturbances.			X
(3) Promotion of a sense of community responsibility for the welfare and safety of Hawaii’s people.			X
Section 226-27: Objectives for Socio-Cultural Advancement – Government.			
(A) Planning the state’s socio-cultural advancement with regard to government shall be directed towards the achievement of the following objectives:			
(1) Efficient, effective, and responsive government services at all levels in the State.			X
(2) Fiscal integrity, responsibility, and efficiency in the state government and county governments.			X
Hawaii State Plan – HRS Ch. 226 – Part III. Priority Guidelines			
226-101 Purpose.			
The purpose of this part is to establish overall priority guidelines to statewide concern.			
226-102 Overall Direction			
The State shall strive to improve the quality of life for Hawaii’s present and future population through the pursuit of desirable courses of action in seven major areas of statewide concern which merit priority attention: economic development, population growth and land resource management, affordable housing, crime and criminal justice, quality education, principles of sustainability, and climate change adaptation.			
226-103 Economic Priority Guidelines.			
(A) To Stimulate economic growth and encourage business expansion and development to provide needed jobs for Hawaii’s people and achieve a stable and diversified economy			X

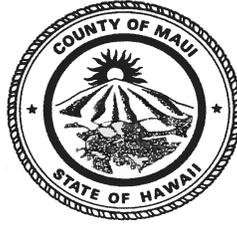

HAWAII STATE PLAN, HAWAII REVISED STATUTES, CHAPTER 226		S	N/S	N/A
S = Supportive, N/S = Not Supportive, N/A = Not Applicable				
(B)	Priority guidelines to promote the economic health and quality of the visitor industry			X
(C)	Priority guidelines to promote the continued viability of the sugar and pineapple industries			X
(D) Priority guidelines to promote the growth and development of diversified agriculture and aquaculture:				
(1)	Identify, conserve, and protect agricultural and aquacultural lands of importance and initiate affirmative and comprehensive programs to promote economically productive agricultural and aquacultural uses of such lands.			X
(2)	Assist in providing adequate, reasonably priced water for agricultural activities.	X		
(3)	Encourage public and private investment to increase water supply and to improve transmission, storage, and irrigation facilities in support of diversified agriculture and aquaculture.			X
(4)	Assist in the formation and operation of production and marketing associations and cooperatives to reduce production and marketing costs.			X
(5)	Encourage and assist with the development of a waterborne and airborne freight and cargo system capable of meeting the needs of Hawaii's agricultural community.			X
(6)	Seek favorable freight rates for Hawaii's agricultural products from interisland and overseas transportation operators.			X
(7)	Encourage the development and expansion of agricultural and aquacultural activities which offer long-term economic growth potential and employment opportunities.			X
(8)	Continue the development of agricultural parks and other programs to assist small independent farmers in securing agricultural lands and loans.			X
(9)	Require agricultural uses in agricultural subdivisions and closely monitor the uses in these subdivisions.			X
(10)	Support the continuation of land currently in use for diversified agriculture.			X
(11)	Encourage residents and visitors to support Hawaii's farmers by purchasing locally grown food and food products.			X
(E) Priority guidelines for water use and development:				
(1)	Maintain and improve water conservation programs to reduce the overall water consumption rate.			X
(2)	Encourage the improvement of irrigation technology and promote the use of nonpotable water for agricultural and landscaping purposes.	X		
(3)	Increase the support for research and development of economically feasible alternative water sources.			X
(4)	Explore alternative funding sources and approaches to support future water development programs and water system improvements.			X
(F)	Priority guidelines for energy use and development			X
(G)	Priority guidelines to promote the development of the information industry			X
Discussion: The proposed project promotes the growth and development of diversified agriculture by provision of a reasonably priced alternative water source. With respect to water use and development, the proposed project promotes the use of non-potable water for agricultural and landscaping purposes.				
Section 226-104: Population Growth and Land Resources Priority Guidelines.				
(A)	Priority guidelines to effect desired statewide growth and distribution			X
(B)	Priority guidelines for regional growth distribution and land resource utilization			X
Section 226-105: Crime and Criminal Justice.				
	Priority guidelines in the area of crime and criminal justice			X
Section 226-106: Affordable Housing.				
	Priority guidelines for the provision of affordable housing			X
Section 226-107: Quality Education.				
	Priority guidelines to promote quality education			X

HAWAII STATE PLAN, HAWAII REVISED STATUTES, CHAPTER 226		S	N/S	N/A
S = Supportive, N/S = Not Supportive, N/A = Not Applicable				
Section 226-108: Sustainability.				
(A) Priority guidelines and principles to promote sustainability shall include:				
(1)	Encouraging balanced economic, social, community, and environmental priorities;	X		
(2)	Encouraging planning that respects and promotes living within the natural resources and limits of the State;	X		
(3)	Promoting a diversified and dynamic economy;			X
(4)	Encouraging respect for the host culture;			X
(5)	Promoting decisions based on meeting the needs of the present without compromising the needs of future generations;			X
(6)	Considering the principles of the ahupuaa system; and			X
(7)	Emphasizing that everyone, including individuals, families, communities, businesses, and government, has the responsibility for achieving a sustainable Hawaii.			X
Discussion: The use of recycled water supports sustainability by encouraging balanced economic and environmental priorities, and respects and promotes living within available water resources.				
Section 226-109: Climate Change Adaptation Priority Guidelines.				
(A) Priority guidelines to prepare the State to address the impacts of climate change, including impacts to the areas of agriculture; conservation lands; coastal and nearshore marine areas; natural and cultural resources; education; energy; higher education; health; historic preservation; water resources; the built environment, such as housing, recreation, transportation; and the economy shall:				
(1)	Ensure that Hawaii's people are educated, informed, and aware of the impacts climate change may have on their communities;			X
(2)	Encourage community stewardship groups and local stakeholders to participate in planning and implementation of climate change policies;			X
(3)	Invest in continued monitoring and research of Hawaii's climate and the impacts of climate change on the State;			X
(4)	Consider native Hawaiian traditional knowledge and practices in planning for the impacts of climate change;			X
(5)	Encourage the preservation and restoration of natural landscape features, such as coral reefs, beaches and dunes, forests, streams, floodplains, and wetlands, that have the inherent capacity to avoid, minimize, or mitigate the impacts of climate change;			X
(6)	Explore adaptation strategies that moderate harm or exploit beneficial opportunities in response to actual or expected climate change impacts to the natural and built environments;			X
(7)	Promote sector resilience in areas such as water, roads, airports, and public health, by encouraging the identification of climate change threats, assessment of potential consequences, and evaluation of adaptation options;	X		
(8)	Foster cross-jurisdictional collaboration between county, state, and federal agencies and partnerships between government and private entities and other nongovernmental entities, including nonprofit entities;			X
(9)	Use management and implementation approaches that encourage the continual collection, evaluation, and integration of new information and strategies into new and existing practices, policies, and plans; and			X
(10)	Encourage planning and management of the natural and built environments that effectively integrate climate change policy.			X
Discussion: The proposed project supports climate change adaptation by promoting reuse of a water resource that would otherwise be disposed, and thereby preserves potable water resources for potable water needs.

Dear Ms. Malinge:

**SUBJECT: DRAFT ENVIRONMENTAL ASSESSMENT FOR THE SOUTH MAUI
RECYCLED WATER SYSTEM EXPANSION PROJECT, 2ND 1.0 MG
TANK AND PIPELINE IMPROVEMENTS, TMK 2-2-024:010 &
2-2-002:075, KIHEI, MAUI**

Thank you for the opportunity to review the Draft Environmental Assessment for the South Maui Recycled Water System Expansion project. This Department supports the proposed project as it will increase the availability of water for current park resources and allow for future expansion of irrigation systems in the Kihei parks.

We look forward to reviewing the project as it proceeds. Feel free to contact me or Robert Halvorson, Chief of Planning and Development, at 270-7931, should you have any questions.

Sincerely,

A handwritten signature in black ink, appearing to read "Ka'ala Buenconsejo", is written over a faint circular stamp.
